Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows, Windows 95, 98, Me, NT, 2000, XP, Vista, 7 and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

- We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

- Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

Firmware & Tools Updates

- Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

<http://www.DrayTek.com>

Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.

Part I Installation

Installation

This part will introduce Vigor router and guide to install the device in hardware and software.

I-1 Introduction

This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

Vigor2915 series integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

By adopting hardware-based VPN platform and hardware encryption of AES/DES/3DES, the router increases the performance of VPN greatly, and offers several protocols (such as IPSec/PPTP/L2TP) with VPN tunnels.

The object-based design used in SPI (Stateful Packet Inspection) firewall allows users to set firewall policy with ease. CSM (Content Security Management) provides users control and management in IM (Instant Messenger) and P2P (Peer to Peer) more efficiency than before. By the way, DoS/DDoS prevention and URL/Web content filter strengthen the security outside and control inside. Object-based firewall is flexible and allows your network be safe.

User Management implemented on your router firmware can allow you to prevent any computer from accessing your Internet connection without a username or password. You can also allocate time budgets to your employees within office network.

With the 6-port Gigabit switch on the LAN side provides extremely high speed connectivity for the highest speed local data transfer of any server or local PCs. The tagged VLANs (IEEE802.1Q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is tag-based Multi-subnet (Multiple-Private LAN Subnets).

On the Wireless-equipped models (Vigor2915ac/n-plus/Vn/Vn-plus/ac/Vac) each of the wireless SSIDs can also be grouped within one of the VLANs.

In addition, Vigor2915 series supports USB interface for connecting USB printer to share printing function or 3G USB modem for network connection.

Vigor2915 series provides two-level management to simplify the configuration of network connection. The user mode allows user accessing into WEB interface via simple configuration. However, if users want to have advanced configurations, they can access into WEB interface through admin mode.

I-1-1 Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

I-1-1-1 For Vigor2915

LED	Status	Explanation
ACT	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
Internet	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
W2/P4	On	The WAN/LAN port is connected.
	Off	The WAN/LAN port is disconnected.
	Blinking	The data is transmitting.
P3-P1	On	The LAN port is connected.
	Off	The LAN port is disconnected.
	Blinking	The data is transmitting.
W1	On	The WAN port is connected.
	Off	The WAN port is disconnected.
	Blinking	The data is transmitting.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.

Interface	Description
PWR	Connector for a power cord.
ON/OFF	Power Switch.
USB	Connector for a USB device (for 3G/4G USB Modem or printer or Environmental Thermometer).
W1	Connector for local network devices or modem for accessing Internet.
P1-P3	Connecters for local network devices.
W2/P4	The function of this connector is adjustable and controlled by web user interface. It can perform the job as a WAN port (for accessing Internet) or as a LAN port (for local network devices).
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.

I-1-1-2 For Vigor2915F

LED	Status	Explanation
ACT	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
Internet	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
W2/P4	On	The WAN/LAN port is connected.
	Off	The WAN/LAN port is disconnected.
	Blinking	The data is transmitting.
P3~P1	On	The LAN port is connected.
	Off	The LAN port is disconnected.
	Blinking	The data is transmitting.
W1	On	SFP module is plugged and the fiber link is up.
	Off	SFP module is unplugged or the fiber link is down.
	Blinking	The data is transmitting.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.

Interface	Description
PWR	Connector for a power cord.
ON/OFF	Power Switch.
USB	Connector for a USB device (for 3G/4G USB Modem or printer or Environmental Thermometer).
W1	Fiber connection (1G) for accessing the Internet. 
P1~P3	Connecters for local network devices.
W2/P4	The function of this connector is adjustable and controlled by web user interface. It can perform the job as a WAN port (for accessing Internet) or as a LAN port (for local network devices).
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.

I-1-1-3 For Vigor2915ac

LED	Status	Explanation
ACT	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
Internet	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
W2/P4	On	The WAN/LAN port is connected.
	Off	The WAN/LAN port is disconnected.
	Blinking	The data is transmitting.
P3~P1	On	The LAN port is connected.
	Off	The LAN port is disconnected.
	Blinking	The data is transmitting.
W1	On	The WAN port is connected.
	Off	The WAN port is disconnected.
	Blinking	The data is transmitting.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WISPr	On	Wi-Fi WAN connected.
	Off	Wi-Fi WAN disconnected.
	Blinking	The data is transmitting.
2.4G/5G	On	Wireless access point with bandwidth of 2.4GHz/5GHz is ready.
	Blinking	It will blink slowly while wireless traffic goes through. ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)

Interface	Description
PWR	Connector for a power cord.
ON/OFF	Power Switch.
USB	Connector for a USB device (for 3G/4G USB Modem or printer or Environmental Thermometer).
W1	Connector for local network devices or modem for accessing Internet.
P1-P3	Connecters for local network devices.
W2/P4	The function of this connector is adjustable and controlled by web user interface. It can perform the job as a WAN port (for accessing Internet) or as a LAN port (for local network devices).
Wireless LAN ON/OFF/WPS	Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.

I-1-1-4 For Vigor2915Fac

LED	Status	Explanation
ACT	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
Internet	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
W2/P4	On	The WAN/LAN port is connected.
	Off	The WAN/LAN port is disconnected.
	Blinking	The data is transmitting.
P3-P1	On	The LAN port is connected.
	Off	The LAN port is disconnected.
	Blinking	The data is transmitting.
W1	On	SFP module is plugged and the fiber link is up.
	Off	SFP module is unplugged or the fiber link is down.
	Blinking	The data is transmitting.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WISPr	On	Wi-Fi WAN connected.
	Off	Wi-Fi WAN disconnected.
	Blinking	The data is transmitting.
2.4G/5G	On	Wireless access point with bandwidth of 2.4GHz/5GHz is ready.
	Blinking	It will blink slowly while wireless traffic goes through. ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)

Interface	Description
PWR	Connector for a power cord.
ON/OFF	Power Switch.
USB	Connector for a USB device (for 3G/4G USB Modem or printer or Environmental Thermometer).
W1	Fiber connection (1G) for accessing the Internet. 
P1-P3	Connectors for local network devices.
W2/P4	The function of this connector is adjustable and controlled by web user interface. It can perform the job as a WAN port (for accessing Internet) or as a LAN port (for local network devices).
Wireless LAN ON/OFF/WPS	Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.

I-2 Hardware Installation

I-2-1 Installing Vigor Router

Before starting to configure the router, you have to connect your devices correctly. In this section, Vigor2915ac is taken as an example.

1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
2. Connect one end of an Ethernet cable (RJ-45) to one of the LAN ports (P1~P4) of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
4. Power on the device by pressing down the power switch on the rear panel.
5. The system starts to initiate. After completing the system test, the ACT LED will light up and start blinking.

I-2-2 Wall-Mounted Installation

Vigor router has keyhole type mounting slots on the underside.

1. A template is provided on the Vigor router packaging box to enable you to space the screws correctly on the wall.
2. Place the template on the wall and drill the holes according to the recommended instruction.
3. Fit screws into the wall using the appropriate type of wall plug.

Note

The recommended drill diameter shall be 6.5mm (1/4").

4. When you finished about procedure, the router has been mounted on the wall firmly.

I-2-3 Installing USB Printer to Vigor Router

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows 7. For other Windows system, please visit www.DrayTek.com.

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

1. Connect the printer with the router through USB/parallel port.
2. Open All Programs>>Getting Started>>Devices and Printers.

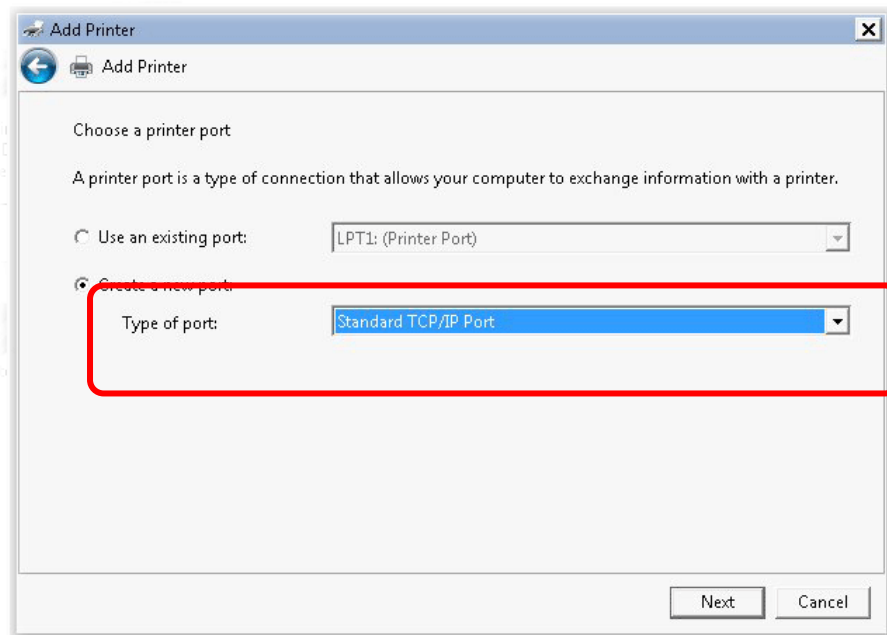

3. Click Add a printer.

4. A dialog will appear. Click **Add a local printer** and click **Next**.

5. In this dialog, choose **Create a new port**. In the field of **Type of port**, use the drop down list to select **Standard TCP/IP Port**. Then, click **Next**.

6. In the following dialog, type 192.168.1.1 (router's LAN IP) in the field of Hostname or IP Address and type 192.168.1.1 as the Port name. Then, click Next.

The screenshot shows the 'Add Printer' dialog box. The title bar says 'Add Printer'. Below the title bar is a back arrow and a printer icon with the text 'Add Printer'. The main area contains the text 'Type a printer hostname or IP address'. There are three input fields: 'Device type:' with a dropdown menu showing 'TCP/IP Device', 'Hostname or IP address:' with the text '192.168.1.1', and 'Port name:' with the text '192.168.1.1'. A red rectangular box highlights the 'Hostname or IP address' and 'Port name' fields. Below these fields is a checkbox labeled 'Query the printer and automatically select the driver to use' which is unchecked. At the bottom right, there are two buttons: 'Next' and 'Cancel'.

7. Click Standard and choose Generic Network Card.

The screenshot shows the 'Add Printer' dialog box with an error message. The title bar says 'Add Printer'. Below the title bar is a back arrow and a printer icon with the text 'Add Printer'. The main area contains the text 'Additional port information required'. Below this is the text 'The device is not found on the network. Be sure that:'. There is a list of four points: 1. The device is turned on, 2. The network is connected, 3. The device is properly configured, 4. The address on the previous page is correct. Below the list is the text 'If you think the address is not correct, click Back to return to the previous page. Then correct the address and perform another search on the network. If you are sure the address is correct, select the device type below.'. There are two radio buttons: 'Standard' (which is selected) and 'Custom'. Next to the 'Custom' radio button is a button labeled 'Settings...'. Below the radio buttons is a dropdown menu showing 'Generic Network Card'. A red rectangular box highlights the 'Standard' radio button and the dropdown menu. At the bottom right, there are two buttons: 'Next' and 'Cancel'.

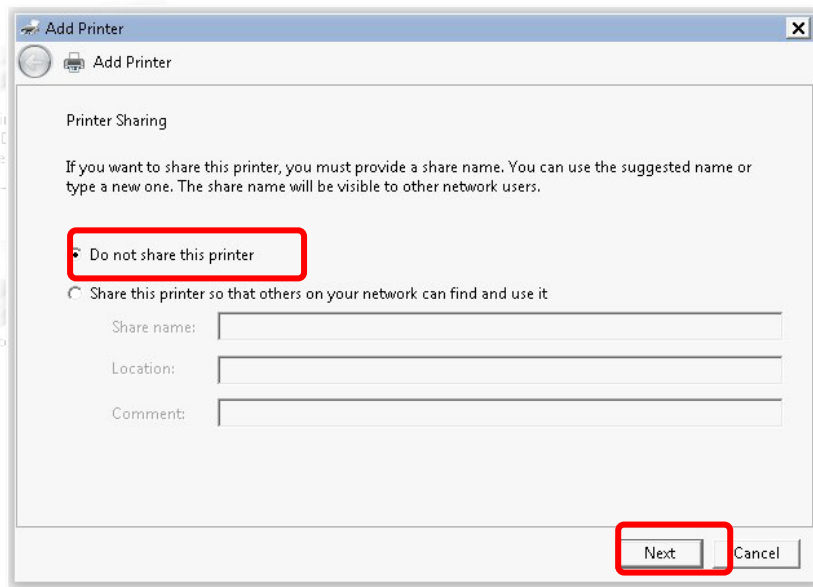

8. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

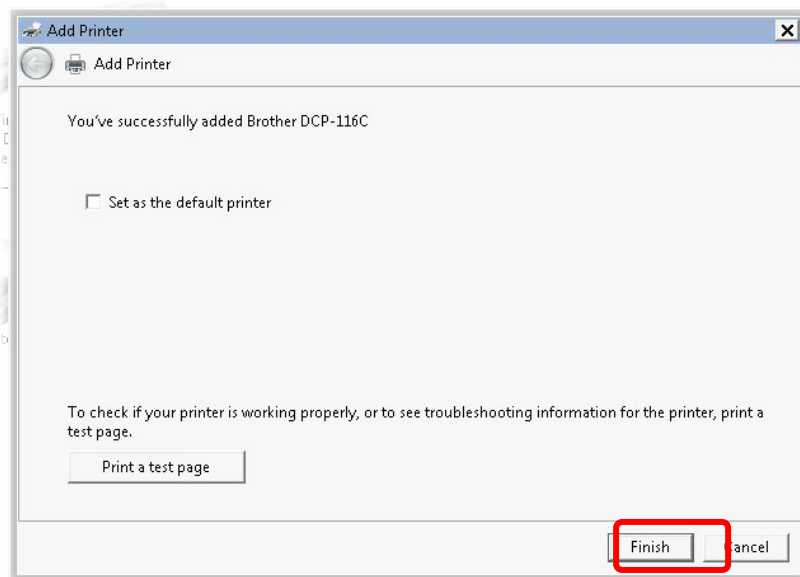

9. Type a name for the chosen printer. Click **Next**.

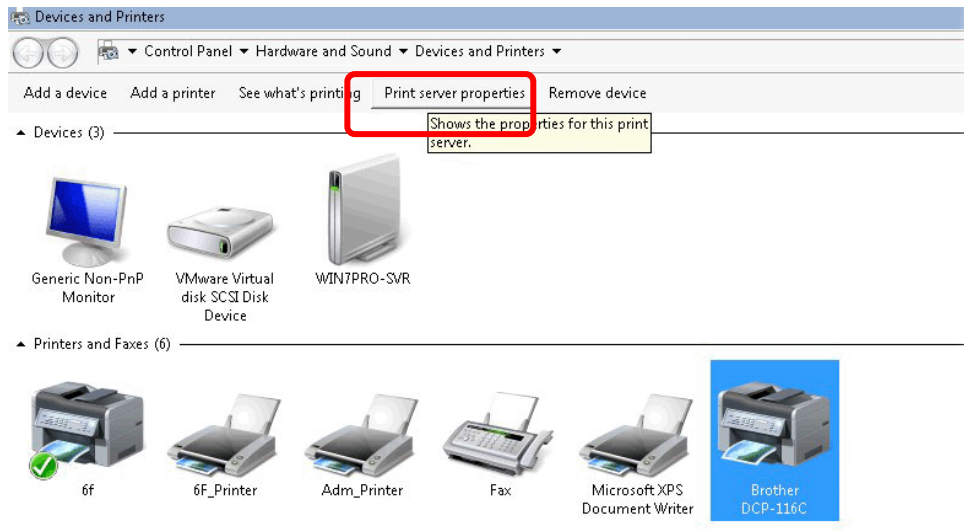

10. Choose **Do not share this printer** and click **Next**.

11. Then, in the following dialog, click **Finish**.

12. The new printer has been added and displayed under **Printers and Faxes**. Click the new printer icon and click **Printer server properties**.

13. Edit the property of the new printer you have added by clicking **Configure Port**.

14. Select "LPR" on Protocol, type p1 (number 1) as Queue Name. Then click OK. Next please refer to the red rectangle for choosing the correct protocol and LPR name.

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

Info

Some printers with the fax/scanning or other additional functions are not supported.
Vigor router supports printing request from computers via LAN ports but not WAN port.

I-3 Accessing Web Page

1. Make sure your PC connects to the router correctly.
You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as the **default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.
2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

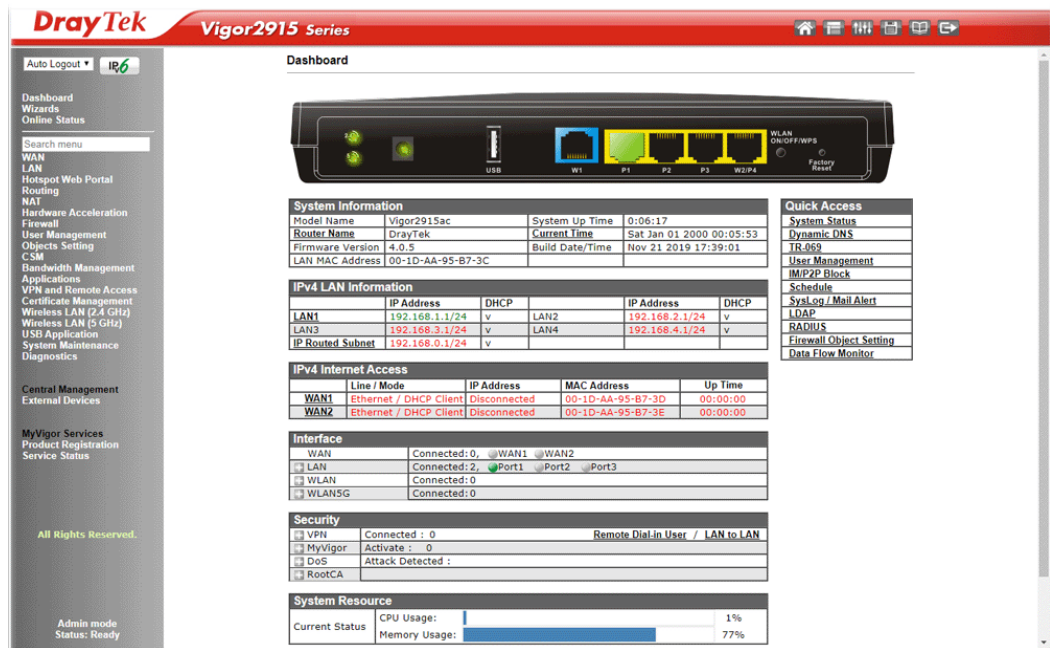

3. Please type "admin/admin" as the Username/Password and click Login.

Info

If you fail to access to the web configuration, please go to "Trouble Shooting" for detecting and solving your problem.

- Now, the Main Screen will appear. Take Vigor2915ac as an example.

Info

The home page will be different slightly in accordance with the type of the router you have.

- The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

I-4 Changing Password

Please change the password for the original security of the router.

1. Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
2. Please type "admin/admin" as Username/Password for accessing into the web user interface with admin mode.
3. Go to **System Maintenance** page and choose **Administrator Password**.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	<input type="text"/>	Max: 83 characters
New Password	<input type="text"/>	Max: 83 characters
Confirm Password	<input type="text"/>	Max: 83 characters
<input checked="" type="checkbox"/>	Enable 'admin' account login to Web UI from the Internet	
<input type="checkbox"/>	Use only advanced authentication method for Admin "WAN" login	
<input checked="" type="radio"/>	Mobile one-Time Passwords(mOTP)	
PIN Code	<input type="text"/>	Secret <input type="text"/>
<input type="radio"/>	2-Step Authentication	
Send Auth code via		
<input type="checkbox"/>	SMS Profile <input type="text"/>	Recipient Number <input type="text"/>
<input type="checkbox"/>	Mail Profile <input type="text"/>	Mail Address <input type="text"/>

Note:

Password can contain only a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()

4. Enter the login password (the default is "admin") on the field of **Old Password**. Enter **New Password** and **Confirm Password**. Then click **OK** to continue.

Info

The maximum length of the password you can set is 23 characters.

5. Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

The image shows the login page for a DrayTek Vigor2915 Series router. At the top, there is a red banner with the DrayTek logo and "Vigor2915 Series". Below the banner, the word "Login" is displayed in a black box. The main area contains two input fields: "Username" with the value "admin" and "Password" with masked characters "••••". A "Login" button is positioned below the password field. A security warning message reads: "Security Warning: You are logging in without encryption which is not recommended. To login securely [click here](#)." At the bottom, there is a copyright notice: "Copyright © 2000-2019 DrayTek Corp. All Rights Reserved."

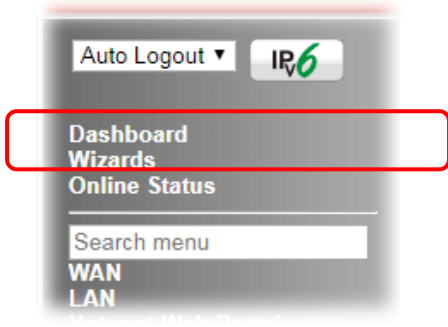

Info

Even the password is changed, the Username for logging onto the web user interface is still "admin".

I-5 Dashboard

Dashboard shows the connection status including System Information, IPv4 Internet Access, IPv6 Internet Access, Interface (physical connection), Security and Quick Access.

Click **Dashboard** from the main menu on the left side of the main page.

A web page with default selections will be displayed on the screen. Refer to the following figure:

Dashboard

System Information			
Model Name	Vigor2915ac	System Up Time	0:06:17
Router Name	DrayTek	Current Time	Sat Jan 01 2000 00:05:53

Data Flow Monitor	

I-5-1 Virtual Panel

On the top of the Dashboard, a virtual panel (simulating the physical panel of the router) displays the physical interface connection. It will be refreshed every five seconds. When you move and click the mouse cursor on WAN or LAN, related web setting page will be open for you to configure if required.

Port	Color	Description
Ethernet Port (WAN/LAN)	Black	It means such port is disconnected.
	Green	It means such port is connected (with Giga transmission rate, 1Gbps) physically.
	Orange	It means such port is connected (with 10/100 Mbps) physically.

For detailed information about the LED display, refer to I-1-1 LED Indicators and Connectors.

I-5-2 Name with a Link

A name with a link (e.g., [Router Name](#), [Current Time](#), [WAN1~3](#) and etc.) below means you can click it to open the configuration page for modification.

System Information				Quick Access			
Model Name	Vigor2915ac	System Up Time	0:05:17	System Status			
Router Name	DrayTek	Current Time	Sat Jan 01 2000 00:05:53	Dynamic DNS			
Firmware Version	4.0.5	Build Date/Time	Nov 21 2019 17:39:01	TR-069

I-5-3 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. However, some **important** and **common** used menu items which can be accessed in a quick way just for convenience.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under **Quick Access**.

Quick Access
System Status
Dynamic DNS
TR-069
User Management
IM/P2P Block
Schedule
SysLog / Mail Alert
LDAP
RADIUS
Firewall Object Setting
Data Flow Monitor

The function links of System Status, Dynamic DDNS, TR-069, User Management, IM/P2P Block, Schedule, Syslog/Mail Alert, LDAP, RADIUS, Firewall Object Setting and Data Flow Monitor are displayed here. Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

In addition, quick access for VPN security settings such as Remote Dial-in User and LAN to LAN are located on the bottom of this page. Scroll down the page to find them and use them if required.

