

DESIGNED FOR THE CLASSROOM

The Fizzbook Spin is the first mini-tablet PC for children designed with a measured and thoughtful approach to understanding the real needs of education. The Fizzbook Spin wasn't born in a lab, but rather purposely conceived through real research carried out with real teachers and children in classrooms all over the world. The Spin's researchers travelled to schools and spent time living with and observing the interactions between students, their peers and siblings, teachers, parents and school administrators.

The result is a potential revolution in classroom learning. Collaboration, development, understanding and retention are all significantly improved and with the inclusion of Smartboard classroom software, free of charge, the Fizzbook Spin from Zoostorm is the natural choice for all forward thinking schools looking to implement an effective learning technology solution.

WHAT MAKES THE FIZZBOOK SPIN SO DIFFERENT?

- The Fizzbook Spin features a durable, child proof construction and rugged outer case, drop tested to 50 cm.
- The Fizzbook Spin offers a dual mode use for students. In tablet mode students can use their fingers or stylus to interact with the touch screen, or in traditional laptop mode students can type and use the mouse touch pad like they would any laptop computer.
- When open like a traditional laptop, the screen swivels 180 degrees for sharing with peers and teachers
- The palm resting feature on the touch screen ignores the hands resting on the screen, allowing students to write and draw with the stylus naturally.
- The built-in camera rotates 180 degrees giving students a new way to interact with their world
- The in-built carrying handle combined with the lightweight and compact size makes the Fizzbook Spin ultra mobile inside and outside the classroom
- Water-resistant keyboard
- Education-specific features and touch-optimized software
- The theft deterrent chip locks the Fizzbook Spin down for use only within range of your school wireless network.

FREE SOFTWARE FOR LEARNING

Every Fizzbook Spin comes installed with a suite of software designed to help children learn, collaborate and work more effectively using both the touch screen and laptop features of the Spin. Every Fizzbook Spin includes:

- Windows XP Home (Upgrade options available)
- SMART Classroom Learning Suite 2009
- Microsoft Works 9
- Art Rage 2
- ArcSoft Webcam Companion 3
- Evernote
- Intel My Storage
- Intel Quick Launcher
- Intel Power Manager
- MyScript Stylus
- Adobe Reader 9

With SMART Classroom Suite you can build assessment into your lesson as it progresses, and easily monitor and control the students use of their Fizzbook:

SMART Notebook Student Edition: Share Notebook files, schedule homework, and submit files for assessment.

SMART Response: All the power of the Senteo voting system as software on the Fizzbook.

SMART Sync 2009: See, control and share the screen of every Fizzbook in the class from your own PC or SmartBoard.
