

Introducing Modular Power Revitalization Service

Now extend the reliable life of your modular UPS.

As your critical infrastructure ages, it is exposed to more risk and unexpected issues or downtime due to aging components. An important part of the product services life cycle is to understand your available options. This will help ensure you are maintaining your critical infrastructure while also maximizing your investment.

3 benefits of Revitalization Service:

- 1 Reduce total cost of ownership through upgrades and proactive replacement of parts.
- 2 Have peace of mind knowing your aging infrastructure is protected and operating at manufacturer's specifications.
- 3 Reduce downtime and make fewer service calls due to proactive replacement of wearing components.

Maintain your critical infrastructure while maximizing your investment.

Modular Power Revitalization Service (MPRS)

MPRS is an affordable service approach designed to extend the reliable life of a modular uninterruptible power supply (UPS). MPRS renews the internal components of a UPS at a more favorable price point than replacing each component individually.

MPRS includes:

- > Updates to the latest system technologies available
- > Installation of critical modular components
- > Environmentally responsible disposal of old components
- > One-year Advantage Service Plan