Interface	
WAN	Connected: 0, <input type="radio"/> WAN1 <input type="radio"/> WAN2
<input type="checkbox"/> LAN	Connected: 2, <input checked="" type="radio"/> Port1 <input type="radio"/> Port2 <input type="radio"/> Port3

USB	Connected : 0, <input type="radio"/> USB 1						

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

I-5-4 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

GUI Map

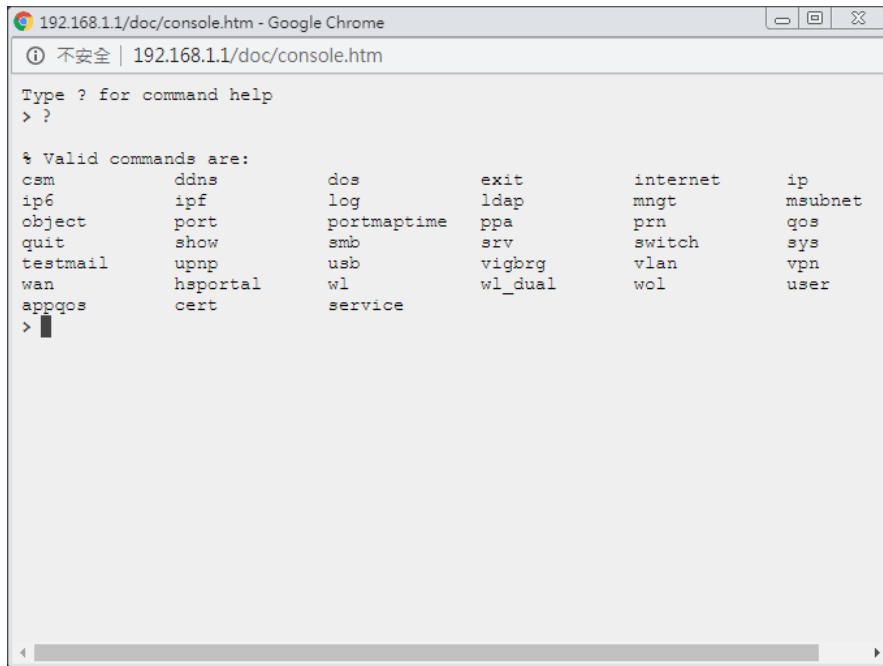

Dashboard Wizard	Quick Start Wizard Service Activation Wizard VPN Client Wizard VPN Server Wizard Wireless Wizard	Certificate Management	Local Certificate Trusted CA Certificate Certificate Backup
Online Status	Physical Connection Virtual WAN	Wireless LAN (2.4 GHz)	General Setup Security Access Control WPS Advanced Setting AP Discovery Airtime Fairness Roaming Station List Station Control Bandwidth Management
WAN	General Setup Internet Access Multi-VLAN WAN Budget		
LAN	General Setup VLAN Bind IP to MAC	Wireless LAN (5 GHz)	General Setup Security

I-5-5 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the **Web Console** icon on the top of the main screen to open the following screen.

I-5-6 Config Backup

There is one way to store current used settings quickly by clicking the **Config Backup** icon. It allows you to backup current settings as a file. Such configuration file can be restored by using System Maintenance>>Configuration Backup.

I-5-7 Manual Download

Click this icon to open online user's guide of Vigor router. This document offers detailed information for the settings on web user interface.

I-5-8 Logout

Click this icon to exit the web user interface.

I-5-9 Online Status

I-5-9-1 Physical Connection

Such page displays the physical connection status such as LAN connection status, WAN connection status, ADSL information, and so on.

Physical Connection for IPv4 Protocol

Online Status

Detailed explanation (for IPv4) is shown below:

Item	Description
LAN Status	<p>Primary DNS - Displays the primary DNS server address for WAN interface.</p> <p>Secondary DNS - Displays the secondary DNS server address for WAN interface.</p> <p>IP Address - Displays the IP address of the LAN interface.</p> <p>TX Packets - Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets - Displays the total received packets at the LAN interface.</p>
WAN1/WAN2 Status	<p>Enable - Yes in red means such interface is available but not enabled. Yes in green means such interface is enabled.</p> <p>Line - Displays the physical connection (Ethernet, or USB) of this interface.</p> <p>Name - Display the name of the router.</p> <p>Mode - Displays the type of WAN connection (e.g., PPPoE).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>GW IP - Displays the IP address of the default gateway.</p> <p>TX Packets - Displays the total transmitted packets at the WAN interface.</p> <p>TX Rate - Displays the speed of transmitted octets at the WAN interface.</p> <p>RX Packets - Displays the total number of received packets at the WAN interface.</p> <p>RX Rate - Displays the speed of received octets at the WAN interface.</p>

Detailed explanation (for IPv6) is shown below:

Item	Description
LAN Status	<p>IP Address - Displays the IPv6 address of the LAN interface..</p> <p>TX Packets - Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets - Displays the total received packets at the LAN interface.</p> <p>TX Bytes - Displays the speed of transmitted octets at the LAN interface.</p> <p>RX Bytes - Displays the speed of received octets at the LAN interface.</p>
WAN IPv6 Status	<p>Enable - No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in red means such interface is not available.</p> <p>Mode - Displays the type of WAN connection (e.g., TSPC).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>Gateway IP - Displays the IP address of the default gateway.</p>

Info

The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

I-5-9-2 Virtual WAN

Such page displays the virtual WAN connection information.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

I-6 Quick Start Wizard

Quick Start Wizard can help you to deploy and use the router easily and quickly. Go to **Wizards>>Quick Start Wizard**. The first screen of **Quick Start Wizard** is entering login password. After typing the password, please click **Next**.

Quick Start Wizard

Enter login password

Please enter an alpha-numeric string as your **Password** (Max 23 characters).

Old Password

New Password

Confirm Password

Hint: If you want to keep the password unchanged, leave the password blank and press "Next" button to skip this process.

On the next page as shown below, please select the WAN interface that you use. If fiber is used, please choose WAN1; if Ethernet is used, please choose WAN1/WAN2. Then click **Next** for next step.

Quick Start Wizard

WAN Interface

WAN Interface:

Display Name:

Physical Mode: Ethernet

WAN1 and WAN2 will bring up different configuration page. Refer to the following for detailed information.

I-6-1 For WAN1/WAN2

If you choose WAN2, you can specify physical type to fit your request. Then, click Next.

Quick Start Wizard

WAN Interface

WAN Interface:	WAN2 ▾
Display Name:	<input type="text"/>
Physical Mode:	Ethernet ▾
Physical Type:	Auto negotiation ▾

On the next page as shown below, please select the appropriate Internet access type according to the information from your ISP. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. Then click Next for next step.

PPPoE

1. Choose WAN1/WAN2 as the WAN Interface and click the Next button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 2
Select one of the following Internet Access types provided by your ISP.
<input checked="" type="radio"/> PPPoE
<input type="radio"/> PPTP
<input type="radio"/> L2TP
<input type="radio"/> Static IP
<input type="radio"/> DHCP

- Click PPPoE as the Internet Access Type. Then click **Next** to continue.

Quick Start Wizard

PPPoE Client Mode

WAN 2
Enter the user name and password provided by your ISP.

Service Name (Optional)

Username

Password

Confirm Password

Available settings are explained as follows:

Item	Description
Service Name (Optional)	Enter the description of the specific network service.
Username	Assign a specific valid user name provided by the ISP. Note: The maximum length of the user name you can set is 63 characters.
Password	Assign a valid password provided by the ISP. Note: The maximum length of the password you can set is 62 characters.
Confirm Password	ReEnter the password.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. Please manually enter the Username/Password provided by your ISP. Click **Next** for viewing summary of such connection.

Quick Start Wizard

Please confirm your settings:

WAN Interface:	WAN2
Physical Mode:	Ethernet
Internet Access:	PPPoE

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

< Back

Next >

Finish

Cancel

4. Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

PPTP/L2TP

1. Choose WAN1/WAN2 as the WAN Interface and click the Next button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 2
Select one of the following Internet Access types provided by your ISP.

PPPoE
 PPTP
 L2TP
 Static IP
 DHCP

2. Click PPTP/L2TP as the Internet Access Type. Then click Next to continue.

Quick Start Wizard

PPTP Client Mode

WAN 2
Enter the username, password, WAN IP configuration and PPTP server IP provided by your ISP.

< Back Next > Finish Cancel

2. Click **DHCP** as the Internet Access type. Simply click **Next** to continue.

Quick Start Wizard

DHCP Client Mode

WAN 2
If your ISP requires you to enter a specific host name or specific MAC address, please enter it in.

Host Name (optional)

MAC (optional)

Available settings are explained as follows:

Item	Description
Host Name	Enter the name of the host. Note: The maximum length of the host name you can set is 39 characters.
MAC	Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to enter the MAC address.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

3. After finished the settings above, click **Next** for viewing summary of such connection.

Quick Start Wizard

Please confirm your settings:

WAN Interface: WAN2
Physical Mode: Ethernet
Internet Access: DHCP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

4. Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

I-7 Service Activation Wizard

Service Activation Wizard can guide you to activate WCF service (Web Content Filter) with a quick and easy way. For the Service Activation Wizard is only available for admin operation, therefore, please type "admin/admin" on Username/Password while Logging into the web user interface.

Service Activation Wizard is a tool which allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>. For using Web Content Filter Profile, please refer to later section **Web Content Filter Profile** for detailed information.

Now, follow the steps listed below to activate WCF feature for your router.

Info

Such function is available only for Admin Mode.

1. Open Wizards>>Service Activation Wizard.

2. In the following page, you can activate the Web content filter services and Dynamic DNS Service at the same time or individually. When you finish the selection, please click Next.

Service Activation Wizard

Select the service type that you want to activate

Activation Date : 2019-01-21

Web Content Filter(WCF) Service :

BPjM [License Agreement](#)
This is a web content filter that is provided by the German government. It is a free service without any guarantee and will expire one year after activation. You may re-activate the service after expiry.

Cyren 30-Days Free Trial [License Agreement](#)
This is a worldwide web content filter service. The free trail license can only be used once. At the end of the free trail period you may purchase the official one-year Cyren Web Content Filter from an authorized DrayTek reseller.

Dynamic DNS(DDNS) Service :

DT-DDNS [License Agreement](#)
This Dynamic Domain Name service is provided by DrayTek Corporation. To activate the DrayDDNS (Global) service, please select this option to activate the license. This is a 1-year free license key. For re-activation after expiry, you have to obtain a new license from MyVigor website (<https://myvigor.draytek.com>).

I agree to let the MyVigor server record the WAN or Internet IP address of this router in order to activate the DrayDDNS service.
You can stop this service and clear your IP address at any time.

Domain Name : .draydns.com

I have read and accept the above Agreement. (Please check this box).

Info

BPjM is web content filter (WCF) for German Speaking users. It is ideal for your family to provide more Internet security for youngsters.

Cryan 30-day trial is WCF which offers 30-day trial period. After trial, you can purchase DrayTek's prepared Cryan GlobalView WCF package from retailing outlets.

DT-DDNS, developed by DrayTek, offers one year free charge service of dynamic DNS service for internal use.

3. Setting confirmation page will be displayed as follows, please click **Activate**.

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
Service Activated : Web Content Filter (Cyren / Commtouch)

Please click **Back** to re-select service type you to activate.

< Back **Activate** Cancel

Info

The service will be activated and applied as the default rule configured in Firewall>>General Setup.

4. Now, the web page will display the service that you have activated according to your selection(s). The valid time for the free trial of these services is one month.

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter	2019-02-01	2019-03-03	Cyren
DDNS	2019-02-01	2020-02-01	DT-DDNS

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

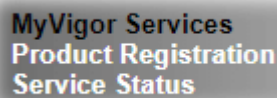

I-8 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

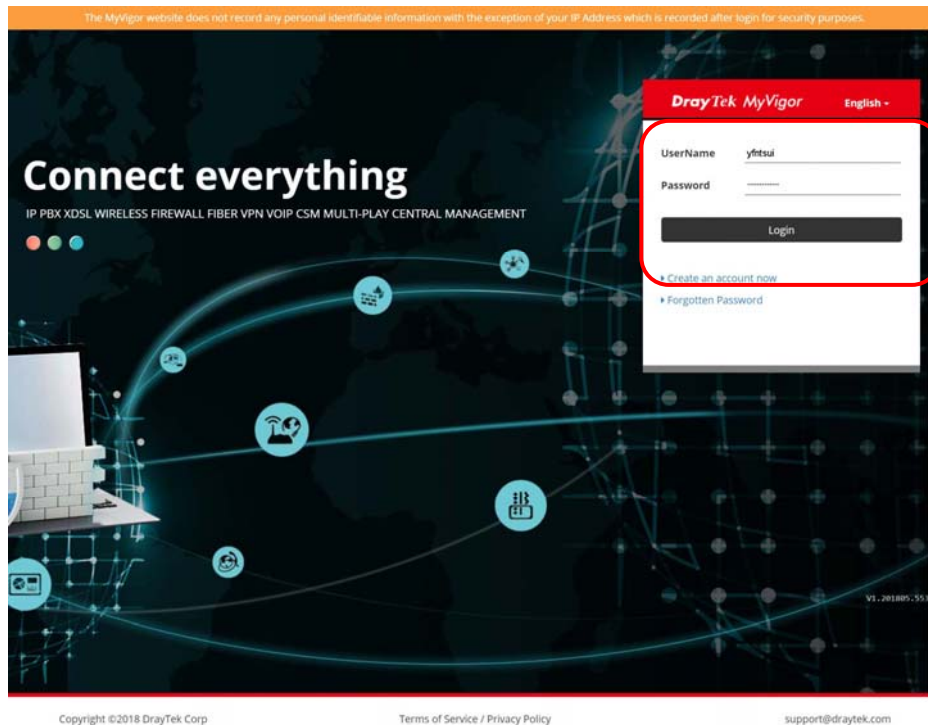

- 1 Please login the web configuration interface of Vigor router by typing "admin/admin" as User Name / Password.

- 2 Click MyVigor Services>>Production Registration from the home page.

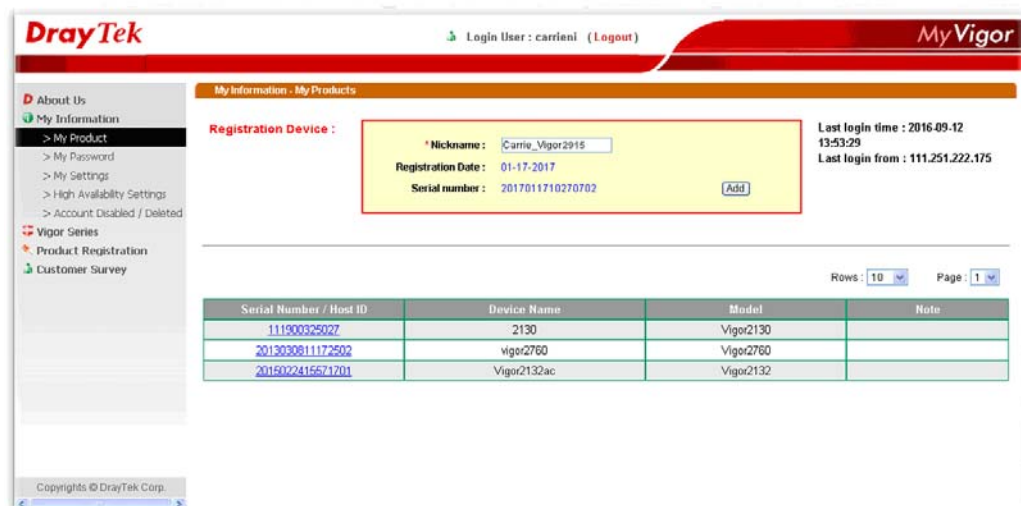

- 3 A **Login** page will be shown on the screen. Please Enter the account and password that you created previously. And click **Login**.

Info

If you haven't an accessing account, please refer to section Creating an Account for MyVigor to create your own one. Please read the articles on the Agreement regarding user rights carefully while creating a user account.

- The following page will be displayed after you logging in MyVigor. Type a nickname for the router, then click Add.

- 5 When the following page appears, your router information has been added to the database.

Your device has been successfully added to the database.

- 6 After clicking OK, you will see the following page. Your router has been registered to myvigor website successfully.

The screenshot shows the MyVigor website interface. The top navigation bar includes the DrayTek logo, the login user 'carrieni', and the MyVigor logo. The left sidebar contains navigation options: About Us, My Information (selected), My Product, My Password, My Settings, High Availability Settings, Account Disabled / Deleted, Vigor Series, and Customer Survey. The main content area is titled 'My Information - My Products' and displays a table of registered devices. The table has four columns: Serial Number / Host ID, Device Name, Model, and Note. The last login time is 2016-09-12 13:53:29, and the last login from IP is 111.251.222.175. The table shows four rows of device information, with the last row (Vigor2915) highlighted by a red box.

Serial Number / Host ID	Device Name	Model	Note
111900325027	2130	Vigor2130	
2013030811172502	vigor2760	Vigor2760	
2015030413341201	Vigor2915	Vigor2915	
2015030413341201	Vigor2926	Vigor2926	

This page is left blank.

Part II Connectivity

WAN

It means wide area network. Public IP will be used in WAN.

LAN

It means local area network. Private IP will be used in LAN. Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

NAT

When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network.

Applications

DDNS, LAN DNS, IGMP, LDAP, UPnP, WOL, RADIUS, SMS, Bonjour,

Routing

Static Route, Load-Balance/Route Policy,

II-1 WAN

It allows users to access Internet.

Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255
From 172.16.0.0 to 172.31.255.255
From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Network Connection by 3G/4G USB Modem

For 3G/4G mobile communication through Access Point is popular more and more, Vigor2915 adds the function of 3G/4G network connection for such purpose. By connecting 3G USB Modem to the USB port of Vigor2915, it can support HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G/4G standard (HSUPA, etc). Vigor2915ac with 3G/4G USB Modem allows you to receive 3G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use four LAN ports on the router to access Internet. Also, they can access Internet via 802.11n wireless function of Vigor2915ac, and enjoy the powerful firewall, bandwidth management, VPN features of Vigor2915ac series.

After connecting into the router, 3G/4G USB Modem will be regarded as the third WAN port. However, the original WAN1 and WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G/4G USB Modem in WAN3 also can be used as backup device. Therefore, when WAN1 and WAN2 are not available, the router will use 3.5G for supporting automatically. The supported 3G/4G USB Modem will be listed on DrayTek web site. Please visit www.draytek.com for more detailed information.

Web User Interface

II-1-1 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1 and WAN2 in details.

This router supports dual-WAN function. It allows users to access Internet and combine the bandwidth of the WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, Even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation.

This webpage allows you to set general setup for WAN interface.

Load Balance Mode:

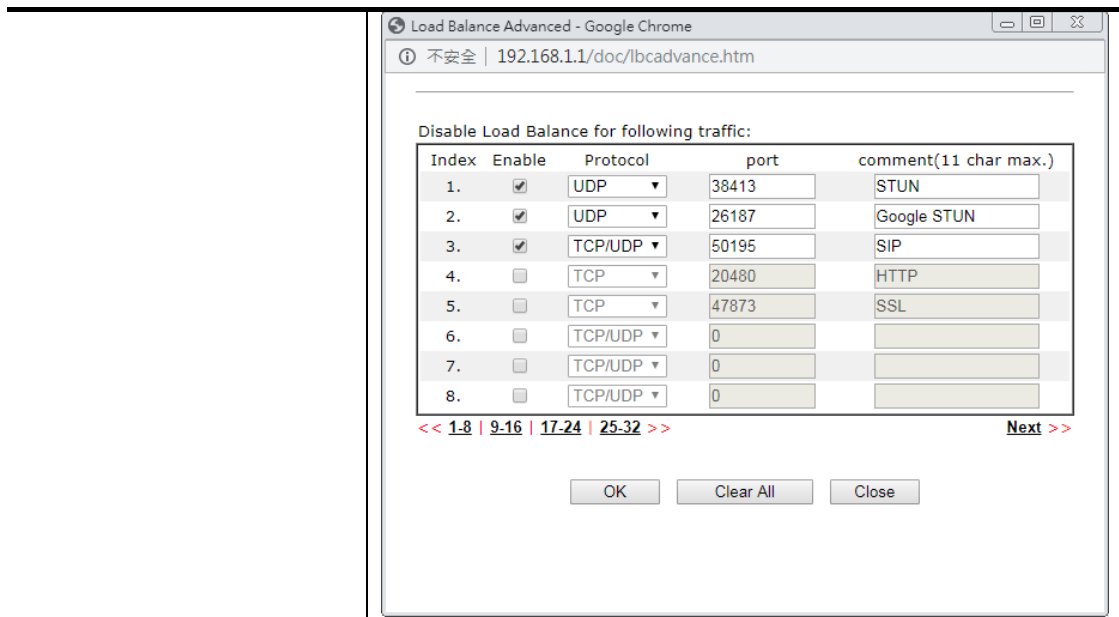

Index	Enable	Physical Mode/Type	Line Speed(Kbps) DownLink/UpLink	Active Mode	Load Balance
WAN1	<input checked="" type="checkbox"/>	Ethernet/Auto negotiation	0 / 0	Always On	V
WAN2	<input checked="" type="checkbox"/>	Ethernet/Auto negotiation	0 / 0	Always On	V

Note:

1. The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.
2. When WAN2 is not Ethernet, P4 port will be used as LAN.

Available settings are explained as follows:

Item	Description
Load Balance Mode	This option is available for multiple-WAN for getting enough bandwidth for each WAN port. If you know the practical bandwidth for your WAN interface, please choose the setting of According to Line Speed . Otherwise, please choose Auto Weight to let the router reach the best load balance.
IP Based	IP Based - The same source / destination IP pair will select the same WAN interface as policy. It is the default setting. If you have no strong demand about speed test result, keep default settings as IP based.
Sesseion Based	All of the WAN interfaces will be used (as out-going WAN) for passing through new sessions to get better transmission speed. Though good speed test result for throughput might be reached; however, some web site may not open smoothly, especially the site need authentication, e.g., FTP.
Advance	Click it to open the following dialog for configuring settings of protocol, port and comment.

Index	Click the WAN interface link under Index to access into the WAN configuration page.
Enable	V means such WAN interface is enabled and ready to be used.
Physical Mode / Type	Display the physical mode (Fiber, Ethernet, Wireless 2.4G, Wireless 5G or USB) and physical type of the WAN interface.
Line Speed(Kbps) DownLink/UpLink	Display the downstream and upstream rate of such WAN interface.
Active Mode	Display whether such WAN interface is Active device or backup device.
Load Balance	V means the function of load balance for such WAN interface is enabled.

Info In default, each WAN port is enabled.

After finished the above settings, click OK to save the settings.

II-1-1-1 WAN1 (Fiber)

When fiber is used for network connection, click WAN1 to get the following page.

WAN >> General Setup

WAN 1

Enable:	Yes ▾	
Display Name:	<input type="text"/>	
Physical Mode:	Fiber	
Physical Type(Fiber):	Auto ▾	
Line Speed(Kbps):		
DownLink	<input type="text" value="0"/>	
UpLink	<input type="text" value="0"/>	
VLAN Tag insertion :	Disable ▾	
Tag value:	<input type="text" value="0"/>	(0~4095)
Priority:	<input type="text" value="0"/>	(0~7)
Active Mode:	Failover ▾	Load Balance: <input checked="" type="checkbox"/>
	<input type="radio"/> WAN Failure <input type="radio"/> Traffic Threshold	
	Upload	User defined ▾ <input type="text" value="OK"/> bps (Default unit: K)
	Download	User defined ▾ <input type="text" value="OK"/> bps (Default unit: K)
Active When:	<input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2	

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
Enable	Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface.
Display Name	Enter the description for such WAN interface.
Physical Mode	Display the physical mode of such WAN interface.
Physical Type	You can change the physical type or choose Auto negotiation for determined by the system.
Line Speed	If you choose According to Line Speed as the Load Balance Mode , please Enter the line speed for downloading and uploading for such WAN interface. The unit is kbps.
VLAN Tag insertion	<p>Enable - Enable the function of VLAN with tag. The router will add specific VLAN number to all packets on the WAN while sending them out. Please Enter the tag value and specify the priority for the packets sending by WAN1.</p> <p>Disable - Disable the function of VLAN with tag.</p> <p>Tag value - Enter the value as the VLAN ID number. The range is form 0 to 4095.</p> <p>Priority - Enter the packet priority number for such VLAN. The range is from 0 to 7.</p>
Active Mode	<p>Choose Always On to make the WAN connection be activated always.</p> <p>Load Balance: Check this box to enable auto load balance function for such WAN interface.</p> <p>When the data traffic is large, the WAN interface with the</p>

	<p>function enabled will balance the data transmission automatically among all of the WAN interfaces in connection status.</p> <p>Failover - Choose it to make the WAN connection as a backup connection.</p> <ul style="list-style-type: none"> ● WAN Failure - When the active WAN failed, such WAN will be activated as the main network connection. ● Traffic Threshold - When the data traffic of active WAN reaches the traffic threshold (specified here), the failover WAN will be enabled automatically to share the overloaded data traffic.
Active When	If you choose Failover as the Active Mode , Active When will appear. Please specify which WAN will be the Backup interface.

After finished the above settings, click OK to save the settings.

II-1-1-2 WAN1/WAN2 (Ethernet)

The WAN2 interface can be specified as Ethernet, Wireless 2.4G, Wireless 5G, or USB.

When Ethernet is used for network connection, click WAN1. Or click WAN2 and select Ethernet as the Physical Mode to get the following page.

