

RAC 03 Super HD Rear View Mirror Dash Cam

The RAC 03 is a forward facing dash cam which has built-in GPS tracking, a 'world first' for a rear view mirror camera, and a state of the art technology Ambarella AL750 chip. Suitable for any vehicle, the RAC 03 is loaded with driver-friendly features which include Lifetime Safety Camera and Speed Alerts, a Forward Collision and Lane Diversion Warning System and video recording capability in Super HD 1296p.

How does the RAC 03 work?

The RAC 03 records video onto a micro SD card, which is fitted into a slot on the camera.

The amount of video stored depends on the size of SD card being used – the RAC 03 can support SD cards with a capacity up to 64GB. As a guide, when recording in amazing Super HD, 5 minutes of video uses about 1GB of space on the SD card.

The RAC 03 records in segments, the length of which is pre-set to 3 minutes, but can be adjusted using the simple menu functions of the camera.

When the SD card is full, the RAC 03 which operates on a loop recording system, overwrites the oldest recording and continues to record without the need to erase or download any data.

Key Features

GPS Tracking – Records and stores a vehicle’s speed and location which is available for viewing when played back through a PC.

ProofCam Mapping Software - Displays GPS information using Google Maps.

Video Recording - Super HD quality 2304 x 1296 at 30fps with the latest H.264 technology.

Discreet Recording - The video display screen incorporated in the mirror, turns off after a short time so that the driver’s view is not interrupted – in the background the camera is recording everything on the road ahead.

Lifetime Safety Camera + Speed Alerts - Activated using the built-in GPS. When a vehicle approaches a speed or safety camera, an alert notifies the driver of the vehicle’s distance to the camera, the current speed limit and the vehicle’s current speed.

Forward Collision Warning System - A smart feature which monitors the distance between your vehicle and those ahead. If the distance is too close an alert will sound from the camera.

Lane Diversion Warning System - The camera can detect white lines on the road ahead, and if a slow diversion is detected then an alert will sound to notify the driver.

Microphone and Speaker - Sounds and conversations can be recorded, if required. If not, a simple one touch button will mute the microphone.

Emergency Button - When pressed, the current sector of a recording becomes protected, and will not be lost when the camera continues recording.

The RAC 03 can be powered using the supplied power cable connected to a vehicle’s 12 volt power socket or hard-wired by our partner, Chameleon.