WAN >> General Setup

WAN 2

Enable:	<input type="checkbox"/> Yes
Display Name:	<input type="text"/>
Physical Mode:	<input type="text" value="Ethernet"/>
Physical Type:	<input type="text" value="Auto negotiation"/>
Line Speed(Kbps):	
DownLink	<input type="text" value="0"/>
UpLink	<input type="text" value="0"/>
VLAN Tag insertion :	<input type="text" value="Enable"/>
Tag value:	<input type="text" value="0"/> (0~4095)
Priority:	<input type="text" value="0"/> (0~7)
Active Mode:	<input type="text" value="Failover"/> Load Balance: <input checked="" type="checkbox"/>
	<input checked="" type="radio"/> WAN Failure <input type="radio"/> Traffic Threshold
	Upload <input type="text" value="User defined"/> <input type="text" value="OK"/> bps (Default unit: K)
	Download <input type="text" value="User defined"/> <input type="text" value="OK"/> bps (Default unit: K)
Active When:	<input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
------	-------------

Enable	Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface.
Display Name	Enter the description for such WAN interface.
Physical Mode	Choose Ethernet for such WAN interface.
Physical Type	You can change the physical type or choose Auto negotiation for determined by the system.
Line Speed	If you choose According to Line Speed as the Load Balance Mode , please Enter the line speed for downloading and uploading for such WAN interface. The unit is kbps.
VLAN Tag insertion	<p>Enable - Enable the function of VLAN with tag. The router will add specific VLAN number to all packets on the WAN while sending them out. Please Enter the tag value and specify the priority for the packets sending by WAN1.</p> <p>Disable - Disable the function of VLAN with tag.</p> <p>Tag value - Enter the value as the VLAN ID number. The range is form 0 to 4095.</p> <p>Priority - Enter the packet priority number for such VLAN. The range is from 0 to 7.</p>
Active Mode	<p>Choose Always On to make the WAN connection be activated always.</p> <p>Load Balance: Check this box to enable auto load balance function for such WAN interface. When the data traffic is large, the WAN interface with the function enabled will balance the data transmission automatically among all of the WAN interfaces in connection status.</p> <p>Failover - Choose it to make the WAN connection as a backup connection.</p> <ul style="list-style-type: none"> ● WAN Failure - When the active WAN failed, such WAN will be activated as the main network connection. ● Traffic Threshold - When the data traffic of active WAN reaches the traffic threshold (specified here), the failover WAN will be enabled automatically to share the overloaded data traffic.
Active When	If you choose Failover as the Active Mode , Active When will appear. Please specify which WAN will be the Backup interface.

After finished the above settings, click **OK** to save the settings.

II-1-1-3 WAN2 (Wireless LAN 2.4G / 5G)

To use WLAN WAN connection, please configure WAN2 interface and choose Wireless 2.4G or Wireless 5G as the Physical Mode.

WAN >> General Setup

WAN 2

Enable:	Yes ▾
Display Name:	<input type="text"/>
Physical Mode:	Wireless 2.4G ▾
Line Speed(Kbps):	Ethernet
DownLink	Wireless 2.4G
UpLink	Wireless 5G
Active Mode:	Failover ▾
	Load Balance: <input checked="" type="checkbox"/>
	<input type="radio"/> WAN Failure
	<input type="radio"/> Traffic Threshold
	Upload <input type="text" value="User defined"/> <input type="text" value="0K"/> bps (Default unit: K)
	Download <input type="text" value="User defined"/> <input type="text" value="0K"/> bps (Default unit: K)
Active When:	<input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
Enable	Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface.
Display Name	Enter the description for such WAN interface.
Physical Mode	Choose Ethernet for such WAN interface.
Line Speed	If you choose According to Line Speed as the Load Balance Mode , please Enter the line speed for downloading and uploading for such WAN interface. The unit is kbps.
Active Mode	Choose Always On to make the WAN connection be activated always. Load Balance: Check this box to enable auto load balance function for such WAN interface. When the data traffic is large, the WAN interface with the function enabled will balance the data transmission automatically among all of the WAN interfaces in connection status. Failover - Choose it to make the WAN connection as a backup connection. <ul style="list-style-type: none"> ● WAN Failure - When the active WAN failed, such WAN will be activated as the main network connection. ● Traffic Threshold - When the data traffic of active WAN reaches the traffic threshold (specified here), the failover WAN will be enabled automatically to share the overloaded data traffic.
Active When	If you choose Failover as the Active Mode , Active When will appear. Please specify which WAN will be the Backup interface.

After finished the above settings, click **OK** to save the settings.

II-1-1-4 WAN2 (USB)

To use 3G/4G network connection through 3G/4G USB Modem, please configure WAN2 interface and choose USB as the Physical Mode.

WAN >> General Setup

WAN 2

Enable:	Yes ▾
Display Name:	<input type="text"/>
Physical Mode:	USB ▾

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
Enable	Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface.
Display Name	Enter the description for such WAN interface.
Physical Mode	Choose USB.

After finished the above settings, click **OK** to save the settings.

II-1-2 Internet Access

For the router supports dual-WAN function, the users can set different WAN settings (for WAN1/WAN2) for Internet Access. Due to different Physical Mode for WAN interface, the Access Mode for these connections also varies. Refer to the following figures for examples.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode	Details Page	IPv6
WAN1		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN2		Ethernet	Static or Dynamic IP	Details Page	IPv6

DHCP Client Option

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode	Details Page	IPv6
WAN1		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN2		Wireless 2.4G	Static or Dynamic IP	Details Page	IPv6

DHCP Client Option

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode	Details Page	IPv6
WAN1		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN2		USB	None	Details Page	IPv6

DHCP Client Option

Available settings are explained as follows:

Item	Description
Index	Display the WAN interface.
Display Name	It shows the name of the WAN interface that entered in general setup.
Physical Mode	It shows the physical connection for WAN interface according to the real network connection.
Access Mode	Use the drop down list to choose a proper access mode. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings.
Details Page	This button will open different web page (based on IPv4) according to the access mode that you choose in WAN interface.
IPv6	This button will open different web page (based on Physical Mode) to setup IPv6 Internet Access Mode for WAN

	<p>interface.</p> <p>If IPv6 service is active on this WAN interface, the color of "IPv6" will become green.</p>
<p>DHCP Client Option</p>	<p>This button allows you to configure DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and configured.</p> <p>WAN >> Internet Access</p>  <p>Note:</p> <ol style="list-style-type: none"> Option 12 is reserved. You cannot configure it here, but you can configure it in "Router Name" field of "WAN >> Internet Access >> Details Page". Option 55 is reserved and configured with value 1, 3, 6, 15 and 212, also 33 and 121 for some models. Configuring option 61 here will override the setting in "WAN >> Internet Access" page's DHCP Client Identifier field. <p>Enable/Disable - Enable/Disable the function of DHCP Option. Each DHCP option is composed by an option number with data. For example, Option number: 100 Data: abcd</p> <p>When such function is enabled, the specified values for DHCP option will be seen in DHCP reply packets.</p> <p>Interface - Specify the WAN interface(s) that will be overwritten by such function.</p> <p>Option Number - Type a number for such function.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.</p> </div> <p>DataType - Choose the type (ASCII or Hex) for the data to be stored.</p> <p>Data - Enter the content of the data to be processed by the function of DHCP option.</p>

II-1-2-1 Details Page for PPPoE in WAN1/WAN2 (Physical Mode: Ethernet)

To use PPPoE as the accessing protocol of the internet, please click the PPPoE tab. The following web page will be shown.

WAN >> Internet Access

WAN 2

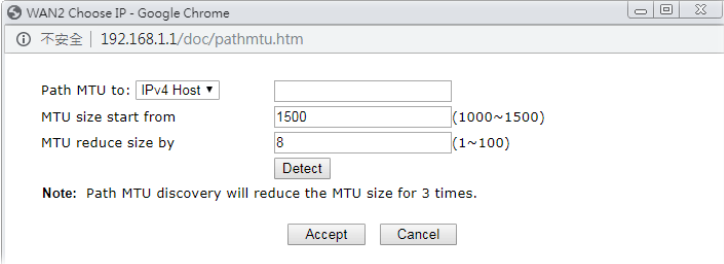

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable <input checked="" type="radio"/> Disable			
ISP Access Setup Username <input type="text"/> (Max: 63 characters) Password <input type="text"/> (Max: 62 characters) More Options <input type="button" value="+"/>		PPP/MP Setup PPP Authentication <input type="text" value="PAP or CHAP"/> Idle Timeout <input type="text" value="-1"/> second(s) IP Assignment (IPCP) <input type="radio"/> Static <input checked="" type="radio"/> Dynamic Fixed IP Address <input type="text"/> <input type="button" value="WAN IP Alias"/>	
WAN Connection Detection Mode <input type="text" value="PPP Detect"/>		Dial-Out Schedule Index(1-15) in <u>Schedule</u> Setup: => <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/>	
MTU <input type="text" value="1492"/> (Max:1492) <input type="button" value="Path MTU Discovery"/>		TTL <input checked="" type="checkbox"/> Change the TTL value <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Use the following MAC Address <input type="text" value="00"/> : <input type="text" value="1D"/> : <input type="text" value="AA"/> : <input type="text" value="93"/> : <input type="text" value="0D"/> : <input type="text" value="1E"/>	
<input type="button" value="OK"/> <input type="button" value="Cancel"/>			

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
 We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

Available settings are explained as follows:

Item	Description
Enable/Disable	Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid.
ISP Access Setup	Enter your allocated username, password and authentication parameters according to the information provided by your ISP. Username - Type in the username provided by ISP in this field. The maximum length of the user name you can set is 63 characters. Password - Type in the password provided by ISP in this field. The maximum length of the password you can set is 62 characters. More Options - It shows optional settings for configuration. <ul style="list-style-type: none"> ● Service Name (Optional) - Enter the description of the specific network service.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through PPP Detect or Ping Detect. Mode - Choose PPP Detect or Ping Detect for the system to execute for WAN detection. If you choose Ping Detect as the detection mode, you have to type required settings for the

	<p>following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP - If you choose Ping Detect as detection mode, you have to type Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP - If you choose Ping Detect as detection mode, you also can enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) - Set TTL value of PING operation. ● Ping Interval - Enter the interval for the system to execute the PING operation. ● Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
<p>MTU</p>	<p>It means Max Transmit Unit for packet.</p> <p>Path MTU Discovery - It is used to detect the maximum MTU size of a packet not to be segmented in specific transmit path.</p> <p>Click Detect to open the following dialog.</p>  <ul style="list-style-type: none"> ● Path MTU to - Enter the IP address as the specific transmit path. ● MTU reduce size by - It determines the decreasing size of MTU value. For example, the number specified in this field is "8". The maximum MTU size is "1500". After clicking the "detect" button, the system will calculate and get the suitable MTU value such as 1500, 1492, 1484 and etc., automatically. ● Detect - Click it to detect a suitable MTU value ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
<p>PPP/MP Setup</p>	<p>PPP Authentication - Select PAP only or PAP or CHAP for PPP.</p> <p>Idle Timeout - Set the timeout for breaking down the Internet after passing through the time without any action.</p> <p>IP Assignment (IPCP) - Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function.</p> <p>Fixed IP - Click Yes to use this function and type in a fixed IP address in the box of Fixed IP Address.</p> <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 32 public IP addresses other than the current one you are using. Enter the additional WAN</p>

	IP address and check the Enable box. Then click OK to exit the dialog.
Dial-Out Schedule	Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.
TTL	<p>Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router.</p> <ul style="list-style-type: none"> ● If enabled - TTL value will be reduced (-1) when it pass through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". ● If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP. <p>Default MAC Address - You can use Default MAC Address or specify another MAC address by typing on the boxes of MAC Address for the router.</p> <p>Specify a MAC Address - Enter the MAC address for the router manually.</p>

After finishing all the settings here, please click **OK** to activate them.

II-1-2-2 Details Page for Static or Dynamic IP in WAN1/WAN2 (Physical Mode: Ethernet)

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

WAN >> Internet Access

WAN 2

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input checked="" type="radio"/> Enable <input type="radio"/> Disable		Keep WAN Connection <input type="checkbox"/> Enable PING to keep alive PING to the IP <input style="width: 100px;" type="text"/> PING Interval <input style="width: 50px;" type="text"/> minute(s)

WAN Connection Detection Mode <input type="text" value="ARP Detect"/>		Bridge Mode <input type="checkbox"/> Enable Bridge Mode Bridge Subnet <input type="text" value="LAN 1"/>	
MTU <input style="width: 50px;" type="text" value="1500"/> <input type="button" value="Path MTU Discovery"/>		MAC Address <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Use the following MAC Address <input style="width: 100px;" type="text" value="00:1D:AA:93:0D:1E"/>	

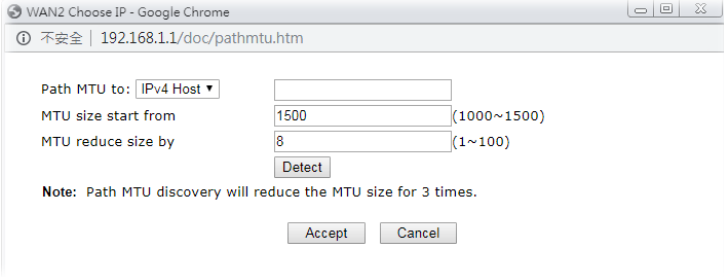

Note:

1. VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.
2. If enable firewall in bridge mode, IPv6 connection type would be change to DHCPv6 mode.
3. Bridge Subnet cannot be selected by Multi-WAN Interface at the same time.
4. If both Bridge Mode and Firewall are enabled, the settings under User Management will be ignored.

Available settings are explained as follows:

Item	Description
Enable / Disable	Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid.
IP Network Settings	This group allows you to obtain an IP address automatically and allows you type in IP address manually. Obtain an IP address automatically - Click this button to obtain the IP address automatically if you want to use Dynamic IP mode.

	<p>More Options - It shows optional settings for configuration.</p> <ul style="list-style-type: none"> ● Router Name: Type in the router name provided by ISP. ● Domain Name: Type in the domain name that you have assigned. ● Enable DHCP Client Identifier: Check the box to specify username and password as the DHCP client identifier for some ISP. ● Username: Type a name as username. The maximum length of the user name you can set is 63 characters. ● Password: Type a password. The maximum length of the password you can set is 62 characters. <p>Specify an IP address - Click this radio button to specify some data if you want to use Static IP mode.</p> <ul style="list-style-type: none"> ● IP Address: Enter the IP address. ● Subnet Mask: Enter the subnet mask. ● Gateway IP Address: Enter the gateway IP address. <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 32 public IP addresses other than the current one you are using.</p>
DNS Server IP Address	Type in the primary IP address for the router if you want to use Static IP mode. If necessary, type in secondary IP address for necessity in the future.
WAN Connection Detection	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p>Mode - Choose ARP Detect, Ping Detect or Always On for the system to execute for WAN detection. If you choose Ping Detect as the detection mode, you have to type required settings for the following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP - If you choose Ping Detect as detection mode, you have to type Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP - If you choose Ping Detect as detection mode, you also can enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) - Set TTL value of PING operation. ● Ping Interval - Enter the interval for the system to execute the PING operation. ● Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	<p>It means Max Transmit Unit for packet.</p> <p>Path MTU Discovery - It is used to detect the maximum MTU size of a packet not to be segmented in specific transmit path.</p> <p>Click Detect to open the following dialog.</p>

	 <ul style="list-style-type: none"> ● Path MTU to - Enter the IP address as the specific transmit path. ● MTU reduce size by - It determines the decreasing size of MTU value. For example, the number specified in this field is "8". The maximum MTU size is "1500". After clicking the "detect" button, the system will calculate and get the suitable MTU value such as 1500, 1492, 1484 and etc., automatically. ● Detect - Click it to detect a suitable MTU value ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
<p>Keep WAN Connection</p>	<p>Normally, this function is designed for Dynamic IP environments because some ISPs will drop connections if there is no traffic within certain periods of time. Check Enable PING to keep alive box to activate this function.</p> <ul style="list-style-type: none"> ● PING to the IP - If you enable the PING function, please specify the IP address for the system to PING it for keeping alive. ● PING Interval - Enter the interval for the system to execute the PING operation.
<p>TTL</p>	<p>Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router.</p> <ul style="list-style-type: none"> ● If enabled - TTL value will be reduced (-1) when it pass through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". ● If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.
<p>RIP Routing</p>	<p>Routing Information Protocol is abbreviated as RIP (RFC1058) specifying how routers exchange routing tables information. Click Enable RIP for activating this function.</p>
<p>Bridge Mode</p>	<p>Enable Bridge Mode - If the function is enabled, the router will work as a bridge modem.</p> <p>Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated.</p> <p>Bridge Subnet - Make a bridge between the selected LAN subnet and such WAN interface.</p>
<p>MAC Address</p>	<p>Default MAC Address: Click this radio button to use default MAC address for the router.</p> <p>Specify a MAC Address: Some Cable service providers specify a specific MAC address for access authentication. In</p>

such cases you need to click the Specify a MAC Address and enter the MAC address in the MAC Address field.

After finishing all the settings here, please click OK to activate them.

II-1-2-3 Details Page for PPTP/L2TP in WAN1/WAN2 (Physical Mode: Ethernet)

To use PPTP/L2TP as the accessing protocol of the internet, please click the PPTP/L2TP tab. The following web page will be shown.

WAN >> Internet Access

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
 We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

Available settings are explained as follows:

Item	Description
PPTP/L2TP	<p>Enable PPTP - Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Enable L2TP - Click this radio button to enable a L2TP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Disable - Click this radio button to close the connection through PPTP or L2TP.</p> <p>Server Address - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.</p> <p>Specify Gateway IP Address - Specify the gateway IP address for DHCP server.</p>
ISP Access Setup	<p>Username -Type in the username provided by ISP in this field. The maximum length of the user name you can set is 63 characters.</p> <p>Password -Type in the password provided by ISP in this field. The maximum length of the password you can set is 62 characters.</p> <p>Schedule Profile - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p>

Schedule Profile	Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.
MTU	<p>It means Max Transmit Unit for packet.</p> <p>Path MTU Discovery - It is used to detect the maximum MTU size of a packet not to be segmented in specific transmit path.</p> <p>Click Detect to open the following dialog.</p>  <ul style="list-style-type: none"> ● Path MTU to - Enter the IP address as the specific transmit path. ● MTU reduce size by- It determines the decreasing size of MTU value. For example, the number specified in this field is "8". The maximum MTU size is "1500". After clicking the "detect" button, the system will calculate and get the suitable MTU value such as 1500, 1492, 1484 and etc., automatically. ● Detect - Click it to detect a suitable MTU value ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
PPP Setup	<p>PPP Authentication - Select PAP only or PAP or CHAP for PPP.</p> <p>Idle Timeout - Set the timeout for breaking down the Internet after passing through the time without any action.</p>
IP Address Assignment Method(IPCP)	<p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 32 public IP addresses other than the current one you are using.</p> <p>Fixed IP - Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function. Click Yes to use this function and type in a fixed IP address in the box.</p> <p>Fixed IP Address -Type a fixed IP address.</p>
WAN IP Network Settings	<p>Obtain an IP address automatically - Click this button to obtain the IP address automatically.</p> <p>Specify an IP address - Click this radio button to specify some data.</p> <ul style="list-style-type: none"> ● IP Address - Enter the IP address. ● Subnet Mask - Enter the subnet mask.

After finishing all the settings here, please click **OK** to activate them.

II-1-2-4 Details Page for 3G/4G USB Modem (PPP mode) in WAN2

To use 3G/4G USB Modem (PPP mode) as the accessing protocol of the internet, please choose Internet Access from WAN menu.

II-1-2-7 Details Page for IPv6 – PPP in WAN1/WAN2

During the procedure of IPv4 PPPoE connection, we can get the IPv6 Link Local Address between the gateway and Vigor router through IPv6CP. Later, use DHCPv6 or accept RA to acquire the IPv6 prefix address (such as: 2001:B010:7300:200::/64) offered by the ISP. In addition, PCs under LAN also can have the public IPv6 address for Internet access by means of the generated prefix.

No need to type any other information for PPP mode.

WAN >> Internet Access

Info

At present, the IPv6 prefix can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

II-1-2-8 Details Page for IPv6 – TSPC in WAN1/WAN2

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
Internet Access Mode			
Connection Type		TSPC ▼	
TSPC Configuration			
Username		Max: 63 characters	
Password		Max: 63 characters	
Tunnel Broker			
WAN Connection Detection			
Mode		Ping Detect ▼	
Ping IP/Hostname			
TTL(1-255,0:Auto)		0	

Available settings are explained as follows:

Item	Description
Username	Enter the name obtained from the broker. It is suggested for you to apply another username and password for http://gogonet.gogo6.com/page/freenet6-account . The maximum length of the name you can set is 63 characters.
Password	Enter the password assigned with the user name. The maximum length of the name you can set is 19 characters.
Tunnel Broker	Enter the address for the tunnel broker IP, FQDN or an optional port number.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through Ping Detect. Mode - Choose Always On or Ping Detect for the system to execute for WAN detection. Always On means no detection will be executed. The network connection will be on always. <ul style="list-style-type: none"> ● Ping IP/Hostname - If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging. ● TTL (Time to Live) -If you choose Ping Detect as detection mode, you have to type TTL value.

After finished the above settings, click **OK** to save the settings.

II-1-2-9 Details Page for IPv6 – AICCU in WAN1/WAN2

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<p>Internet Access Mode Connection Type: <input type="text" value="AICCU"/></p> <p>AICCU Configuration <input type="checkbox"/> Always On Username: <input type="text" value="Max: 63 characters"/> Password: <input type="text" value="Max: 63 characters"/> Tunnel Broker: <input type="text" value="tic.sixxs.net"/> Tunnel ID: <input type="text"/> Subnet Prefix: <input type="text"/> / <input type="text"/></p> <p>WAN Connection Detection Mode: <input type="text" value="Ping Detect"/> Ping IP/Hostname: <input type="text"/> TTL(1-255,0:Auto): <input type="text" value="0"/></p>			

Note:

If "Always On" is not enabled, AICCU connection would only retry three times.

Available settings are explained as follows:

Item	Description
Always On	Check this box to keep the network connection always.
Username	Enter the name obtained from the broker. Please apply new account at http://www.sixxs.net/ . It is suggested for you to apply another username and password. The maximum length of the name you can set is 19 characters.
Password	Enter the password assigned with the user name. The maximum length of the password you can set is 19 characters.
Tunnel Broker	It means a server of AICCU. The server can provide IPv6 tunnels to sites or end users over IPv4. Enter the address for the tunnel broker IP, FQDN or an optional port number.
Tunnel ID	One user account may have several tunnels. And, each tunnel shall have one specified tunnel ID (e.g., T115394). Enter the ID offered by Tunnel Broker.
Subnet Prefix	Enter the subnet prefix address obtained from service provider. The maximum length of the prefix you can set is 128 characters.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through Ping Detect. Mode - Choose Always On or Ping Detect for the system to execute for WAN detection.

RIPng Protocol			
<input type="checkbox"/> Enable			
Bridge Mode			
<input type="checkbox"/> Enable Bridge Mode			
Bridge Subnet		LAN 1 ▼	

OK Cancel

Available settings are explained as follows:

Item	Description
IAID	Type a number as IAID.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through NS Detect or Ping Detect. Mode - Choose Always On , Ping Detect or NS Detect for the system to execute for WAN detection. With NS Detect mode, the system will check if network connection is established or not, like IPv4 ARP Detect. Always On means no detection will be executed. The network connection will be on always. <ul style="list-style-type: none"> ● Ping IP/Hostname - If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging. ● TTL (Time to Live) -If you choose Ping Detect as detection mode, you have to type TTL value.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.
Bridge Mode	Enable Bridge Mode - If the function is enabled, the router will work as a bridge modem. Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated.

Bridge Subnet - Make a bridge between the selected LAN subnet and such WAN interface.

After finished the above settings, click OK to save the settings.

II-1-2-11 Details Page for IPv6 – Static IPv6 in WAN1/WAN2

This type allows you to setup static IPv6 address for WAN interface.

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6

After finished the above settings, click OK to save the settings.

II-1-2-12 Details Page for IPv6 – 6in4 Static Tunnel in WAN1/WAN2

This type allows you to setup 6in4 Static Tunnel for WAN interface.

Such mode allows the router to access IPv6 network through IPv4 network.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than anycast endpoint. The mode has more reliability.

WAN >> Internet Access

WAN 1

II-1-3 Multi-VLAN

Multi-VLAN allows users to create profiles for specific WAN interface and bridge connections for user applications that require very high network throughput. Simply go to **WAN** and select **Multi-VLAN**.

Channel 1 to 2 have the following fixed assignments and cannot be altered.

- Channel 1: Ethernet / Fiber on WAN1.
- Channel 2: Ethernet / USB on WAN2 (based on the model)

Channels 3 through 8 can be bridged to one or more of the 3 LAN ports P2 through P4. In addition, Channels 3 through 5 can be configured as virtual WANs (WAN3 through WAN5).

General

This page shows the basic configurations used by every channel.

WAN >> Multi-VLAN

Item	Description
Enable Channel 6/7/8	Click it to enable the configuration of this channel.
WAN Type	The connections and interfaces created in every channel may select a specific WAN type to be built upon. In the Multi-VLAN application, only the Ethernet WAN type is available. The user will be able to select the physical WAN interface the channel shall use here.
General Settings	VLAN Tag - Enter the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not

	<p>configure the same VLAN tag value.</p> <p>Priority - Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.</p>
Bridge mode	<p>Enable - Click it to enable Bridge mode for such channel.</p> <p>Physical Members - Group the physical ports by checking the corresponding check box(es) for applying the bridge connection.</p> <p>Note: LAN port P1 is reserved for NAT use and cannot be selected for bridging.</p>

After finished the above settings, click **OK** to save the settings.

II-1-4 WAN Budget

This function is used to determine the data *traffic volume* for each WAN interface respectively to prevent from overcharges for data transmission by the ISP. Please note that the Quota Limit and Billing cycle day of month settings will need to be configured correctly first in order for some period calculations to be performed correctly.

II-1-4-1 General Setup

WAN >> WAN Budget

General Setup		Status			
Index	Enable	Quota	When quota exceeded	Time cycle	Duration
WAN1	<input type="checkbox"/>	0MB/0MB			0/00/00 00:00~0/00/00 00:00
WAN2	<input type="checkbox"/>	0MB/0MB			0/00/00 00:00~0/00/00 00:00

Note:

1. The budget traffic information provided here is for reference only, please consult your ISP for the actual traffic usage and charges.
2. When hardware acceleration function is used, the monitored WAN traffic of Ethernet WAN interfaces may be slightly inaccurate.

OK

Cancel

Item	Description
Index	The WAN port. Click to configure WAN Budget for a particular WAN.
Enable	Check to enable WAN Budget on this WAN.
Quota	The current cycle's Internet usage is expressed as x/y where x is the cumulative usage and y is the upper limit. For example, 100MB/200MB means the usage thus far in this cycle is 100MB, and the upper limit is 200MB.
When quota exceeded	Actions to be taken once the quota is reached. Shutdown - WAN will be disabled. Mail Alert - Email will be sent to the administrator.
Time cycle	Reset frequency of the usage data. Monthly - The Monthly option in the Criterion and Action tab was used to set up the usage quota. User Defined : The User Defined option in the Criterion and Action tab was used to set up the usage quota.
Duration	Start and end timestamps of the current cycle.

Click WAN1/WAN2 link to open the following web page.

II-2 LAN

Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

The most generic function of Vigor router is NAT. It creates a private subnet of your own. As mentioned previously, the router will talk to other public hosts on the Internet by using public IP address and talking to local hosts by using its private IP address. What NAT does is to translate the packets from public IP address to private IP address to forward the right packets to the right host and vice versa. Besides, Vigor router has a built-in DHCP server that assigns private IP address to each local host. See the following diagram for a briefly understanding.

In some special case, you may have a public IP subnet from your ISP such as 220.135.240.0/24. This means that you can set up a public subnet or call second subnet that each host is equipped with a public IP address. As a part of the public subnet, the Vigor router will serve for IP routing to help hosts in the public subnet to communicate with other public hosts or servers outside. Therefore, the router should be set as the gateway for public hosts.

What is Routing Information Protocol (RIP)

Vigor router will exchange routing information with neighboring routers using the RIP to accomplish IP routing. This allows users to change the information of the router such as IP address and the routers will automatically inform for each other.

What is Static Route

When you have several subnets in your LAN, sometimes a more effective and quicker way for connection is the **Static routes** function rather than other method. You may simply set rules to forward data from one specified subnet to another specified subnet without the presence of RIP.

What are Virtual LANs and Rate Control

You can group local hosts by physical ports and create up to 8 virtual LANs. To manage the communication between different groups, please set up rules in Virtual LAN (VLAN) function and the rate of each.

Web User Interface

A LAN comprises a collection of LAN clients, which are networked devices on your premises. A LAN client can be a computer, a printer, a Voice-over-IP (VoIP) phone, a mobile phone, a gaming console, an Internet Protocol Television (IPTV), etc, and can have either a wired (using Ethernet cabling) or wireless (using Wi-Fi) network connection.

LAN clients within the same LAN are normally able to communicate with one another directly, as they are peers to one another, unless measures, such as firewalls or VLANs, have been put in place to restrict such access. Nowadays the most common LAN firewalls are implemented on the LAN client itself. For example, Microsoft Windows since Windows XP and Apple OS X have built-in firewalls that can be configured to restrict traffic coming in and going out of the computer. VLANs, on the other hand, are usually set up using network switches or routers, such as the Vigor2915.

To communicate with the hosts outside of the LAN, LAN clients have to go through a network gateway, which in most cases is a router (such as the Vigor 2915) that sits between the LAN and the ISP network, which is the WAN. The router acts as a director to ensure traffic between the LAN and the WAN reach their intended destinations.

II-2-1 General Setup

This page provides you the general settings for LAN. Click **LAN** to open the LAN settings page and choose **General Setup**.

There are four subnets provided by the router which allow users to divide groups into different subnets (LAN1 - LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 - LAN4 can be operated under NAT or **Route** mode. IP Routed Subnet can be operated under Route mode.

Available settings are explained as follows:

Item	Description
General Setup	<p>Allow to configure settings for each subnet respectively.</p> <p>Index - Display all of the LAN items.</p> <p>Status- Basically, LAN1 status is enabled in default. LAN2 -LAN5 and IP Routed Subnet can be observed by checking the box of Status.</p> <p>DHCP- LAN1 is configured with DHCP in default. If required, please check the DHCP box for each LAN.</p> <p>IP Address - Display the IP address for each LAN item. Such information is set in default and you can not modify it.</p> <p>Details Page - Click it to access into the setting page. Each LAN will have different LAN configuration page. Each LAN must be configured in different subnet.</p> <p>IPv6 - Click it to access into the settings page of IPv6.</p>
DHCP Server Option	<p>DHCP packets can be processed by adding option number and data information when such function is enabled.</p> <p>For detailed information, refer to later section.</p>
Force router to use "DNS server IP address"	<p>Force Vigor router to use DNS servers configured in LAN1/LAN2/LAN3/LAN4 instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).</p>
Inter-LAN Routing	<p>Check the box to link two or more different subnets (LAN and LAN).</p> <p>Inter-LAN Routing allows different LAN subnets to be interconnected or isolated.</p> <p>It is only available when the VLAN functionality is enabled. Refer to section II-2-2 VLAN on how to set up VLANs.</p> <p>In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each</p>

other.

When you finish the configuration, please click OK to save.

Info

To configure a subnet, select its Details Page button to bring up the LAN Details Page.

II-2-1-1 Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
Network Configuration For NAT Usage IP Address <input type="text" value="192.168.1.1"/> Subnet Mask <input type="text" value="255.255.255.0 / 24"/> RIP Protocol Control <input type="text" value="Disable"/>	DHCP Server Configuration <input type="radio"/> Disable <input checked="" type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent Start IP Address <input type="text" value="192.168.1.10"/> IP Pool Counts <input type="text" value="200"/> (max. 253) Gateway IP Address <input type="text" value="192.168.1.1"/> Lease Time <input type="text" value="86400"/> (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients periodically DNS Server IP Address Primary IP Address <input type="text"/> Secondary IP Address <input type="text"/>

Available settings are explained as follows:

Item	Description
Network Configuration	For NAT Usage, IP Address - This is the IP address of the router. (Default: 192.168.1.1). Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/24). RIP Protocol Control, Enable - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network. If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.

	<p>Disable Server - Let you manually assign IP address to every host in the LAN.</p> <p>Enable Server - Let the router assign IP address to every host in the LAN.</p> <ul style="list-style-type: none"> ● Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. ● IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 200. Valid range is between 1 and 253. The actual number of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. ● Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the Network Configuration section above. ● Lease Time - The maximum duration DHCP-issued IP addresses can be used before they have to be renewed. ● Clear DHCP lease for inactive clients periodically - If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool. <p>Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following:</p> <ul style="list-style-type: none"> ■ Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30. ■ Clear DHCP lease when the client is not responding ARP replies. <p>Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field.</p> <ul style="list-style-type: none"> ● DHCP Server IP Address - It is available when Enable Relay Agent is checked. Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.
<p>DNS Server IP Address</p>	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p>Primary IP Address -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server.</p> <p>Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server.</p> <p>The default DNS Server IP address can be found via Online Status:</p>

Online Status

Physical Connection

System Uptime: 22:22:45

IPv4		IPv6	
LAN Status	Primary DNS: 8.8.8.8	Secondary DNS: 8.8.4.4	
IP Address	TX Packets	RX Packets	
192.168.1.1	0	41533	

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign DNS servers obtained from WAN interface to local users as a DNS proxy server and maintain a DNS cache. If there is no DNS servers available, router will use its own IP address instead.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click **OK** to save and exit this page.

Private IP addresses can be assigned automatically to LAN clients using Dynamic Host Configuration Protocol (DHCP), or manually assigned. The DHCP server can either be the router (the most common case), or a separate server, that hands out IP addresses to DHCP clients.

Alternatively, static IP addresses can be manually configured on LAN clients as part of their network settings. No matter how IP addresses are configured, it is important that no two devices get the same IP address. If both DHCP and static assignment are used on a network, it is important to exclude the static IP addresses from the DHCP IP pool. For example, if your LAN uses the 192.168.1.x subnet and you have 20 DHCP clients and 20 static IP clients, you could configure 192.168.1.10 as the Start IP Address, 50 as the IP Pool Counts (enough for the current number of DHCP clients, plus room for future expansion), and use addresses greater than 192.168.1.100 for static assignment.

Index	Matched MAC Address	given IP Address					

Available settings are explained as follows:

Item	Description
Network Configuration	<p>Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration.</p> <p>For Routing Usage,</p> <p>IP Address - This is the IP address of the router. (Default: 192.168.1.1).</p> <p>Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).</p> <p>RIP Protocol Control,</p> <p>Enable - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.</p>
DHCP Server Configuration	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p>Start IP Address - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p>IP Pool Counts - Enter the maximum number of PCs that you</p>

want the DHCP server to assign IP addresses to. The default is 0 and the maximum is 32.

Lease Time - Enter the time to determine how long the IP address assigned by DHCP server can be used.

Use LAN Port - Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2.

Use MAC Address - Check such box to specify MAC address.

- **MAC Address:** Enter the MAC Address of the host one by one and click **Add** to create a list of hosts which can be assigned, deleted or edited from above pool. Set a list of MAC Address for 2nd DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2nd subnet won't get an IP address belonging to 1st subnet.

Add - Enter the MAC address in the boxes and click this button to add.

Delete - Click it to delete the selected MAC address.

Edit - Click it to edit the selected MAC address.

Cancel - Click it to cancel the job of adding, deleting and editing.

When you finish the configuration, please click **OK** to save and exit this page.

II-2-1-4 Details Page for LAN IPv6 Setup

There are two configuration pages for LAN1/LAN2/LAN3/LAN4, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

LAN 1 Ethernet TCP / IP and DHCP Setup
LAN 1 IPv6 Setup

Enable IPv6

WAN Primary Interface WAN1 ▼

Start IPv6 Address ::

End IPv6 Address ::

Advance setting

Advance setting

It provides 2 daemons for LAN side IPv6 address configuration. One is **SLAAC**(stateless) and the other is **DHCPv6** (Stateful) server.

Available settings are explained as follows:

Item	Description
Enable IPv6	Check the box to enable the configuration of LAN 1 IPv6 Setup.
WAN Primary Interface	Use the drop down list to specify a WAN interface for IPv6.
Static IPv6 Address	IPv6 Address -Type static IPv6 address for LAN. Prefix Length - Enter the fixed value for prefix length. Add - Click it to add a new entry. Delete - Click it to remove an existed entry.
Unique Local Address (ULA) configuration	Unique Local Addresses (ULAs) are private IPv6 addresses assigned to LAN clients. Off - ULA is disabled.

	<p>Manually ULA Prefix - LAN clients will be assigned ULAs generated based on the prefix manually entered.</p> <p>Auto ULA Prefix - LAN clients will be assigned ULAs using an automatically-determined prefix.</p>
Current IPv6 Address Table	Display current used IPv6 addresses.
DNS Server IPv6 Address	<p>Deploy when WAN is up - The RA (router advertisement) packets will be sent to LAN PC with DNS server information only when network connection by any one of WAN interfaces is up.</p> <p>Enable - The RA (router advertisement) packets will be sent to LAN PC with DNS server information no matter WAN connection is up or not.</p> <ul style="list-style-type: none"> ● Primary DNS Server - Enter the IPv6 address for Primary DNS server. ● Secondary DNS Server -Type another IPv6 address for DNS server if required. <p>Disable - DNS server will not be used.</p>
Management	<p>Configures the Managed Address Configuration flag (M-bit) in Route Advertisements.</p> <ul style="list-style-type: none"> ● Off - No configuration information is sent using Route Advertisements. ● SLAAC(stateless) - M-bit is unset. ● DHCPv6(stateful) - M-bit is set, which indicates to LAN clients that they should acquire all IPv6 configuration information from a DHCPv6 server. The DHCPv6 server can either be the one built into the Vigor router, or a separate DHCPv6 server. <p>Other Option (O-bit) - Check this box to enable the O-bit for obtaining additional information (e.g., DNS) from DHCPv6. When selected, the Other Configuration flag is set, which indicates to LAN clients that IPv6 configuration information besides LAN IPv6 addresses is available from a DHCPv6 server.</p> <p>Setting the M-bit (see Management above) has the same effect as implicitly setting the O-bit, as DHCPv6 supplies all IPv6 configuration information, including what is indicated as available when the O-bit is set.</p>
DHCPv6 Server	<p>Enable Server -Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p> <p>Disable Server -Click it to disable DHCPv6 server.</p> <p>IPv6 Address Random Allocation - Check it to assign the DHCPv6 IP address randomly to prevent the attacks from the IPv6 reconnaissance techniques.</p> <p>Auto IPv6 range - After check the box, Vigor router will assign the IPv6 range automatically.</p> <p>Start IPv6 Address / End IPv6 Address -Enter the start and end address for IPv6 server.</p> <p>Advance setting - Click the Edit button to configure advanced IPv6 settings for DHCPv6 server.</p>
Advance setting	The Advanced Settings page has additional settings for Router Advertisement and enabling multiple WANs for IPv6

traffic.

The screenshot shows a web browser window displaying the 'Router Advertisement Configuration' page. The page has a title bar with the URL '192.168.1.1/doc/enetedit.htm'. The main content area is titled 'Router Advertisement Configuration' and contains several sections:

- Enable/Disable:** Radio buttons for 'Enable' (selected) and 'Disable'.
- Hop Limit:** Text input field with value '64'.
- Min Interval Time(sec):** Text input field with value '200'.
- Max Interval Time(sec):** Text input field with value '600'.
- Default Lifetime(sec):** Text input field with value '1800' and a note '(High Availability secondary is 0)'. There is also a '0' input field below it.
- Default Preference:** Dropdown menu set to 'Medium'.
- MTU:** Text input field with value '0' and a checkbox for 'Auto' which is checked.
- RIPng Protocol:** A checkbox for 'Enable' which is checked.
- Extension WAN:** Two list boxes: 'Available WAN' (empty) and 'Selected WAN' (containing 'WAN2'). There are '>>' and '<<' buttons between them.

Router Advertisement Configuration - Click **Enable** to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.

Disable - Click it to disable router advertisement server.

Hop Limit - The value is required for the device behind the router when IPv6 is in use.

Min/Max Interval Time (sec) - It defines the interval (between minimum time and maximum time) for sending RA (Router Advertisement) packets.

Default Lifetime (sec) - Within such period of time, Vigor2915 can be treated as the default gateway.

Default Preference - It determines the priority of the host behind the router when RA (Router Advertisement) packets are transmitted.

MTU - It means Max Transmit Unit for packet. If **Auto** is selected, the router will determine the MTU value for LAN.

RIPng Protocol - RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.

Extension WAN - In addition to the default WAN used for IPv6 traffic specified in the WAN Primary Interface in the LAN IPv6 Setup page, additional WANs can be selected to carry IPv6 traffic by enabling them in the Extension WAN section.

Available WAN - Additional WANs available but not currently selected to carry IPv6 traffic.

Selected WAN - Additional WANs selected to carry IPv6 traffic.

After making changes on the Advance setting page, click the **OK** button to retain the changes and return to the LAN IPv6 Setup page. Be sure to click **OK** on the LAN IPv6 Setup page or else changes made on the Advance setting page will not be saved.

II-2-1-5 Advanced DHCP Options

DHCP Options can be configured by clicking the DHCP Server Option button on the LAN General Setup screen.

LAN >> General Setup

DHCP Server Customized Status

Enable	Interface	Option	Type	Data

Enable:

Interface: All LAN1 LAN2 LAN3 LAN4 IP Routed Subnet

Next Server IP Address/SIAddr :

Option Number:

Data Type: ASCII Character (EX :Option:18, Data:/path)
 Hexadecimal Digit (EX: Option:18, Data:2f70617468)
 Address List (EX :Option:44, Data:172.16.2.10,172.16.2.20...)

Data:

Note:

1. Configuring options 44, 46 or 66 here will overwrite the settings by telnet command "msubnet".
2. Configuring option 3 here will overwrite the setting in "LAN >> General Setup" Details Page's "Gateway IP Address" field.
3. Configuring option 15 here will overwrite the setting in "WAN >> Internet Access >> Static or Dynamic IP" Detail Page's "Domain Name" field.

Available settings are explained as follows:

Item	Description
Customized List	Shows all the DHCP options that have been configured in the system.
Enable	If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled.
Interface	LAN interface(s) to which this entry is applicable.
Next Server IP Address/SIAddr	Overrides the DHCP Next Server IP address (DHCP Option 66) supplied by the DHCP server.
Option Number	DHCP option number (e.g., 100).
Data Type	Type of data in the Data field: ASCII Character - A text string. Example: /path. Hexadecimal Digit - A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468. Address List - One or more IPv4 addresses, delimited by commas.
Data	Data of this DHCP option.

To add a DHCP option entry from scratch, clear the data entry fields (**Enable**, **Interface**, **Option Number**, **Data Type** and **Data**) by clicking Reset. After filling in the values, click **Add** to create the new entry.

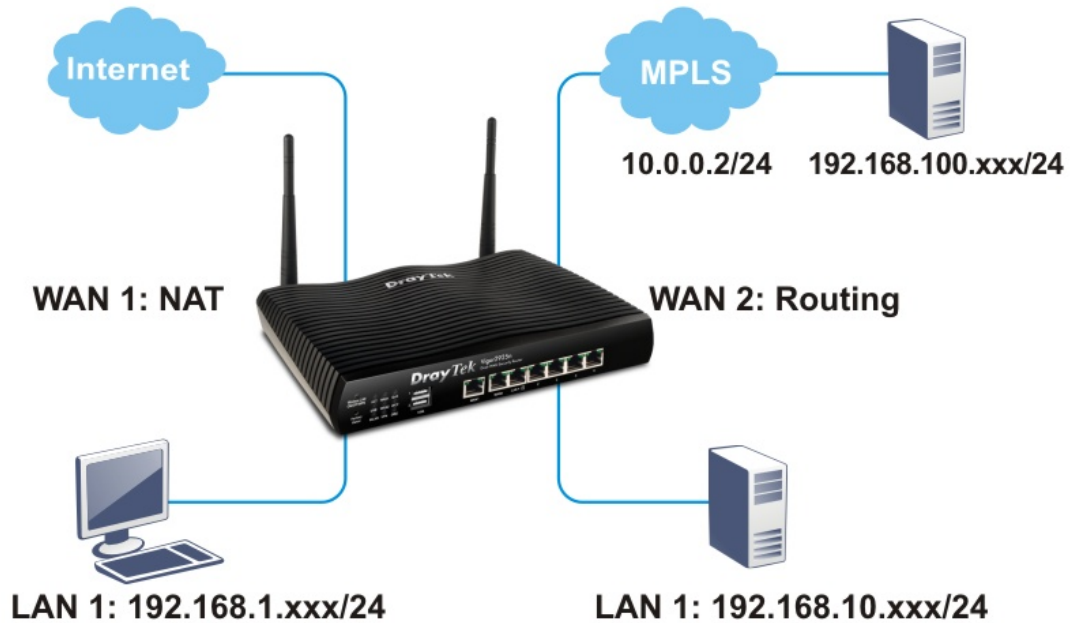

To add a DHCP option entry modeled after an existing entry, click the model entry in **Customized List**. The data entry fields will be populated with values from the model entry. After making all necessary changes for the new entry, click **Add** to create it.

To modify an existing DHCP option entry, click on it in **Customized List**. The data entry fields will be populated with the current values from the entry. After making all necessary changes, click **Update** to save the changes.

To delete a DHCP option entry, click on it in **Customized List**, and then click **Delete**.

Application Notes

A-1 Multi-subnet Application - How to utilize Vigor router with non-NAT?

1. Open LAN>>General Setup. Click the Details Page button of LAN1.

VLAN3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

- Return to **LAN>>General Setup**. Now, LAN2 is available for configuration. Click the **Details Page** button of LAN2. Choose **For Routing Usage**. Enter the settings as follows and click **OK** to save the settings.

LAN >> General Setup

LAN 2 Ethernet TCP / IP and DHCP Setup	LAN 2 IPv6 Setup
Network Configuration <input checked="" type="radio"/> Enable <input type="radio"/> Disable <input checked="" type="radio"/> For NAT Usage <input type="radio"/> For Routing Usage IP Address: <input type="text" value="192.168.2.1"/> Subnet Mask: <input type="text" value="255.255.255.0 / 24"/>	DHCP Server Configuration <input type="radio"/> Disable <input checked="" type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent Start IP Address: <input type="text" value="192.168.2.10"/> IP Pool Counts: <input type="text" value="100"/> (max. 1021) Gateway IP Address: <input type="text" value="192.168.2.1"/> Lease Time: <input type="text" value="259200"/> (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients periodically.
	DNS Server IP Address Primary IP Address: <input type="text"/> Secondary IP Address: <input type="text"/>

Note: Change IP Address or Subnet Mask in Network Configuration will also change **HA** LAN2 Virtual IP to the same domain IP.

OK

- Open WAN>>Internet Access. Choose Static or Dynamic IP as Access Mode. Then click Details Page.
- In the configuration web page, Enter the settings as follows and click OK to save the settings.

WAN >> Internet Access

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input checked="" type="radio"/> Enable <input type="radio"/> Disable	IP Network Settings <input type="radio"/> Obtain an IP address automatically More Options + <input checked="" type="radio"/> Specify an IP address IP Address: <input type="text" value="192.168.100.16"/> Subnet Mask: <input type="text" value="255.255.255.0"/> Gateway IP Address: <input type="text" value="10.0.0.2"/> <input type="text" value="WAN IP Alias"/>	Keep WAN Connection <input type="checkbox"/> Enable PING to keep alive PING to the IP: <input type="text"/> PING Interval: <input type="text" value="0"/> minute(s)	
	DNS Server IP Address Primary Server: <input type="text" value="8.8.8.8"/> Secondary Server: <input type="text" value="8.8.4.4"/>	TTL <input checked="" type="checkbox"/> Change the TTL value	
	WAN Connection Detection Mode: <input type="text" value="ARP Detect"/>	RIP Routing <input type="checkbox"/> Enable RIP	
	MTU <input type="text" value="1500"/> <input type="checkbox"/> Path MTU Discovery	Bridge Mode <input type="checkbox"/> Enable Bridge Mode Bridge Subnet: <input type="text" value="LAN 1"/>	
		MAC Address <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Use the following MAC Address <input type="text" value="00:1D:AA:69:87:C2"/>	

- Now, a network connection via MPLS (Multiprotocol Label Switching) between LAN2 user and the Branch user is established successfully. Internet is not required for them.

II-2-2 VLAN

Virtual Local Area Networks (VLANs) allow you to subdivide your LAN to facilitate management or to improve network security.

Select **LAN>>VLAN** from the menu bar of the Web UI to bring up the VLAN Configuration page.

Tagged VLAN

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is **tag-based multi-subnet**.

Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P1 ~ P4) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

For Vigor router with 2.4GHz and 5GHz features, the web page will be shown as follow:

LAN >> VLAN Configuration

VLAN Configuration

<input type="checkbox"/> Enable	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag

Permit untagged device in P1 to access router

Note:

1. For each VLAN row, selecting Enable VLAN Tag will apply the associated VID to the selected wired LAN port.
2. Wireless LAN traffic is always untagged, but the SSID is still a member of the selected VLAN (group).
3. Each VID must be unique.

OK Clear Cancel

Info

Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
Enable	Click it to enable VLAN configuration.
LAN	P1 - P4- Check the LAN port(s) to group them under the selected VLAN.
Wireless LAN (2.4GHz)	SSID1 - SSID4 - Check the SSID boxes to group them under the selected VLAN.
Wireless LAN (5GHz)	SSID1 - SSID4 - Check the SSID boxes to group them under the selected VLAN. This option is only available for Vigor2915ac / Vigor2915Vac / Vigor2915Lac.
Subnet	Choose one of them to make the selected VLAN mapping to the specified subnet only. For example, LAN1 is specified for VLAN0. It means that PCs grouped under VLAN0 can get the IP address(es) that specified by the subnet.
VLAN Tag	<p>Enable - Check the box to enable the function of VLAN with tag.</p> <p>The router will add specific VLAN number to all packets on the LAN while sending them out.</p> <p>Please Enter the tag value and specify the priority for the packets sending by LAN.</p> <p>VID - Enter the value as the VLAN ID number. The range is</p>

	<p>form 0 to 4095. VIDs must be unique.</p> <p>Priority - Valid values are from 0 to 7, where 1 has the lowest priority, followed by 0, and finally from 2 to 7 in increasing order of priority.</p>
Permit untagged device in P1 to access router	Select to allow untagged hosts connected to LAN port P1 to access the router. In case you have incorrectly configured VLAN functionality, you will still be able to access the router via the Web UI, and telnet and SSH shells to adjust the configuration.

Info

Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

Inter-LAN Routing

The Vigor router supports up to 16 VLANs. Each VLAN can be set up to use one or more of the Ethernet ports and wireless LAN Service Set Identifiers (SSIDs). Within the grid of VLANs (horizontal rows) and LAN interfaces (vertical columns),

- all hosts within the same VLAN (horizontal row) are visible to one another
- all hosts connected to the same LAN or WLAN interface (vertical column) are visible to one another if
 - they belong to the same VLAN, or
 - they belong to different VLANs, and inter-LAN routing (LAN>>General Setup) between them is enabled (see below).

Force router to use "DNS server IP address" settings specified in LAN1 ▾

Inter-LAN Routing

Subnet	LAN 1	LAN 2	LAN 3	LAN 4
LAN 1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LAN 2	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LAN 3	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
LAN 4	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

OK

Inter-LAN Routing allows different LAN subnets to be interconnected or isolated. It is only available when the VLAN functionality is enabled. In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.

Vigor2915 series features a hugely flexible VLAN system. In its simplest form, each of the Gigabit LAN ports can be isolated from each other, for example to feed different companies or departments but keeping their local traffic completely separated.

Configuring port-based VLAN for wireless and non-wireless clients

1. All the wire network clients are categorized to group VLAN0 in subnet 192.168.1.0/24 (LAN1).
2. All the wireless network clients are categorized to group VLAN1 in subnet 192.168.2.0/24 (LAN2).
3. Open LAN>>VLAN Configuration. Check the boxes according to the statement in step 1 and Step 2.

LAN >> VLAN Configuration

VLAN Configuration

Enable

	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag			
	P1	P2	P3	P4	SSID1	SSID2	SSID3	SSID4	SSID1	SSID2	SSID3	SSID4	Subnet	Enable	VID	Priority
VLAN0	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 2	<input type="checkbox"/>	0	0
VLAN3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 3	<input type="checkbox"/>	0	0
VLAN4	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 4	<input type="checkbox"/>	0	0
													LAN 5	<input type="checkbox"/>	0	0

- Click OK.
- Open LAN>>General Setup. If you want to let the clients in both groups communicate with each other, simply activate **Inter-LAN Routing** by checking the box between LAN1 and LAN2.

Vigor router supports up to six private IP subnets on LAN. Each can be independent (isolated) or common (able to communicate with each other). This is ideal for departmental or multi-occupancy applications.

Info

As for the VLAN applications, refer to "Appendix I: VLAN Application on Vigor Router" for more detailed information.

II-2-3 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. With the Bind IP to MAC feature you can reserve LAN IP addresses for LAN clients. Each reserved IP address is associated with a Media Access Control (MAC) address.

Click LAN and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

Bind IP to MAC

Enable Disable
 Strict Bind
 Apply Strict Bind to Subnet:

ARP Table | [Select All](#) | [Sort](#) | [Refresh](#) | [Add/Update to IP Bind List](#)

IP Address	Mac Address	HOST ID
192.168.1.5	60-A4-4C-E6-5A-4F	
192.168.1.10	00-1D-AA-0C-CD-08	

IP Address:
 Mac Address: : : : :
 Comment: Max: 12 characters

IP Bind List (Limit: 300 entries) | [Select All](#) | [Sort](#)

Index	IP Address	Mac Address	Host ID	Comment

 Upload From File: 未選擇任何檔案

Note:

1. IP-MAC binding presets DHCP Allocations.
2. If Strict Bind is enabled, unspecified LAN clients in the selected subnets cannot access the Internet.
3. Comment can not contain characters " and '.

Available settings are explained as follows:

Item	Description
Enable	Click this radio button to invoke this function. However, IP/MAC which is not listed in IP Bind List also can connect to Internet.
Disable	Click this radio button to disable this function. All the settings on this page will be invalid.
Strict Bind	Check the box to block the connection of the IP/MAC which is not listed in IP Bind List. LAN clients will be assigned IP addresses according to the

	<p>MAC-to-IP address associations on this page. LAN client whose MAC address has not been bound to an IP address will be denied network access.</p> <p>Note: Before selecting Strict Bind, make sure at least one valid MAC address has been bound to an IP address. Otherwise no LAN clients will have network access, and it will not be possible to connect to the router to make changes to its configuration.</p> <p>Apply Strict Bind to Subnet – Choose the subnet(s) for applying the rules of Bind IP to MAC.</p> 
ARP Table	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below.
Select All	Select all entries in the ARP Table for manipulation.
Sort	Reorder the entry based on the IP address.
Refresh	Refresh the ARP table listed below to obtain the newest ARP table information.
Add/Update to IP Bind List	<p>IP Address – Enter the IP address to be associated with a MAC address.</p> <p>Mac Address – Enter the MAC address of the LAN client’s network interface.</p> <p>Comment – Type a brief description for the entry.</p>
Add	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List .
Update	It allows you to edit and modify the selected IP address and MAC address that you create before.
Delete	You can remove any item listed in IP Bind List . Simply click and select the one, and click Delete . The selected item will be removed from the IP Bind List .
IP Bind List	It displays a list for the IP bind to MAC information.
Backup IP Bind List	Click Backup and enter a filename to back up IP Bind List to a file.

Upload From File

Click **Browse...** to select an IP Bind List backup file. Click **Restore** to restore the backup and overwrite the existing list.

Info

Before you select Strict Bind, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click **OK** to save the settings.

II-2-4 LAN Port Mirror

The LAN Port Mirror function allows network traffic of select LAN ports to be forwarded to another LAN port for analysis. This is useful for enforcing policies, detecting unauthorized access, monitoring network performance, etc.

Select LAN>>LAN Port Mirror from the menu bar of the Web UI to bring up the LAN Port Mirror configuration page.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:					
<input type="radio"/> Enable <input checked="" type="radio"/> Disable					
	Port1	Port2	Port3	WAN1	WAN2
Mirror Port		<input type="radio"/>	<input type="radio"/>		
Mirrored Tx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mirrored Rx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Note:

Mirroring WAN1 or WAN2 is done by software mirror, so it will lead to a substantial decline in performance.

OK

Available settings are explained as follows:

Item	Description
Port Mirror	Enables or disables LAN Port Mirroring.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.

After finishing all the settings here, please click OK to save the configuration.

II-2-5 Wired 802.1x

Wired 802.1X provides authentication for clients wishing to connect to the LAN by Ethernet. Only one client can be authenticated on each LAN port.

Select LAN>>Wired 802.1X from the menu bar of the Web UI to bring up the Wired 802.1X configuration page.

LAN >> Wired 802.1X

Wired 802.1X

LAN 802.1X:

Enable

802.1X ports:

P1

P2

P3

Note:

802.1X enabled LAN ports only support a single attached device using EAPOL authentication. To authenticate multiple devices through a LAN port you need an 802.1X-capable switch. Then configure 802.1X on the attached switch instead.

OK

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable LAN 802.1x function.
802.1x ports	802.1X authentication will be available for the selected LAN ports.

After finishing all the settings here, please click OK to save the configuration.

II-3 Hardware Acceleration

Hardware Acceleration is also called PPA in DrayTek for it is based on **Protocol Processing Engine (PPE)** of Infineon. It can only support 128 sessions for network traffic (IN & OUT) with implementing three kinds of modes - Disable, Auto and Manual.

II-3-1 Setup

When the data traffic is heavy and data transmission is getting slowly and slowly, you can configure this page to accelerate the data streaming by hardware itself. Open **Hardware Acceleration** to access into the following page:

Hardware Acceleration >> Setup

Mode:

Protocol: TCP UDP

Option: Accelerate heaviest traffic sessions

Specific Hosts:

Index	Enable	Dest Port Start	Dest Port End	Private IP	
1.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
2.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
3.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
4.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
5.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>

Note:

1. If Hardware Acceleration is enabled, the accelerated sessions will bypass Traffic Graph.
2. Hardware Acceleration and WAN1&WAN2 Budget can't be enabled simultaneously.

Available settings are explained as follows:

Item	Description
Mode	<p>Disable - The default setting.</p> <p>Auto - When the hardware acceleration is configured with the Auto mode, the sessions with the heaviest loading and the lower latency traffic will be added into PPA. However, the Auto mode does not support UDP protocol by designed.</p> <p>Manual - The Manual mode implements three sub-items-- <i>Accelerate most heavy traffic sessions</i>, <i>Apply the Class Rule in Quality of Service</i>, and <i>Specific Hosts</i>. Each of these sub-items can support TCP and UDP protocol.</p>
Protocol	There are two types supported by this function, TCP and UDP.
Option	<p>Accelerate heaviest traffic sessions - Such option is available in Auto Mode, too. But the UDP protocol is only supported in this sub-item.</p> <p>Specific Hosts - This sub-item provides 5 hosts for adding NAT sessions into the PPA. For the PPA only supports 128</p>

sessions, these hosts will share these sessions. Therefore, the performance will be lower than only one host.
Choose this option to specify certain PCs on LAN to apply the hardware acceleration.

- **Enable** - Check the box to make PC(s) specified in the selected index entry to be applied.
- **Dest Port Start** - Enter the starting port for the PC(s) in LAN.
- **Dest Port End** - Enter the ending port for the PC(s) in LAN.
- **Private IP/Choose PC** - Enter the IP address as the selected host. Or click the Choose PC button to specify one IP address from the pop-up window.

Checking the PPA status

For checking whether the rule of PPA is working or not, a user can login to Vigor2915 series by using telnet. User can view how many sessions are transferring in each direction of PPA table after entering "ppa -v".

```
> ppa -v
% PPA mode is Auto
% PPA mode is Manual <traffic>
% PPA time is 10
% PPA range is 255

```

II-4 NAT

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

Info

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

II-4-1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with public IP address from external users to the mapping private IP address/port of the server.

The port redirection can only apply to incoming traffic.

To use this function, please go to NAT page and choose Port Redirection web page. The Port Redirection Table provides 40 port-mapping entries for the internal hosts.

Note:

In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such port redirection setting.
Mode	Two options (Single and Range) are provided here for you to choose. To set a range for the specific service, select Range . In Range mode, if the public port (start port and end port) and the starting IP of private IP had been entered, the system will calculate and display the ending IP of private IP automatically.
Service Name	Enter the description of the specific network service.
Protocol	Select the transport layer protocol (TCP or UDP).
WAN Interface	Select the WAN IP used for port redirection. There are eight WAN IP alias that can be selected and used for port redirection. The default setting is All which means all the incoming data from any port will be redirected to all interfaces.
Public Port	Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Enter the required number on the first box (as the starting port) and the second box (as the ending port).
Source IP	IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Private IP	Specify the private IP address of the internal host providing the service. If you choose Range as the port redirection mode, you will see two boxes on this field. Type a complete IP address in the first box (as the starting point). The second one will be assigned automatically later.
Private Port	Specify the private port number of the service offered by the internal host.

After finishing all the settings here, please click OK to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

II-4-2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click **DMZ Host** to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

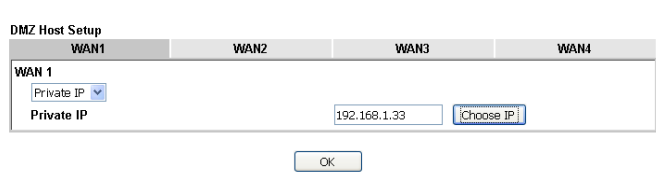

NAT >> DMZ Host Setup

DMZ Host Setup

WAN1	WAN2
WAN 1	
None ▼	
Private IP	<input type="text"/> Choose IP

OK

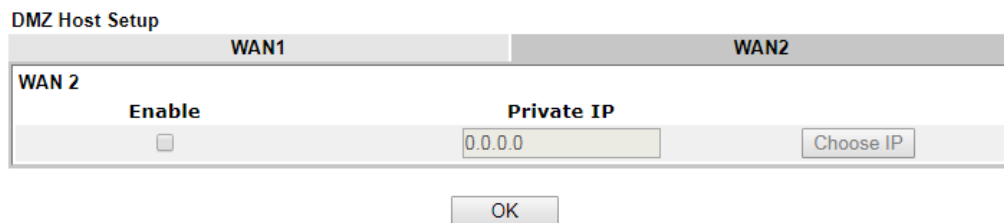

Available settings are explained as follows:

Item	Description
WAN1	Choose Private IP or None first.
Private IP	Enter the private IP address of the DMZ host, or click Choose IP to select one.
Choose IP	<p>Click this button and then a window will automatically pop up. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p> <p>When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting.</p> <p>NAT >> DMZ Host Setup</p> 

DMZ Host for WAN2 is slightly different with WAN1.

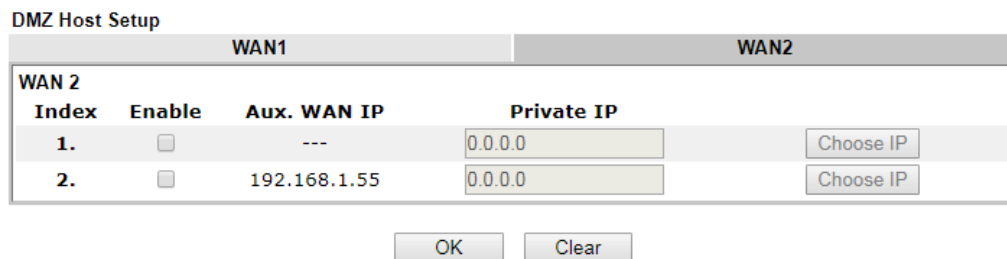

See the following figure.

NAT >> DMZ Host Setup

If you previously have set up **WAN Alias** for **PPPoE** or **Static** or **Dynamic IP** mode in **WAN2** interface, you will find them in **Aux. WAN IP** for your selection.

NAT >> DMZ Host Setup

Index	Enable	Aux. WAN IP	Private IP
1.	<input type="checkbox"/>	---	0.0.0.0
2.	<input type="checkbox"/>	192.168.1.55	0.0.0.0

Available settings are explained as follows:

Item	Description
Enable	Check to enable the DMZ Host function.
Private IP	Enter the private IP address of the DMZ host, or click Choose IP to select one.

Choose IP	Click this button and then a window will automatically pop up. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host. When you have selected one private IP from the above dialog, the IP address will be shown on the screen. Click OK to save the setting.
------------------	---

After finishing all the settings here, please click **OK** to save the configuration.

II-4-3 Open Ports

Open Ports allows you to open a range of ports for the traffic of special applications.

Common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule and others), Internet Camera etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

Click **Open Ports** to open the following page:

NAT >> Open Ports

7.	TCP/UDP	0	0	8.	TCP/UDP	0	0
9.	TCP/UDP	0	0	10.	TCP/UDP	0	0

Available settings are explained as follows:

Item	Description
Enable Open Ports	Check to enable this entry.
Comment	Make a name for the defined network application/service.
WAN Interface	Specify the WAN interface that will be used for this entry.
Source IP	Use the drop down list to specify an IP object. Or click IP Object link to create a new one for applying.
Private IP	Enter the private IP address of the local host or click Choose IP to select one. Choose IP - Click this button and, subsequently, a window having a list of private IP addresses of local hosts will automatically pop up. Select the appropriate IP address of the local host in the list.
Protocol	Specify the transport layer protocol. It could be TCP, UDP, or ----- (none) for selection.
Start Port	Specify the starting port number of the service offered by the local host.
End Port	Specify the ending port number of the service offered by the local host.

After finishing all the settings here, please click **OK** to save the configuration.

II-4-4 Port Triggering

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

Triggering Protocol	Select the protocol (TCP, UDP or TCP/UDP) for such triggering profile.
Triggering Port	Enter the port or port range for such triggering profile.
Incoming Protocol	When the triggering packets received, it is expected the incoming packets will use the selected protocol. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.
Incoming Port	Enter the port or port range for the incoming packets.

After finishing all the settings here, please click **OK** to save the configuration.

II-4-5 ALG

ALG means **Application Layer Gateway**. There are two methods provided by Vigor router, RTSP (Real Time Streaming Protocol) ALG and SIP (Session Initiation Protocol) ALG, for processing the packets of voice and video.

RTSP ALG makes RTSP message, RTCP message, and RTP packets of voice and video be transmitted and received correctly via NAT by Vigor router.

However, SIP ALG makes SIP message and RTP packets of voice be transmitted and received correctly via NAT by Vigor router.

NAT >> ALG

ALG (Application Layer Gateway) [Set to Factory Default](#)

Enable ALG

<input type="checkbox"/> Enable	Protocol	Listen Port	TCP	UDP

OK

Available settings are explained as follows:

Item	Description
Enable ALG	Check to enable such function.
Listen Port	Type a port number for SIP or RTSP protocol.
TCP	Check the box to make correspond protocol message packet from TCP transmit and receive via NAT.
UDP	Check the box to make correspond protocol message packet from UDP transmit and receive via NAT.

II-5 Applications

Dynamic DNS

The ISP often provides you with a dynamic IP address when you connect to the Internet via your ISP. It means that the public IP address assigned to your router changes each time you access the Internet. The Dynamic DNS feature lets you assign a domain name to a dynamic WAN IP address. It allows the router to update its online WAN IP address mappings on the specified Dynamic DNS server. Once the router is online, you will be able to use the registered domain name to access the router or internal virtual servers from the Internet. It is particularly helpful if you host a web server, FTP server, or other server behind the router.

Before you use the Dynamic DNS feature, you have to apply for free DDNS service to the DDNS service providers. The router provides up to three accounts from three different DDNS service providers. Basically, Vigor routers are compatible with the DDNS services supplied by most popular DDNS service providers such as www.dyndns.org, www.no-ip.com, www.dtdns.com, www.changeip.com, www.dynamic-nameserver.com. You should visit their websites to register your own domain name for the router.

LAN DNS / DNS Forwarding

The LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2915 series will respond the specified private IP address.

Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

LDAP /Active Directory Setup

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform, inquire and modify the information within the directory, and acquire the data in the directory securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

UPnP

The **UPnP** (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router.

Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN (WOL)** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as "Enable" on the BIOS setting.

Web User Interface

II-5-1 Dynamic DNS

Enable the Function and Add a Dynamic DNS Account

1. Assume you have a registered domain name from the DDNS provider, say *hostname.dyndns.org*, and an account with username: *test* and password: *test*.
2. Open Applications>>Dynamic DNS.
3. In the DDNS setup menu, check **Enable Dynamic DNS Setup**.

Applications >> Dynamic DNS Setup

[Set to Factory Default](#)

(e.g., <code>http://ns1.vigorddns.com/ddns.php?username=xxxx&password=xxxx&domain=xxxx.vigorddns.com</code>)</p> <p>Note that such option is available when User-Defined is selected as Service Provider.</p>
Connection Type	There are two connection types (HTTP and HTTPs) to be specified. Note that such option is available when Customized is selected as Service Provider.
Server Response	<p>Type any text that you want to receive from the DDNS server.</p> <p>Note that such option is available when User-Defined is selected as Service Provider.</p>
Login Name	Type in the login name that you set for applying domain.
Password	Type in the password that you set for applying domain.
Wildcard and Backup MX	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.
Mail Extender	If the mail server is defined with another name, please Enter the name in this area. Such mail server will be used as backup mail exchange.
Determine Real WAN IP	<p>If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP.</p> <p>When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update.</p> <p>There are two methods offered for you to choose:</p> <ul style="list-style-type: none"> ● WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away. ● Internet IP - If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.

5. Click OK button to activate the settings. You will see your setting has been saved.

DrayDDNS Settings

DrayDDNS, a new DDNS service developed by DrayTek, can record multiple WAN IP (IPv4) on single domain name. It is convenient for users to use and easily to set up. Each Vigor Router is available to register one domain name.

Choose **DrayTek Global** as the service provider, the web page will be displayed as follows:

Index : 1

<input checked="" type="checkbox"/> Enable Dynamic DNS Account	
Service Provider	DrayDDNS (Global) <input type="button" value="Wizard"/>
Status	Inactivated
Domain Name	<input type="text"/> .drayddns.com
Determine WAN IP	Internet IP <input checked="" type="checkbox"/> IPv4 <input type="checkbox"/> IPv6
WAN Interfaces	<input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 2
Connection Type	Http <input type="button" value="v"/>
Let's Encrypt certificate	
Status	Not Valid Yet
Auto Renew	<input type="checkbox"/>

Available settings are explained as follows:

Item	Description
Enable Dynamic DNS Account	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
Service Provider	Choose DrayTek Global as the service provider. Wizard - This button is available when DrayTek Global is selected as Service Provider. To activate the DrayTek's DDNS service, click it to enable license issued by DrayTek through Wizards>>Service Activation Wizard . Refer to section A-1 How to use DrayDDNS? for detailed information.
Status	Display if the license is actvtaed or not.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: <ul style="list-style-type: none"> ● WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away. ● Internet IP - If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.
WAN Interfaces	WAN1/WAN2 - While connecting, the router will use WAN1/WAN2 as the channel for such account.
Connection Type	Choose Http or Https .
Let's Encrypt certificate	Status - Click the link to display the certificate information. Auto Renew - Check the box to make the system update the certificate automatically.

Disable the Function and Clear all Dynamic DNS Accounts

Uncheck **Enable Dynamic DNS Setup**, and click **Clear All** button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

Click the **Index** number you want to delete and then click **Clear All** button to delete the account.

II-5-2 LAN DNS / DNS Forwarding

The LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2915 series will respond the specified private IP address.

Simply click **Application>>LAN DNS / DNS Forwarding** to open the following page.

Applications >> LAN DNS / DNS Forwarding

LAN DNS Resolution / Conditional DNS Forwarding

[Set to Factory Default](#)

Index	Enable	Profile	Domain Name	Forwarding	DNS Server
1.	<input type="checkbox"/>			-	
2.	<input type="checkbox"/>			-	
3.	<input type="checkbox"/>			-	
4.	<input type="checkbox"/>			-	
5.	<input type="checkbox"/>			-	
6.	<input type="checkbox"/>			-	
7.	<input type="checkbox"/>			-	
8.	<input type="checkbox"/>			-	
9.	<input type="checkbox"/>			-	
10.	<input type="checkbox"/>			-	

<< 1-10 | 11-20 >>

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profiles and recover to factory settings.
Index	Click the number below Index to access into the setting page.
Enable	Check the box to enable the selected profile.
Profile	Display the name of the LAN DNS profile.

Domain Name	Display the domain name of the LAN DNS profile.
Forwarding	Display that such profile is conditional DNS forwarding or not.
DNS Server	Display the IP address of the DNS Server.

To create a LAN DNS profile:

1. Click any index, say Index No. 1.
2. The detailed settings with index 1 are shown below.

Applications >> LAN DNS / DNS Forwarding

LAN DNS Conditional DNS Forwarding

Profile Index : 1

Enable

Profile:

Domain Name:

Note:

1. Support wildcard subdomain, ex: *.example.com or www.example.*

2. One domain Name has only one IPv4 address and IPv6 address in the same subnet.

CNAME(Alias Domain Name):

IP Address List (Max. 40 entries)

Index	IP Address	Same Subnet Reply

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such profile.
Profile	Type a name for such profile. Note: If you type a name here for LAN DNS and click OK to save the configuration, the name also will be applied to conditional DNS forwarding automatically.
Domain Name	Enter the domain name for such profile.
IP Address List	The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name. Add - Click it to open a dialog to Enter the host's IP address. ● Only use this record... - Different LAN PCs can share the same domain name. However, you have to check this box to make the router identify & respond the IP address for the DNS query coming from different LAN PC. Delete - Click it to remove an existed IP address on the list.

3. Click **OK** button to save the settings.
4. If you need to configure LAN DNS settings, click index 1 to edit the LAN DNS profile just created. Or, you can click index 2 to use this profile as conditional DNS forwarding.

Applications >> LAN DNS / DNS Forwarding

LAN DNS	Conditional DNS Forwarding
Profile Index : 1 <input type="checkbox"/> Enable Profile: <input style="width: 80px;" type="text"/> Domain Name: <input style="width: 250px;" type="text"/> Note: Support wildcard subdomain, ex: *.example.com DNS Server IP Address: <input style="width: 300px;" type="text"/>	
<input type="button" value="OK"/> <input type="button" value="Clear"/>	

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such profile.
Profile	Type a name for such profile. Note: If you type a name here for conditional DNS forwarding and click OK to save the configuration, the name also will be applied to LAN DNS automatically.
Domain Name	Enter the domain name for such profile.
DNS Server IP Address	Enter the IP address of the DNS server you want to use for DNS forwarding.

5. Click **OK** button to save the settings.
6. A new LAN DNS profile has been created.

II-5-3 DNS Security

DNS security is able to ensure that the incoming data is not falsified and the source of the data is secure and correct to prevent from DNS attack by someone.

II-5-3-1 General Setup

All of WAN interfaces of Vigor router can be configured with DNS Security enabled respectively.

Application >> DNS Security 

DNS Security

General Setup		Domain Diagnosis		Refresh
Interface	Enable	Primary DNS	Secondary DNS	Bogus DNS Reply
WAN1	<input type="checkbox"/>	---	---	Pass ▼
WAN2	<input type="checkbox"/>	---	---	Pass ▼

Note:

-  The DNS server supports DNSSEC
-  The DNS server does not support DNSSEC, function may not work as expected even if it is enabled

Available settings are explained as follows:

Item	Description
Interface	There are four WAN interfaces allowed to be set with DNS security enabled.
Enable	Check the box to enable the DNS security management.
Primary DNS	Display the IP address of primary DNS obtained from DHCP server or specified by Static WAN.
Secondary DNS	Display the IP address of secondary DNS obtained from DHCP server or specified by Static WAN.
Bogus DNS Reply	Sometime, Vigor router might encounter packets from bogus DNS inquiry. There are two ways to reply such DNS inquiry. Drop - Discard the packets. Pass - Accept the packets and let them pass through Vigor router.

II-5-3-2 Domain Diagnose

This page is used to configure settings for manually detecting if the domain is secure not.

Application >> DNS Security

DNS Security

General Setup | **Domain Diagnosis** | [DNS Cache](#)

Domain: IPv4 IPv6

Interface: ▼

DNS Server:

Note:
If the domain has not been queried before, it will take a few seconds to process.

Result | [Clear](#) |

Domain Name	IP Address	Interface	Verify Result

Available settings are explained as follows:

Item	Description
Domain	Enter the domain name or IP address (IPv4/IPv6) that you want to query.
Interface	Specify the interface required for executing diagnose.
DNS Server	Enter the IP address of the DNS Server which will diagnose the domain specified above.
Diagnose	Click it to perform the diagnosis for the domain.
Result	The diagnosed information will be displayed on such field.

II-5-4 Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

You have to set your time before set schedule. In **System Maintenance>> Time and Date** menu, press **Inquire Time** button to set the Vigor router's clock to current time of your PC. The clock will reset once if you power down or reset the router. There is another way to set up time. You can inquire an NTP server (a time server) on the Internet to synchronize the router's clock. This method can only be applied when the WAN connection has been built up.

Applications >> Schedule

Schedule : Current System Time | [System time set](#) | [Set to Factory Default](#) |

Index	Enable	Comment	Time	Frequency
1	<input type="checkbox"/>			Sun.
2	<input type="checkbox"/>			Sun.
3	<input type="checkbox"/>			Sun.
4	<input type="checkbox"/>			Sun.
5	<input type="checkbox"/>			Sun.
6	<input type="checkbox"/>			Sun.
7	<input type="checkbox"/>			Sun.
8	<input type="checkbox"/>			Sun.
9	<input type="checkbox"/>			Sun.
10	<input type="checkbox"/>			Sun.
11	<input type="checkbox"/>			Sun.
12	<input type="checkbox"/>			Sun.
13	<input type="checkbox"/>			Sun.
14	<input type="checkbox"/>			Sun.
15	<input type="checkbox"/>			Sun.

Force on Force down

Available settings are explained as follows:

Item	Description
Current System Time	Display the time Vigor router used.
System time set	Click it to access into the time setup page (System Maintenance>>Time and Date).
Set to Factory Default	Clear all profiles and recover to factory settings.
Index	Click the index number link to access into the setting page of schedule.

Enable	Click the box to enable such schedule profile.
Comment	Display the name of the time schedule.
Time	Display the valid time period by time bar.
Frequency	Display which day(s) will be always on and which day(s) will be always off of the schedule profile by color boxes. ● - If it lights in green, it means such schedule is active.

You can set up to 15 schedules. Then you can apply them to your Internet Access or VPN and Remote Access >> LAN-to-LAN settings.

To add a schedule:

1. Click any index, say Index No. 1.
2. The detailed settings of the schedule with index 1 will be shown below.

Applications >> Schedule

Index No. 1 Current System Time 2017 Aug 15 Tue 3 : 39 : 34 | **System time set** |

Enable Schedule Setup

Comment

Start Date (yyyy-mm-dd) 2000 - 1 - 1

Start Time (hh:mm) 0 : 0

Duration Time (hh:mm) 0 : 0

End Time (hh:mm) 00 : 00

Action Force On

How Often

Once

Weekdays

Sun Mon Tue Wed Thu Fri Sat

Monthly, on date 1

Cycle duration: 1 days (Cycle will start on the Start Date.)

Note:

Comment can only contain A-Z a-z 0-9 , . { } - _ () ^ \$! ~ ` |

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Schedule Setup	Check to enable the schedule.
Comment	Type a short description for such schedule.
Start Date (yyyy-mm-dd)	Specify the starting date of the schedule.
Start Time (hh:mm)	Specify the starting time of the schedule.
Duration Time (hh:mm)	Specify the duration (or period) for the schedule.
End Time (hh:mm)	It will be calculated automatically when Start Time and Duration Time are configured well.

Action	Specify which action should be applied during the period of the schedule. Force On -Force the connection to be always on. Force Down -Force the connection to be always down.
How Often	Specify how often the schedule will be applied. <ul style="list-style-type: none"> ● Once -The schedule will be applied just once ● Weekdays -Specify which days in one week should perform the schedule. ● Monthly, on date - The router will only execute the action applied such schedule on the date (1 to 28) of a month. ● Cycle duration - Type a number as cycle duration. Then, any action applied such schedule will be executed per several days. For example, "3" is selected as cycle duration. That means, the action applied such schedule will be executed every three days since the date defined on the Start Date.

3. Click OK button to save the settings.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

Office

Hour:

(Force On)

Mon - Sun

9:00 am

to

6:00 pm

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

II-5-5 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Vigor router can be operated as a RADIUS client. This web page is used to configure settings for external RADIUS server. Then LAN users of Vigor router will be authenticated and accounted by such server for network application.

Applications >> RADIUS

RADIUS Setup

RADIUS Server Status Log

[Refresh](#) | [Clear](#) |

Available settings are explained as follows:

Item	Description
Enable	Check to enable RADIUS client feature.
Comments	Enter a brief description.
Primary Server	Primary Server - Enter the IP address of RADIUS server. Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36

	<p>characters.</p> <p>Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.</p> <p>Retry - Enter a times number for sending the access request to the RADIUS server. When reaching the threshold of retry number, Vigor system will switch and send the request to the other RADIUS server (e.g., secondary server).</p>
Secondary Server	<p>Secondary Server - Enter the IP address of RADIUS server.</p> <p>Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.</p> <p>Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.</p> <p>Retry - Enter a times number for sending the access request to the RADIUS server. When reaching the threshold of retry number, Vigor system will switch and send the request to the primary RADIUS server.</p>
RADIUS Server Status Log	Display the record of current status of RADIUS server.

After finished the above settings, click OK button to save the settings.

II-5-6 Active Directory/LDAP

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform, inquire and modify the information within the directory, and acquire the data in the directory securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

II-5-6-1 General Setup

This page allows you to enable the function and specify general settings for LDAP server.

Applications >> Active Directory /LDAP

General Setup | Active Directory / LDAP Profiles | [Set to Factory Default](#)

Enable

Bind Type: Simple Mode

Server Address: [Text Input]

Destination Port: 389 Use SSL

Regular DN: [Text Input]

Regular Password: [Text Input]

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	Check to enable such function.
Bind Type	There are three types of bind type supported. <ul style="list-style-type: none">● Simple Mode - Just simply do the bind authentication without any search action.● Anonymous - Perform a search action first with Anonymous account then do the bind authentication.● Regular Mode- Mostly it is the same with anonymous mode. The different is that, the server will firstly check if you have the search authority. For the regular mode, you'll need to type in the Regular DN and Regular Password .
Server Address	Enter the IP address of LDAP server.
Destination Port	Type a port number as the destination port for LDAP server.
Regular DN	Type this setting if Regular Mode is selected as Bind Type .
Regular Password	Specify a password if Regular Mode is selected as Bind Type .

After finished the above settings, click OK button to save the settings.

II-5-6-2 Active Directory / LDAP Profiles

You can configure eight AD/LDAP profiles. These profiles would be used with User Management for different purposes in management.

Applications >> Active Directory /LDAP

Index	Name	Distinguished Name
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		

Click any index number link to open the following page.

Applications >> Active Directory /LDAP>>Server Profiles

Index No. 1

Name	<input type="text" value="RD1"/>
Common Name Identifier	<input type="text" value="UID"/>
Base Distinguished Name	<input type="text"/> 
Additional Filter	<input type="text"/>
Group Distinguished Name	<input type="text"/> 

Note:

Please type in your additional filter for BaseDN search request. For example, "gidNumber=500" for OpenLDAP, and "msNPAllowDialin=TRUE" for AD.

Available settings are explained as follows:

Item	Description
Name	Type a name for such profile. The length of the user name is limited to 19 characters.
Common Name Identifier	Type or edit the common name identifier for the LDAP server. The common name identifier for most LDAP server is "cn".
Additional Filter	Enter the condition for additional filter.
Base Distinguished Name / Group Distinguished Name	Type or edit the distinguished name used to look up entries on the LDAP server. Sometimes, you may forget the Distinguished Name since it's too long. Then you may click the  button to list all the account information on the AD/LDAP Server to assist you finish the setup.

After finished the above settings, click OK to save and exit this page. A new profile has been created.

II-5-7 UPnP

The UPnP (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router.

Info UPnP is required for some applications such as PPS, Skype, eMule...and etc. If you are not familiar with UPnP, it is suggested to turn off this function for security.

Applications >> UPnP

UPnP

<input type="checkbox"/> Enable UPnP Service	Default WAN ▾
<input type="checkbox"/> Enable Connection Control Service	
<input type="checkbox"/> Enable Connection Status Service	

Note:

To allow NAT pass-through to a UPnP enabled client the connection control service must also be enabled.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable UPNP Service	Accordingly, you can enable either the Connection Control Service or Connection Status Service.
Default WAN	It is used to specify the WAN interface for applying such function.

The reminder as regards concern about Firewall and UPnP:

Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

Security Considerations

Activating the UPnP function on your network may incur some security threats. You should consider carefully these risks before activating the UPnP function.

- Some Microsoft operating systems have found out the UPnP weaknesses and hence you need to ensure that you have applied the latest service packs and patches.
- Non-privileged users can control some router functions, including removing and adding port mappings.

The UPnP function dynamically adds port mappings on behalf of some UPnP-aware applications. When the applications terminate abnormally, these mappings may not be removed.

II-5-8 IGMP

IGMP is the abbreviation of *Internet Group Management Protocol*. It is a communication protocol which is mainly used for managing the membership of Internet Protocol multicast groups.

II-5-8-1 General Setting

Applications >> IGMP

General setting	Working status
<input type="checkbox"/> IGMP Proxy IGMP Proxy acts as a multicast proxy for hosts on the LAN side. Enable IGMP proxy to access any multicast group. This function takes no effect when Bridge Mode is enabled.	
Interface	WAN1 ▾
IGMP version	Auto ▾
General Query Interval	125 (seconds)
Add PPP header (Encapsulate IGMP in PPPoE)	<input type="checkbox"/>
Enable IGMP syslog	<input type="checkbox"/>
<input type="checkbox"/> IGMP Snooping Enable: Forwards multicast traffic only to ports that are members of that group. Disable: Treats multicast traffic the same as broadcast traffic.	

Available settings are explained as follows:

Item	Description
IGMP Proxy	<p>Check this box to enable this function. The application of multicast will be executed through WAN /PVC/VLAN port. In addition, such function is available in NAT mode.</p> <p>Interface - Specify an interface for packets passing through.</p> <p>IGMP version - At present, two versions (v2 and v3) are supported by Vigor router. Choose the correct version based on the IPTV service you subscribe.</p> <p>General Query Interval - Vigor router will periodically check which IP obtaining IPTV service by sending query. It might cause inconvenience for client. Therefore, set a suitable time (unit: second) as the query interval to limit the frequency of query sent by Vigor router.</p> <p>Add PPP header -Check this box if the interface type for IGMP is PPPoE. It depends on the specifications regulated by each ISP. If you have no idea to enable or disable, simply contact your ISP providers.</p> <p>Enable IGMP syslog - Check the box to send the record related to the IGMP server to Syslog.</p>
IGMP Snooping	<p>Check this box to enable this function. Multicast traffic will be forwarded to ports that have members of that group. Disabling IGMP snooping will make multicast traffic treated in the same manner as broadcast traffic.</p>

After finishing all the settings here, please click OK to save the configuration.

II-5-8-2 Working Groups

Applications >> IGMP

General setting

Working status

IGMP Device Table

Index	MAC Address	IP Address	Interface	IGMP Version
-------	-------------	------------	-----------	--------------

Available settings are explained as follows:

Item	Description
Refresh	Click this link to renew the working multicast group status.
Group ID	This field displays the ID port for the multicast group. The available range for IGMP starts from 224.0.0.0 to 239.255.255.254.
P1 to P4	It indicates the LAN port used for the multicast group.

II-5-9 Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN (WOL)** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as "Enable" on the BIOS setting.

Applications >> Wake on LAN

Wake on LAN

Wake by:

IP Address:

MAC Address: : : : : :

Result

Note:

Wake on LAN integrates with **Bind IP to MAC** function; only bound PCs can wake up through IP.

Available settings are explained as follows:

Item	Description
Wake by	Two types provide for you to wake up the binded IP. <ul style="list-style-type: none"> ● If you choose Wake by MAC Address, you have to Enter the correct MAC address of the host in MAC Address boxes. ● If you choose Wake by IP Address, you have to choose the correct IP address.
IP Address	The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list. Choose the IP address from the drop down list that you want to wake up.
MAC Address	Type any one of the MAC address of the bound PCs.
Wake Up	Click this button to wake up the selected IP. See the following figure. The result will be shown on the box.

II-5-10 SMS / Mail Alert Service

The function of SMS (Short Message Service)/Mail Alert is that Vigor router sends a message to user's mobile or e-mail box through specified service provider to assist the user knowing the real-time abnormal situations.

Vigor router allows you to set up to 10 SMS profiles which will be sent out according to different conditions.

II-5-10-1 SMS Alert

This page allows you to specify SMS provider, who will get the SMS, what the content is and when the SMS will be sent.

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	Enable	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)
1	<input type="checkbox"/>	1-???		1-???	
2	<input type="checkbox"/>	1-???		1-???	
3	<input type="checkbox"/>	1-???		1-???	
4	<input type="checkbox"/>	1-???		1-???	
5	<input type="checkbox"/>	1-???		1-???	
6	<input type="checkbox"/>	1-???		1-???	
7	<input type="checkbox"/>	1-???		1-???	
8	<input type="checkbox"/>	1-???		1-???	
9	<input type="checkbox"/>	1-???		1-???	
10	<input type="checkbox"/>	1-???		1-???	

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable such profile.
SMS Provider	Use the drop down list to choose SMS service provider. You can click SMS Provider link to define the SMS server.
Recipient Number	Enter the phone number of the one who will receive the SMS.
Notify Profile	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the SMS.
Schedule (1-15)	Enter the schedule number that the SMS will be sent out. You can click the Schedule(1-15) link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

II-5-10-2 Mail Alert

This page allows you to specify Mail Server profile, who will get the notification e-mail, what the content is and when the message will be sent.

Application >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	Enable	Mail Service	Mail Address	Notify Profile	Schedule(1-15)
1	<input type="checkbox"/>	1-???		1-???	
2	<input type="checkbox"/>	1-???		1-???	
3	<input type="checkbox"/>	1-???		1-???	
4	<input type="checkbox"/>	1-???		1-???	
5	<input type="checkbox"/>	1-???		1-???	
6	<input type="checkbox"/>	1-???		1-???	
7	<input type="checkbox"/>	1-???		1-???	
8	<input type="checkbox"/>	1-???		1-???	
9	<input type="checkbox"/>	1-???		1-???	
10	<input type="checkbox"/>	1-???		1-???	

Note:

All the Mail Alert profiles share the same "Sending Interval" setting if they use the same Mail Server.

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable such profile.
Mail Service	Use the drop down list to choose mail service object. All of the available objects are created in Object Settings>>SMS/Mail Service Object . If there is no object listed, click Mail Service link to define a new one with specified service provider.
Mail Address	Enter the e-mail address of the one who will receive the notification message.
Notify Profile	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the mail message.
Schedule (1-15)	Enter the schedule number that the notification will be sent out. You can click the Schedule(1-15) link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

II-5-11 Bonjour

Bonjour is a service discovery protocol which is a built-in service in Mac OS X; for Windows or Linux platform, there is correspondent software to enable this function for free.

Usually, users have to configure the router or personal computers to use above services. Sometimes, the configuration (e.g., IP settings, port number) is complicated and not easy to complete. The purpose of Bonjour is to decrease the settings configuration (e.g., IP setting). If the host and user's computer have the plug-in Bonjour driver install, they can utilize the service offered by the router by clicking the router name icon. In short, what the Clients/users need to know is the name of the router only.

To enable the Bonjour service, click **Application>>Bonjour** to open the following page. Check the box(es) of the server service(s) that you want to share to the LAN clients.

Applications >> Bonjour

Bonjour Setup

<input type="checkbox"/> Enable Bonjour Service
<input type="checkbox"/> HTTP Server
<input type="checkbox"/> Telnet Server
<input type="checkbox"/> FTP Server
<input type="checkbox"/> SSH Server
<input type="checkbox"/> LPR Printer Server

OK

Cancel

Below shows an example for applying the Bonjour feature that Vigor router can be used as the FTP server.

1. Here, we use Firefox and DNSSD to discover the service in such case. Therefore, just ensure the Bonjour client program and DNSSD for Firefox have been installed on the computer.

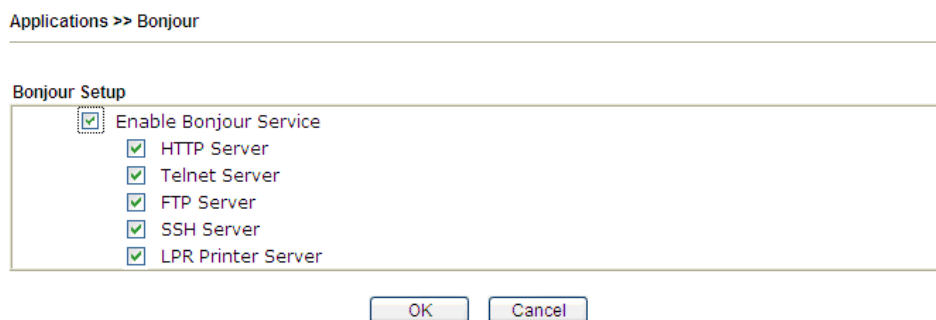

- Open the web browser, Firefox. If Bonjour and DNSSD have been installed, you can open the web page (DNSSD) and see the following results.

- Open **System Maintenance >> Management**. Type a name as the Router Name and click **OK**.

- Next, open **Applications >> Bonjour**. Check the service that you want to use via Bonjour.

- Open the DNSSD page again. The available items will be changed as the follows. It means the Vigor router (based on Bonjour protocol) is ready to be used as a printer server, FTP server, SSH Server, Telnet Server, and HTTP Server.

DNSSD for Firefox

Browser Configuration Options Diagnostic Information

Interface	Name	Type	Domain	Service Info
2	DS1010Plus	_http._tcp.	local.	Select a service on the left to view further details.
2	DS1010Plus(WebDAV)	_http._tcp.	local.	
2	HP LaserJet 1300	_ipp._tcp.	local.	
2	Vigor Router	_ftp._tcp.	local.	
2	Vigor Router	_http._tcp.	local.	
2	Vigor Router	_printer._tcp.	local.	
2	Vigor Router	_ssh._tcp.	local.	
2	Vigor Router	_telnet._tcp.	local.	
2	tctseng-virtual-machine	_udisks-ssh._tcp.	local.	
2	tctseng-virtual-machine [00:0c:29:78:bc:24]	_workstation._tcp.	local.	
2	tomkao-desktop [00:0c:29:26:09:5d]	_workstation._tcp.	local.	

- Now, any page or document can be printed out through Vigor router (installed with a printer).

Application Notes

A-1 How to use DrayDDNS?

Vigor router supports various DDNS service providers, user can set up user-defined profile to update the DDNS even the service provider is not on the list. Now, DrayTek starts to support our own DDNS service - DrayDDNS. We will provide a domain name for each Vigor Router, this single domain name can record IP addresses of all WAN.

Activate DrayDDNS License

1. Go to **Wizards >> Service Activation Wizard**, wait for the router to connect to MyVigor server, then tick **DT-DDNS** and **I have read and accept the above Agreement**, click **Next**.

Service Activation Wizard

Select the service type that you want to activate

Activation Date : 2017-02-23

Web Content Filter(WCF) Service :

BPJM [License Agreement](#)
This is a web content filter that is provided by the German government. It is a free service without any guarantee and will expire one year after activation. You may re-activate the service after expiry.

Cyren 30-Days Free Trial [License Agreement](#)
This is a worldwide web content filter service. The free trail license can only be used once. At the end of the free trail period you may purchase the official one-year Cyren Web Content Filter from an authorized DrayTek reseller.

APP Enforcement(APPE) Service :

DT-APPE [License Agreement](#)
Upgrade APPE Signature automatically.

Dynamic DNS(DDNS) Service :

DT-DDNS [License Agreement](#)
This is a Dynamic Domain Name Service that is provided by DrayTek company. It is a free service will expire 1 year after activation. You may re-activate the service after expiry.

Domain Name : .draydns.com

*** Please note that the DrayDDNS service is currently for internal use only.**

I have read and accept the above Agreement. (Please check this box).

2. Confirm the information, then click **Activate**.

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
Service Activated : Dynamic DNS (.draydns.com)

Please click **Back** to re-select service type you to activate.

- MyVigor server will reply with the service activation information.

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter	---	---	Not Activated
APP Enforcement	---	---	Not Activated
DDNS	2017-02-23	2018-02-23	DT-DDNS

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

Configure DDNS Profile

- Go to Applications >> Dynamic DNS Setup,
 - Tick Enable Dynamic DNS Setup
 - Click an available profile index
 - Tick Enable Dynamic DNS Account
 - Select DrayTek Global (www.drayddns.com) as Service Provider
 - Select the WAN you would like to upload the IP to DDNS server
 - Click Get domain
 - Click OK on the pop up notification window

Applications >> Dynamic DNS Setup

Dynamic DNS Setup | Set to Factory Default |

Enable Dynamic DNS Setup View Log Force Update

A-2 How to Configure Customized DDNS?

This article describes how to configure customized DDNS on Vigor routers to update your IP to the DDNS server. We will take "Changeip.org" and "3322.net" as example. Before setting, please make sure that the WAN connection is up.

Part A : Changeip.org

Physical Connection			System Uptime: 0day 2:25:59		
IPv4		IPv6			
LAN Status		Primary DNS: 168.95.192.1		Secondary DNS: 168.95.1.1	
IP Address	TX Packets	RX Packets			
10.1.7.1	2069	1036			
WAN 1 Status					>> Drop PPPoE
Enable	Line	Name	Mode	Up Time	
Yes	Ethernet	iwiz	PPPoE	2:25:53	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
1.169.185.242	168.95.98.254	14851	9506	11281	912

Note that,

Username: jo***

Password: jo*****

Host name: j*****.changeip.org

WAN IP address: 1.169.185.242

Following is the screenshot of editing the HTML script on the browser to update your IP to the DDNS server.

```
← → ↻ www.changeip.com/dynamic/dns/update.asp?u=jo...&p=jo...&host...
免費的 Hotmail 建議的網站 Home Page 網頁快訊圖庫 從 IE 匯入 Go

200 Successful Update (Address Used: 1.169.185.242)

Updated target: j...changeip.org
Updated 1 host records
Updated 0 zone serial numbers
Reviewed 1 possible records
Total updates: 75
Lockout counter: 1 out of 60
Lockout reset: 60 mins
Elapsed time: 0.01 seconds
NIC version: 2.68

For XML output add &xml=1
Use SSL for better security.
```

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for Customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

Enable Dynamic DNS Account

WAN Interface:

Service Provider:

Provider Host:

Service API:

Auth Type:

Connection Type:

Server Response:

Login Name: (max. 64 characters)

Password: (max. 23 characters)

Wildcards

Backup MX

Mail Extender:

Determine Real WAN IP:

2. Set the Service Provider as **Customized**.
3. Set the Service API as:
/dynamic/dns/update.asp?u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP### &cmd=update&offline=0

In which, ###IP### is a value which will be replaced with the current interface IP address automatically when DDNS service is running. In this case the IP will be 1.169.185.242.

4. After setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server.

Part B : 3322.net

WAN 1	
Link Status	: Connected
MAC Address	: 00-50-7F-C8-C6-A1
Connection	: PPPoE
IP Address	: 111.243.178.53
Default Gateway	: 168.95.98.254
Primary DNS	: 168.95.192.1
Secondary DNS	: 168.95.1.1

Username: bi*****

Password: 88*****

Host name: bi*****.3322.org

WAN IP address: 111.243.178.53

To update the IP to the DDNS server via editing the HTML script, we can Enter the following script on the browser:

And the result will be :

“good 111.243.178.53” means our IP has been updated to the server successfully.

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for Customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

Enable Dynamic DNS Account

WAN Interface: WAN1 First

Service Provider: Customized

Provider Host: members.3322.net

Service API: /dyndns/update?hostname=yourhost.3322.org&myip=###IP###&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO

Auth Type: basic

Connection Type: Http

Server Response:

Login Name: chronic6653 (max. 64 characters)

Password: ***** (max. 23 characters)

Wildcards

Backup MX

Mail Extender:

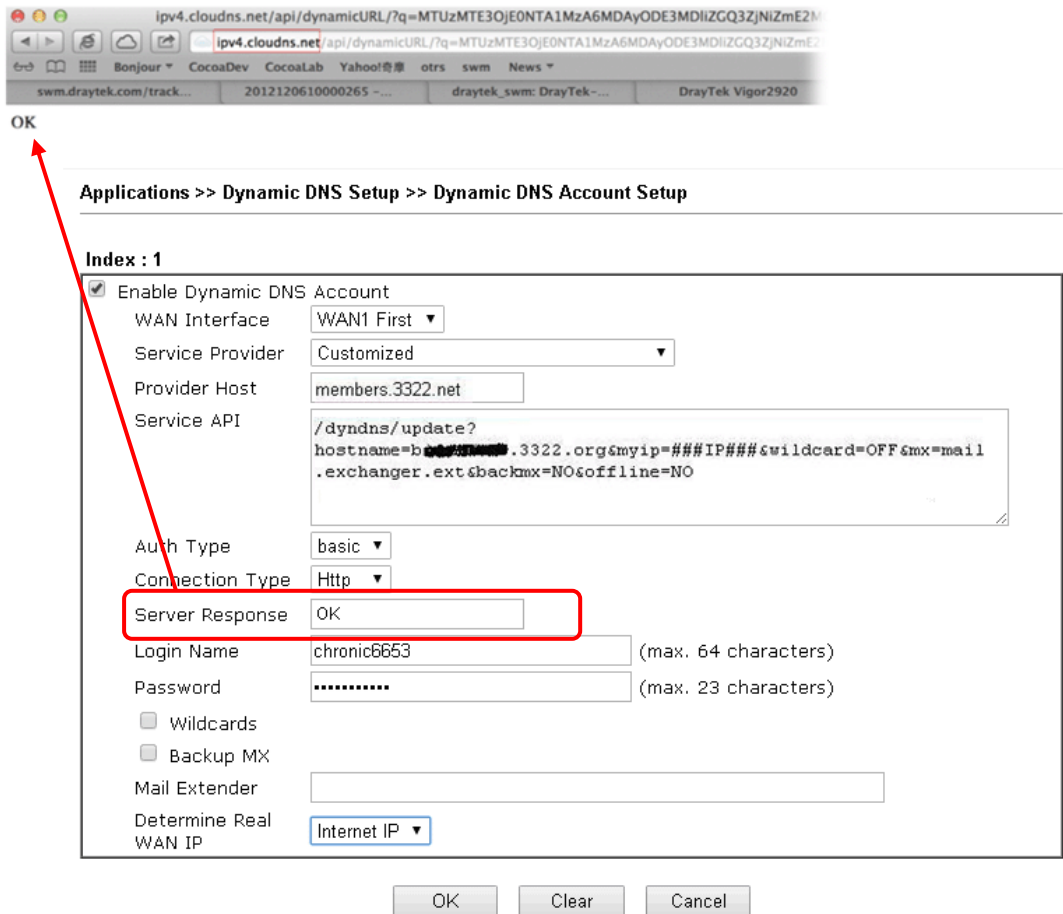

Determine Real WAN IP: Internet IP

OK Clear Cancel

2. Set the Service Provider as **Customized**.
3. Set the Provider Host as **member.3322.net**.
4. Set the Service API as:
/dyndns/update?hostname=yourhost.3322.org&myip=###IP###&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO
5. Enter your account and password.
6. After the setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server automatically.

Part C : Extend Note

The customized Service Provider is also eligible with the ClouDNS.net.

The screenshot shows a web browser window with the URL `ipv4.cloudns.net/api/dynamicURL/?q=MTUzMTE3OjE0NTA1MzA6MDAyODE3MDIiZGQ3ZjNiZmE2M...`. Below the browser, the text "OK" is displayed. A red arrow points from the "OK" text to the "Server Response" field in the "Dynamic DNS Account Setup" form. The form is titled "Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup" and includes the following fields:

- Enable Dynamic DNS Account
- WAN Interface: WAN1 First
- Service Provider: Customized
- Provider Host: members.3322.net
- Service API: `/dyn dns/update?hostname=b...3322.org&myip=##IP##&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO`
- Auth Type: basic
- Connection Type: Http
- Server Response: OK (highlighted with a red box)
- Login Name: chronic6653 (max. 64 characters)
- Password: (max. 23 characters)
- Wildcards
- Backup MX
- Mail Extender: (empty field)
- Determine Real WAN IP: Internet IP

At the bottom of the form are three buttons: OK, Clear, and Cancel.

II-6 Routing

Route Policy (also well known as PBR, policy-based routing) is a feature where you may need to get a strategy for routing. The packets will be directed to the specified interface if they match one of the policies. You can setup route policies in various reasons such as load balance, security, routing decision, and etc.

Through protocol, IP address, port number and interface configuration, Route Policy can be used to configure any routing rules to fit actual request. In general, Route Policy can easily reach the following purposes:

Load Balance

You may manually create policies to balance the traffic across network interface.

Specify Interface

Through dedicated interface (WAN/LAN/VPN), the data can be sent from the source IP to the destination IP.

Address Mapping

Allows you specify the outgoing WAN IP address (es) for an internal private IP address or a range of internal private IP addresses.

Priority

The router will determine which policy will be adopted for transmitting the packet according to the priority of Static Route and Route Policy.

Failover to/Failback

Packets will be sent through another Interface or follow another Policy when the original interface goes down (**Failover to**). Once the original interface resumes service (**Failback**), the packets will be returned to it immediately.

Other routing

Specify routing policy to determine the direction of the data transmission.

Info

For more detailed information about using policy route, refer to Support >>FAQ/Application Notes on www.draytek.com.

Web User Interface

II-6-1 Static Route

Static routing is an alternative to dynamic routing. It is a process that the system network administrator can configure network routers with all the required information for packet forwarding.

Go to **Routing >> Static Route**. The router offers IPv4 and IPv6 for you to configure the static route. Both protocols bring different web pages.

Static Route for IPv4

Routing >> Static Route Setup

IPv4		IPv6	Set to Factory Default		View Routing Table	
Index	Enable	Destination Address	Mask	Gateway	Interface	
<u>1.</u>	<input type="checkbox"/>					
<u>2.</u>	<input type="checkbox"/>

Backup

Click it to backup the configuration of static route settings.

Restore

Click it to restore the configuration of static route settings. Before clicking, make sure upload the configuration file onto Vigor router.

Add Static Routes to Private and Public Networks

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the RIP Protocol Control. Then click the **OK** button.

Info

There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **Routing >> Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

Routing >> Static Route Setup

Index No. 1

Enable

Destination IP Address: ???

Subnet Mask: 255.255.255.255 / 32 ▼

Dest Port End	Display the IP address for the end of the destination port.
Move UP/Move Down	Use Up or Down link to move the order of the policy.
Wizard Mode	Allow to configure frequently used settings of route policy via three setting pages
Advance Mode	Allow to configure detailed settings of route policy.

To use Wizard Mode, simple do the following steps:

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Routing >> Load-Balance/Route Policy

Index: 1 Criteria

Load-Balance/Route Policy applies to packets that meet the following criteria

Source IP Any
 Src IP Start Src IP End
 ~

Destination IP Any
 Dest IP Start Dest IP End
 ~

Available settings are explained as follows:

Item	Description
Source IP	<p>Any - Any IP can be treated as the source IP.</p> <p>Src IP Start - Enter the source IP start for the specified WAN interface.</p> <p>Src IP End - Enter the source IP end for the specified WAN interface. If this field is blank, it means that all the source IPs inside the LAN will be passed through the WAN interface.</p>
Destination IP	<p>Any - Any IP can be treated as the destination IP.</p> <p>Dest IP Start- Enter the destination IP start for the specified WAN interface.</p> <p>Dest IP End - Enter the destination IP end for the specified WAN interface. If this field is blank, it means that all the destination IPs will be passed through the WAN interface.</p>

3. Click **Next** to get the following page.

Routing >> Load-Balance/Route Policy

Index: 1 Interface

Load-Balance/Route Policy directs the packets to the interface below

Interface WAN1

WAN1
 LAN1
 LAN2
 LAN3
 LAN4
 IP Routed Subnet

Available settings are explained as follows:

Item	Description
Interface	Use the drop down list to choose a WAN or LAN interface or VPN profile. Packets match with the above criteria will be transferred to the interface chosen here.

- After specifying the interface, click **Next** to get the following page.

Load-Balance/Route Policy

Index: 1 NAT or Routing

Based on the settings in the previous pages, we guess you want to have: Force NAT

The current setting is:

Force NAT

Force Routing

Available settings are explained as follows:

Item	Description
Force NAT /Force Routing	It determines which mechanism that the router will use to forward the packet to WAN.

- After choosing the mechanism, click **Next** to get the summary page for reference.

Load-Balance/Route Policy

Index: 1 Configuration Summary

Criteria

Source IP Any

Destination IP 192.168.1.6 ~ 192.168.1.66

Interface

WAN1

More options

Force NAT

- If there is no error, click **Finish** to complete wizard setting.

To use **Advance Mode**, do the following steps:

1. Click the **Advance Mode** radio button.
2. Click any **Index** number link (e.g., 1 in this case) to access into the following page.

Analyze

Available settings are explained as follows:

Item	Description
Mode	<p>Analyze a single packet - Choose such mode to make Vigor router analyze how a single packet will be sent by a route policy.</p> <p>Analyze multiple packets... - Choose such mode to make Vigor router analyze how multiple packets in a specified file will be sent by a route policy.</p>

<p>Packet Information</p>	<p>Specify the nature of the packets to be analyzed by Vigor router.</p> <p>Protocol - Specify a protocol(ICMP/UDP/TCP/ANY) for diagnosis.</p> <p>Src IP - Type an IP address as the source IP.</p> <p>Dst IP - Type an IP address as the destination IP.</p> <p>Dst Port - Use the drop down list to specify the destination port.</p> <p>Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page.</p>
<p>Input File</p>	<p>It is available when "Analyze multiple packets.." is selected as the Mode.</p> <p>Select - Click the download link to get a blank example file. Then, click such button to select that blank ".csv" file for saving the result of analysis.</p> <div data-bbox="715 763 1380 1077" data-label="Image"> </div> <p>Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page.</p> <p>Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.</p>

Application Notes

A-1 How to set up Address Mapping with Route Policy?

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

This document introduces how to set up address mapping with Route Policy. When a WAN interface has multiple public IP addresses, Administrator may specify the outgoing IP for certain internal IP address by a Route Policy.

1. Set up WAN IP Alias. Go to WAN >> Internet Access >> Details Page, and click on WAN IP Alias button.

Index	Enable	Aux. WAN IP
1.	<input checked="" type="checkbox"/>	---
2.	<input checked="" type="checkbox"/>	172.17.1.1
3.	<input checked="" type="checkbox"/>	172.17.2.2
4.	<input type="checkbox"/>	0.0.0.0
5.	<input type="checkbox"/>	0.0.0.0
6.	<input type="checkbox"/>	0.0.0.0
7.	<input type="checkbox"/>	0.0.0.0
8.	<input type="checkbox"/>	0.0.0.0

<< 1-8 | 9-16 | 17-24 | 25-32 >> **Next** >>

- a. Check Enable.
- b. Enter the WAN IP address.
- c. Click OK to save.

After setting up the WAN IP Alias, the IP addresses will be shown in the drop-down list of Interface in Route Policy setting.

2. Go to **Routing>>Load Balance/Route policy**. Create a Route Policy for specific IP address to send from specific WAN IP Address.

Routing >> Load-Balance/Route Policy

Index: 1

Enable

Comment:

Criteria

Protocol:

Source: Start: End:

Destination:

Destination Port:

Send via if Criteria Matched

Interface: WAN/LAN VPN

Gateway: Default Gateway Specific Gateway

Packet Forwarding to WAN/LAN via: Force NAT Force Routing

Failover to: WAN/LAN VPN Route Policy

Gateway: Default Gateway Specific Gateway

- a. Enable this policy.
 - b. Enter **Source IP** as the range of private IP address.
 - c. Leave the Destination IP and Port as **Any**.
 - d. Select **Interface** as WAN, and then select Interface address from the drop-down list. (The List can be edited in **WAN IP Alias** setting.)
 - e. Enable **Failover to** other WAN so the traffic will be sent via other Interface when the path fails. But do not enable this option if you want the traffic only to use a designated IP address.
 - f. Click **OK** to save.
3. After the above configuration, packet source from the range between 192.168.1.20 and 192.168.1.30 sent to the Internet will use the public IP 172.17.1.1.

A-2 How to use destination domain name in a route policy?

Route Policy supports using a domain name as destination criteria. It provides a more direct way to set up route policies if the network administrator is trying to specify the gateway for the traffic that destined for a certain website.

To use a destination domain name as criteria, just select **Domain Name** as **Destination** in **Criteria**, and enter the domain name in the empty field.

Criteria

Protocol: Any

Source: IP Range

Start: 192.168.1.20 End: 192.168.1.30

Destination: Domain Name

-server1.draytek.com [Select] [Delete]

Add

Destination Port: Any

Or you may click **Select**, and use a string that is pre-defined in **Objects Settings >> String Object** as the domain name.

192.168.1.1/doc/strobjslt.htm

Objects Setting >> String Object

Index	String
<input type="radio"/>	1 Floor_1
<input type="radio"/>	32 Floor_2

Load-Balance/Route Policy

Index: 1

Enable

Comment: Floor_1

Criteria

Protocol: Any

Source: IP Range

Start: 192.168.1.20 End: 192.168.1.30

Destination: Domain Name

-server1.draytek.com [Select] [Delete]

Add

Destination Port: Any

Send via if Criteria Matched

Click **Add** too add more domain names, we can set up to 5 domain names in one route policy.

Start: 192.168.1.20 End: 192.168.1.30

Destination: Domain Name

34 - portal.draytek.com [Select] [Delete]

- server2.draytek.com [Select] [Delete]

- server3.draytek.com [Select] [Delete]

- server4.draytek.com [Select] [Delete]

Add(up to 5)

Destination Port: Any

Send via if Criteria Matched

Auto-create String Objects

If you manually enter the domain name in a route policy, after clicking OK to apply the route policy, those domain names will be given a number.

Start: 192.168.1.20 End: 192.168.1.30

Destination: Domain Name

34	portal.draytek.com	Select	Delete
103	server2.draytek.com	Select	Delete
104	server3.draytek.com	Select	Delete
105	server4.draytek.com	Select	Delete

Add(up to 5)

Destination Port: Any

Send via if Criteria Matched

That means the router has automatically created string objects for those domain names, so that they can be used in other route policies or other functions.

A-3 How to use a Public IP on LAN

We cannot disable NAT on Vigor Router, but still, we may can use a public IP address on a host behind Vigor Router. If our ISP allocates a block public IP addresses for us, then we may use the public IP address with IP Routed Subnet or Routing Usage LAN.

Suppose ISP provides a public IP subnet 211.100.200.152/255.255.255.248 for us, and the gateway IP is 211.100.200.158. The public IP addresses we can use are between 211.100.200.153 to 211.100.200.157. The following shows how to set up a non-NAT subnet so that the server behind Vigor Router can use the public IP address 211.100.200.154.

WAN Setup

Go to **WAN >> Internet Access** and configure the WAN connection according to what ISP provides. (Note: If it is necessary to specify an IP address manually, remember that subnet mask for WAN interface should be larger than that of LAN interface.)

WAN >> Internet Access

WAN 2		PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input checked="" type="radio"/> Enable <input type="radio"/> Disable		Keep WAN Connection <input type="checkbox"/> Enable PING to keep alive PING to the IP <input type="text"/> PING Interval <input type="text"/> minute(s)			
IP Network Settings <input checked="" type="radio"/> Obtain an IP address automatically More Options <input type="button" value="v"/> Router Name <input type="text"/> Max: 39 characters Domain Name <input type="text"/> Max: 39 characters <input checked="" type="checkbox"/> Enable DHCP Client Identifier Username <input type="text"/> 86623721@hinet.net Password <input type="password"/>		TTL <input checked="" type="checkbox"/> Change the TTL value			
<input type="radio"/> Specify an IP address IP Address <input type="text"/> 211.100.200.153 Subnet Mask <input type="text"/> 255.255.255.240 Gateway IP Address <input type="text"/> 255.255.255.158 <input type="button" value="WAN IP Alias"/>		RIP Routing <input type="checkbox"/> Enable RIP			
DNS Server IP Address Primary Server <input type="text"/> 8.8.8.8 Secondary Server <input type="text"/> 8.8.4.4		Bridge Mode <input type="checkbox"/> Enable Bridge Mode Bridge Subnet <input type="text"/> LAN 1			
WAN Connection Detection Mode <input type="text"/> ARP Detect		MAC Address <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Use the following MAC Address <input type="text"/> 00:1D:AA:93:0D:1E			
MTU <input type="text"/> 1500 <input type="button" value="Path MTU Discovery"/>					

Now we have two methods to configure it

- IP Routed LAN
- Routing Usage LAN

IP Routed LAN Setup

1. Go to LAN >> General Setup, click on Details Page for IP Routed Subnet.

LAN >> General Setup

General Setup

Index	Enable	DHCP	IP Address		
LAN 1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.1.1	Details Page	IPv6
LAN 2	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.2.1	Details Page	IPv6
LAN 3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.3.1	Details Page	IPv6
LAN 4	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.4.1	Details Page	IPv6
IP Routed Subnet	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.0.1	Details Page	

[DHCP Server Option](#)

2. Set up TCP/IP details for IP Routed Subnet.

LAN >> General Setup

TCP/IP and DHCP Setup for IP Routed Subnet

Index	Matched MAC Address	given IP Address
-------	---------------------	------------------

Network Configuration

Enable Disable

For Routing Usage

IP Address: 211.100.200.153

Subnet Mask: 255.255.255.0 / 24

RIP Protocol Control: Disable

DHCP Server Configuration

Start IP Address: []

IP Pool Counts: 0 (max. 32)

Lease Time: 259200 (s)

Use LAN Port P1 P2

Use MAC Address

- a. Enable IP Routed Subnet.
 - b. Enter the IP Address for the router. Note that this could be the same as router's WAN IP.
 - c. Enter the Subnet Mask according to ISP.
3. For the host behind Vigor Router to obtain the public IP address, we may:
 - a. Configure a fixed IP/Subnet Mask on the host
 - b. Set up DHCP IP Pool, enable Use LAN Port, and connect the host to the router on the specified LAN port (which is port 1 and 2 in this example)

LAN >> General Setup

TCP/IP and DHCP Setup for IP Routed Subnet

Index	Matched MAC Address	given IP Address
-------	---------------------	------------------

Network Configuration

Enable Disable

For Routing Usage

IP Address: 211.100.200.153

Subnet Mask: 255.255.255.0 / 24

RIP Protocol Control: Disable

DHCP Server Configuration

Start IP Address: []

IP Pool Counts: 0 (max. 32)

Lease Time: 259200 (s)

Use LAN Port P1 P2

Use MAC Address

- c. Set up DHCP IP pool, enable Use MAC Address, add the host's MAC address to the table, and connect the host to the router from any of the LAN ports.

TCP/IP and DHCP Setup for IP Routed Subnet

Network Configuration <input checked="" type="radio"/> Enable <input type="radio"/> Disable For Routing Usage IP Address: 211.100.200.153 Subnet Mask: 255.255.255.0 / 24 RIP Protocol Control: Disable		DHCP Server Configuration Start IP Address: <input type="text"/> IP Pool Counts: 0 (max. 32) Lease Time: 259200 (s) <input checked="" type="checkbox"/> Use LAN Port <input checked="" type="checkbox"/> P1 <input checked="" type="checkbox"/> P2 <input checked="" type="checkbox"/> Use MAC Address <table border="1"> <thead> <tr> <th>Index</th> <th>Matched MAC Address</th> <th>given IP Address</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>00 : 1D : AA : 11 : 11 : 11</td> <td></td> </tr> </tbody> </table>		Index	Matched MAC Address	given IP Address	0	00 : 1D : AA : 11 : 11 : 11	
Index	Matched MAC Address	given IP Address							
0	00 : 1D : AA : 11 : 11 : 11								

After finishing above configurations, host with a public IP 211.100.200.154/ mask 255.255.255.248/ Gateway IP 211.100.200.153 will be able to access Internet through Vigor Router.

Routing Usage LAN

We may also create a LAN subnet for routing usage. Here we take LAN 2 for example.

1. Go to LAN >> VLAN,

LAN >> VLAN Configuration

VLAN Configuration

Enable

VLAN	LAN			Subnet	VLAN Tag		
	P1	P2	P3		Enable	VID	Priority
VLAN0	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	LAN 2	<input type="checkbox"/>	0	0
VLAN2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

- a. Enable VLAN Configuration.
 - b. Set up a VLAN for LAN2 Subnet.
 - c. Specify the LAN ports that belongs to LAN2 subnet (which is port 5 and 6 in this example), note that these are the ports to which the host should connect.
2. Go to LAN >> General Setup, click on Details Page for LAN 2.

LAN >> General Setup

General Setup

Index	Enable	DHCP	IP Address		
LAN 1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.1.1	Details Page	IPv6
LAN 2	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.2.1	Details Page	IPv6
LAN 3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.3.1	Details Page	IPv6

IP Routed Subnet	<input type="checkbox"/>	<input checked="" type="checkbox"/>	192.168.0.1	Details Page	

DHCP Server Option

3. Set up TCP/IP details for LAN 2,

LAN >> General Setup

LAN 2 Ethernet TCP / IP and DHCP Setup	LAN 2 IPv6 Setup
Network Configuration <input checked="" type="radio"/> Enable <input type="radio"/> Disable <input type="radio"/> For NAT Usage <input checked="" type="radio"/> For Routing Usage IP Address: 211.100.200.153 Subnet Mask: 255.255.255.248 / 29	DHCP Server Configuration <input type="radio"/> Disable <input checked="" type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent Start IP Address: 211.100.200.154 IP Pool Counts: 100 (max. 253) Gateway IP Address: 211.100.200.153 Lease Time: 259200 (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients

- Enable LAN2.
- Select For Routing Usage.
- Enter the IP Address for the router. Note that this could be the same as router's WAN IP.
- Enter the Subnet Mask according to ISP.

4. For DHCP Server Configuration, we may either:

- Disable DHCP Server, and manually set a fixed IP/Subnet Mask on the host.

LAN >> General Setup

LAN 2 Ethernet TCP / IP and DHCP Setup	LAN 2 IPv6 Setup
Network Configuration <input checked="" type="radio"/> Enable <input type="radio"/> Disable <input type="radio"/> For NAT Usage <input checked="" type="radio"/> For Routing Usage IP Address: 211.100.200.153 Subnet Mask: 255.255.255.248 / 29	DHCP Server Configuration <input checked="" type="radio"/> Disable <input type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent DNS Server IP Address Primary IP Address: <input type="text"/> Secondary IP Address: <input type="text"/>

OK

- Enable DHCP Server, and set up the DHCP IP pool according to IP range which the ISP provides.

LAN >> General Setup

LAN 2 Ethernet TCP / IP and DHCP Setup	LAN 2 IPv6 Setup
Network Configuration <input checked="" type="radio"/> Enable <input type="radio"/> Disable <input type="radio"/> For NAT Usage <input checked="" type="radio"/> For Routing Usage IP Address: 211.100.200.153 Subnet Mask: 255.255.255.248 / 29	DHCP Server Configuration <input type="radio"/> Disable <input checked="" type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent Start IP Address: 211.100.200.154 IP Pool Counts: 100 (max. 253) Gateway IP Address: 211.100.200.153 Lease Time: 259200 (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients

After finishing the above configurations, PC or Server that connects to Port 5 or Port 6 with IP settings as IP 211.100.200.154/ mask 255.255.255.252/ Gateway IP 211.100.200.153 will be able to access Internet through Vigor Router.

Trouble-shooting

If PC with public IP address setting cannot access Internet after above configuration, please check:

- If the public IP address has been used by another device.
- If the router's WAN Access Mode is "Static or Dynamic IP", make sure the subnet mask of WAN interface is larger than that of LAN interface.

If none of the above helps, please change the host's Gateway IP from Vigor Router's IP (211.100.200.153) to the IP Gateway IP (211.100.200.158), and connect the PC to the ISP Modem directly and see if it can work.

A-4 Introduction to Load Balance/Route Policy

This document introduces the Load-Balance/Route Policy. This feature allows network administrator to manage the outbound traffic more specifically.

The Policy set in Load-Balance/Route Policy always has higher priority than Default Route and Auto Load Balance set in WAN >> **General Setup**, and always has lower priority than the Firewall Rules. Administrator may also define a priority to this policy.

To configure Route Policy, go to **Routing>>Load-Balance/Route Policy**. The following image is a screen-shot of Load-Balance/Route policy page. It lists all the policies and shows whether the policy is enabled, what are the criteria to match, and through which the interface should the traffic to go if the criteria are matched, and also its priority.

Routing >> Load-Balance/Route Policy ?

<< [1-10](#) | [11-20](#) >> [Next](#) >>

Wizard Mode: most frequently used settings in three pages
 Advance Mode: all settings in one page

To set up a Route Policy, just click on an Index number. At the bottom of the page, there are two configuration modes could be choose: the Wizard Mode provides a simple and basic configuration; while Advance Mode allows more options.

1. First, set the criteria of the packets to apply this policy.

Routing >> Load-Balance/Route Policy

Index: 1

Enable

Comment

Criteria

Protocol

Source
 Start: End:

Destination
 Start: End:

Destination Port

Send via if Criteria Matched

Interface

- a. Select a Protocol.
- b. Enter the Source IP address range, the Source IP could be a single address if the Start and End are the same.

- c. Enter the Destination IP address range.
- d. Select the Destination Port.

The above configuration is an example that if a packet is sent from 192.168.1.10~192.168.1.100 to 8.8.8.8, no matter what the protocol or destination port is, it will follow this route policy.

2. Next, we select an interface and gateway through which should the packet be sent if it matches the criteria.

Send via if Criteria Matched

Interface	<input checked="" type="radio"/> WAN/LAN <input type="radio"/> VPN	LAN1 VPN 1.???
Gateway	<input type="radio"/> Default Gateway <input checked="" type="radio"/> Specific Gateway	
Packet Forwarding to WAN/LAN via	<input checked="" type="radio"/> Force NAT <input type="radio"/> Force Routing	

- a. Select an Interface.
- b. Select a Gateway IP. Note that if Interface is chosen to be a LAN, it is necessary to designate a specific gateway.

The above configuration is an example that if a packet matches the criteria of this Route Policy, it will be sent to the default gateway then the destination through VPN1.

3. In **Advance Mode**, if the Interface is selected as WAN or VPN, there are some more options:

Interface	<input checked="" type="radio"/> WAN/LAN <input type="radio"/> VPN	WAN1 VPN 1.???
Gateway	<input type="radio"/> Default Gateway <input checked="" type="radio"/> Specific Gateway	
Packet Forwarding to WAN/LAN via	<input checked="" type="radio"/> Force NAT <input type="radio"/> Force Routing	
<input type="checkbox"/> Failover to	<input checked="" type="radio"/> WAN/LAN <input type="radio"/> VPN <input type="radio"/> Route Policy	Default WAN VPN 1.??? Index 1
Gateway	<input checked="" type="radio"/> Default Gateway <input type="radio"/> Specific Gateway	0.0.0.0

Priority

Priority:

Low High
 250 150 0
Default Route Routes in Routing Table

- **Failover to:** Enables packet to be sent through other Interface or follow another Policy when detects a path failure in the original interface. The above configuration indicates that the packets will be sent through WAN2 when the original route is disconnected.
- **Priority:** Administrator may set priority between 1 and 249 for this Route policy, where smaller number indicates higher priority. When two policies are having the same priority, the first (according to the policy index order) matched policy will be implemented.

This page is left blank.

Part III Wireless LAN

Wireless

Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

III-1 Wireless LAN (2.4GHz/5GHz)

This function is used for "n" and "ac" models only.

Over recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches or is capable of reaching virtually every location on the surface of the earth. Hundreds of millions of people exchange information every day via wireless communication products. The Vigor2915 wireless series router (with "n", "n-plus" or "ac" in model name) is designed for maximum flexibility and efficiency of a small office/home. Any authorized staff can bring a built-in WLAN client PDA or notebook into a meeting room for conference without laying a clot of LAN cable or drilling holes everywhere. Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

The Vigor wireless routers are equipped with a wireless LAN interface compliant with the standard IEEE 802.11n draft 2 protocol. To boost its performance further, the Vigor Router is also loaded with advanced wireless technology to lift up data rate up to 300 Mbps*. Hence, you can finally smoothly enjoy stream music and video.

Vigor2915 wireless router is a highly integrated wireless local area network (WLAN) for 5 GHz 802.11ac or 2.4/5 GHz 802.11n WLAN applications. It supports channel operations of 20/40 MHz at 2.4 GHz and 20/40/80 MHz at 5 GHz. Vigor2915 "ac" series router can support data rates up to 1.3 Gbps in 802.11ac 80 MHz channels. Vigor2915 "n" series router supports 802.11n up to 300 Mbps for 40 MHz channel operations.

Info

The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The **General Settings** will set up the information of this wireless network, including its SSID as identification, located channel etc.

Multiple SSIDs

Vigor router supports four SSID settings for wireless connections. Each SSID can be defined with different name and download/upload rate for selecting by stations connected to the router wirelessly.

Real-time Hardware Encryption

Vigor Router is equipped with a hardware AES encryption engine so it can apply the highest protection to your data without influencing user experience.

Complete Security Standard Selection

To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key is used for encryption during data transmission. WPA applies Temporal Key Integrity Protocol (TKIP) for data encryption while WPA2 applies AES. The WPA-Enterprise combines not only encryption but also authentication.

Since WEP has been proved vulnerable, you may consider using WPA for the most secure connection. You should select the appropriate security mechanism according to your needs. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

Info

The password (PSK) of default security mode is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

Separate the Wireless and the Wired LAN- WLAN Isolation

It enables you to isolate your wireless LAN from wired LAN for either quarantine or limit access reasons. To isolate means neither of the parties can access each other. To elaborate an example for business use, you may set up a wireless LAN for visitors only so they can connect to Internet without hassle of the confidential information leakage. For a more flexible deployment, you may add filters of MAC addresses to isolate users' access from wired LAN.

Manage Wireless Stations - Station List

It will display all the stations in your wireless network and the status of their connection.

DFS Restrictions

Some of 5GHz channels are DFS channels which are governed radars. Without passing DFS certificate test, we can not open those DFS channels in Vigor router. We are working on DFS certification in Europe and open those channels by releasing new firmware once we receive DFS certification. According to DFS certificate in Europe, we will open channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, and 136.

At present, we will not open DFS channels in the USA because we do not have plan for DFS certification in the USA. Channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, and 136 will be restricted in the USA.

In some countries, there are restrictions on DFS channels as well. We will implement country code to restrict uncertified channels.

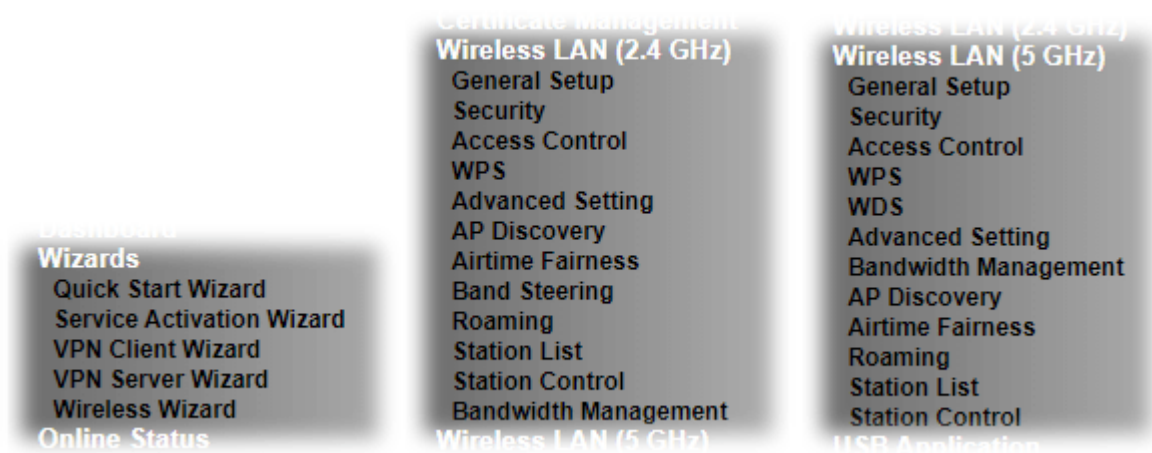

Below shows the menu items for Wireless LAN (2.4Ghz) and Wireless LAN(5GHz).

WPS

WPS (Wi-Fi Protected Setup) provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

Web User Interface

III-1-1 Wireless Wizard

The wireless wizard allows you to configure settings specified for a host AP (for home use or internal use for a company) and specified for a guest AP (for any wireless clients accessing into Internet).

Follow the steps listed below:

1. Open **Wizards**>>**Wireless Wizard**.
2. The screen of wireless wizard will be shown as follows. This page will be used for internal users in a company or your home. Besides, the settings will change based on different model of Vigor2915 series. In this case, Vigor2915ac is used as an example.

Wireless Wizard

Host AP Configuration

Wireless 2.4GHz Settings	
Name:	<input type="text" value="DrayTek"/>
Mode:	<input type="button" value="Mixed(11b+11g+11n)"/>
Channel:	<input type="button" value="Channel 6, 2437MHz"/>
Security Key:	<input type="password" value="••••••••••"/>
Wireless 5GHz Settings	
<input type="checkbox"/> Use the same SSID and Security Key as above	
Name:	<input type="text" value="DrayTek_5G"/>
Mode:	<input type="button" value="Mixed (11a+11n+11ac)"/>
Channel:	<input type="button" value="Channel 36, 5180MHz"/>
Security Key:	<input type="password" value="••••••••••"/>
Note: The host AP configured here will be used for home or internal company use.	

Available settings are explained as follows:

Item	Description
Wireless 2.4GHz Settings	
Name	Enter the SSID name of this router for wireless 2.4GHz. The default name is defined with DrayTek. Change the name if required.
Mode	At present, the router can connect to 11n Only, 11g Only, Mixed (11b+11g), Mixed (11a+11n), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mix (11b+11g+11n) mode.
Channel	Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.
Security Key	The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either 8~63 ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").
Wireless 5GHz Settings - Such part is available when your Vigor router supports wireless 5GHz.	
Use the same SSID and Security Key as above	Check the box to use the same settings configured above.
Name	Enter the SSID name of this router for wireless 5GHz.
Mode	At present, the router can connect to 11a Only, 11n Only (5GHz), Mixed (11a+11n) and Mixed (11a+11n+11ac) stations simultaneously.
Channel	Means the channel of frequency of the wireless LAN. The default channel is 36. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.
Security Key	The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either 8~63 ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").
Next	Click it to get into the next setting page.
Cancel	Exit the wireless wizard without saving any changes.

- After typing the required information, click **Next**. The settings in the page limit the wireless station (guest) accessing into Internet but not being allowed to share the LAN network and VPN connection.

Guest AP Configuration

Wireless 2.4GHz Settings	
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
SSID:	DrayTek_Guest
Security Key:	*****
Bandwidth Limit:	<input type="checkbox"/> Enable Total Upload 30000 kbps Total Download 30000 kbps
Wireless 5GHz Settings	
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
<input type="checkbox"/> Use the same SSID and Security Key as above	
SSID:	DrayTek_5G_Guest
Security Key:	*****
Note: The configured guest AP will not be able to access the LAN network, VPN connections, or communicate with wireless devices connecting to the router's other APs. This AP interface shall be used for Internet access only.

Note:

1. Channel setting should not be changed while Wireless 2.4G WAN mode is in use.
2. Isolate Member: Prevent the clients associated with this SSID from accessing each other.
3. Isolate VPN: Block the wireless clients from accessing the VPN network and prevent wireless traffic being sent to VPN connections.
4. Only the action "Force Down" in the Schedule Profile will be applied to WLAN, other actions will be ignored.

Available settings are explained as follows:

Item	Description
Enable Wireless LAN	Check the box to enable wireless function.
Mode	<p>2.4GHz in "n" and "ac" model:</p> <p>At present, the router can connect to 11g Only, 11n Only(2.4 GHz), Mixed (11b+11g), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mixed (11b+11g+11n) mode.</p> <p>5 GHz in "n" model:</p> <p>At present, the router can connect to 11a Only, 11n Only (5 GHz), Mixed (11a+11n) stations simultaneously. Simply choose Mixed (11a+11n) mode.</p> <p>5 GHz in "ac" model:</p> <p>At present, the router can connect to 11a Only, 11n Only (5 GHz), Mixed (11a+11n) and Mixed (11a+11n+11ac) stations</p>

	<p>simultaneously. Simply choose Mixed (11a+11n+11ac) mode.</p> <p>Note: 802.11b/g operates on 2.4G band, 802.11a operates on 5G band, 802.11n operates on either 2.4G or 5G band, and 802.11ac operates on 5G band only.</p>
Channel	<p>Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.</p> <p>2.4GHz:</p>  <p>5 GHz:</p>  <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: For the restricted channels on DFS, please refer to 4.18.1 Basic Concepts for more detailed information.</p> </div>
Hide SSID	<p>Check it to prevent from wireless sniffing and make it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless utility, the user may only see the information except SSID or just cannot see any thing about Vigor wireless router while site surveying. The system allows you to set four sets of SSID for different usage. In default, the first set of SSID will be enabled. You can hide it for your necessity.</p>
SSID	<p>Means the identification of the wireless LAN. SSID can be any text numbers or various special characters.</p>
Isolate	<p>Member -Check this box to make the wireless clients (stations) with the same SSID not accessing for each other.</p> <p>VPN - Check this box to make the wireless clients (stations) with different VPN not accessing for each other.</p>

Schedule Profiles	Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.
Enable Special SSID Schedule Profiles	Selected SSID (2 /3 /4) will be forced up /down based on the schedule profile used. Check SSIDx(All) to select all of the SSID items.

After finishing all the settings here, please click OK to save the configuration.

III-1-3 Security

This page allows you to set security with different modes for SSID 1, 2, 3 and 4 respectively. After configuring the correct settings, please click OK to save and invoke it.

The password (PSK) of default security mode is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

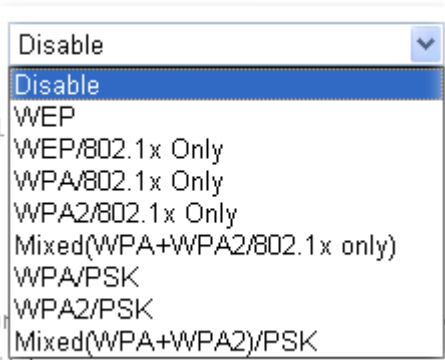

By clicking the **Wireless LAN>>Security Settings**, a new web page will appear so that you could configure the settings of WPA and WEP.

Wireless LAN(2.4GHz) >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4

For 64 bit WEP key configurations, please insert 5 ASCII characters, for example: "AB312".			
For 128 bit WEP key configurations, please insert 13 ASCII characters.			

Available settings are explained as follows:

Item	Description
Mode	<p>There are several modes provided for you to choose.</p>  <p>Info You should also set Wireless LAN(2.4GHz) 802.1X Setting simultaneously if 802.1x mode is selected.</p> <p>Disable - Turn off the encryption mechanism.</p> <p>WEP-Accepts only WEP clients and the encryption key should be entered in WEP Key.</p> <p>WEP/802.1x Only - Accepts only WEP clients and the</p>

	<p>encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/802.1x Only- Accepts only WPA clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA2/802.1x Only- Accepts only WPA2 clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>Mixed (WPA+WPA2/802.1x only) - Accepts WPA and WPA2 clients simultaneously and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/PSK-Accepts only WPA clients and the encryption key should be entered in PSK.</p> <p>WPA2/PSK-Accepts only WPA2 clients and the encryption key should be entered in PSK.</p> <p>Mixed (WPA+ WPA2)/PSK - Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.</p>
WPA	<p>The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either 8–63 ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p>Pre-Shared Key (PSK) - Either 8~63 ASCII characters, such as 012345678..(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p>Password Strength - The system will display the password strength (represented with the word of weak, medium or strong) of the PSK specified above.</p> <p>EAPOL Key Retry - The default setting is "Enable". It can make sure that the key will be installed and used once in order to prevent key reinstallation attack.</p>
WEP	<p>64-Bit - For 64 bits WEP key, either 5 ASCII characters, such as 12345 (or 10 hexadecimal digitals leading by 0x, such as 0x4142434445.)</p> <p>128-Bit - For 128 bits WEP key, either 13 ASCII characters, such as ABCDEFGHIJKLM (or 26 hexadecimal digits leading by 0x, such as 0x4142434445464748494A4B4C4D).</p> <p>All wireless devices must support the same WEP encryption bit size and have the same key. Four keys can be entered here, but only one key can be selected at a time. The keys can be entered in ASCII or Hexadecimal. Check the key you wish to use.</p>

After finishing all the settings here, please click OK to save the configuration.

III-1-4 Access Control

In the **Access Control**, the router may restrict wireless access to certain wireless clients only by locking their MAC address into a black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only let them be able to connect by inserting their MAC addresses into a white list.

In the **Access Control** web page, users may configure the **white/black** list modes used by each SSID and the MAC addresses applied to their lists.

Attribute : s: Isolate the station from LAN

Comment :

Backup Access Control: Upload From File: 未選擇任何檔案

Note:
Support AP ACL configuration file restoration.

Available settings are explained as follows:

Item	Description
Enable Mac Address Filter	Select the SSIDs that you would like to have MAC Address filter enabled. Select White List or Black List in the combo box next to each enabled SSIDs. White List - Only allow wireless clients whose MAC addresses are listed in the MAC Address Filter list. Black List - Only allow wireless clients whose MAC addresses are not listed in the MAC Address Filter list.
MAC Address Filter	Display all MAC addresses that are edited before.
Client's MAC Address	Manually enter the MAC address of wireless client.

Apply SSID	After entering the client's MAC address, check the box of the SSIDs desired to insert this MAC address into their access control list.
Attribute	s: Isolate the station from LAN - select to isolate the wireless connection of the wireless client of the MAC address from LAN.
Comment	Type a brief description for the specified client's MAC address.
Add	Add a new MAC address into the list.
Delete	Delete the selected MAC address in the list.
Edit	Edit the selected MAC address in the list.
Cancel	Give up the access control set up.
OK	Click it to save the access control list.
Clear All	Clean all entries in the MAC address list.
Backup Access Control	Settings on this web page can be saved as a file which can be restored in the future by this device or other device.
Upload From File	Restore wireless access control settings and applied onto this device.

After finishing all the settings here, please click **OK** to save the configuration.

III-1-5 WPS

WPS (Wi-Fi Protected Setup) provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

Info

WPS is available for the wireless station with WPS supported.

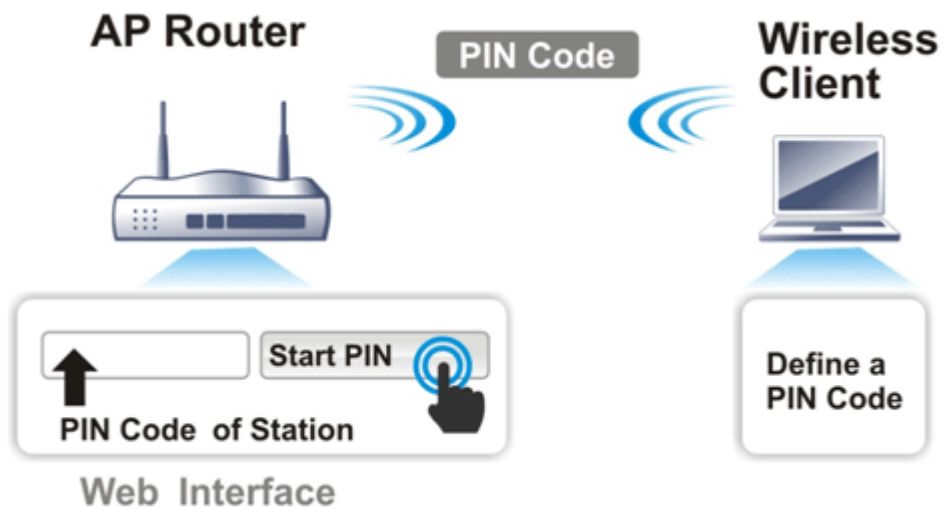

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the **Start PBC** button or using **PIN Code**.

- On the side of Vigor2915 series which served as an AP, press WPS button once on the front panel of the router or click Start PBC on web configuration interface. On the side of a station with network card installed, press Start PBC button of network card.

- If you want to use PIN code, you have to know the PIN code specified in wireless client. Then provide the PIN code of the wireless client you wish to connect to the vigor router.

- For WPS is supported in WPA-PSK or WPA2-PSK mode, if you do not choose such mode in Wireless LAN>>Security, you will see the following message box.

Please click OK and go back Wireless LAN>>Security to choose WPA-PSK or WPA2-PSK mode and access WPS again.

Below shows Wireless LAN>>WPS web page:

Wireless LAN(2.4GHz) >> WPS (Wi-Fi Protected Setup)

Enable WPS 

Wi-Fi Protected Setup Information

WPS Status	Configured
SSID	DrayTek
Authentication Mode	Mixed(WPA+WPA2)/PSK

Device Configure

Configure via Push Button	<input type="button" value="Start PBC"/>
Configure via Client PinCode	<input type="text"/> <input type="button" value="Start PIN"/>

Status: Ready

Note:

WPS can help your wireless client automatically connect to the Access point.

: WPS is Disabled.

: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
Enable WPS	Check this box to enable WPS setting.
WPS Status	Display related system information for WPS. If the wireless security (encryption) function of the router is properly configured, you can see 'Configured' message here.
SSID	Display the SSID1 of the router. WPS is supported by SSID1 only.
Authentication Mode	Display current authentication mode of the router. Only WPA2/PSK and WPA/PSK support WPS.
Configure via Push Button	Click Start PBC to invoke Push-Button style WPS setup procedure. The router will wait for WPS requests from wireless clients about two minutes. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)
Configure via Client PinCode	Please input the PIN code specified in wireless client you wish to connect, and click Start PIN button. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)

III-1-6 WDS (for 5GHz only)

WDS means Wireless Distribution System. It is a protocol for connecting two access points (AP) wirelessly. Usually, it can be used for the following application:

- Provide bridge traffic between two LANs through the air.
- Extend the coverage range of a WLAN.

Refer to the following table:

WDS Mode	Wireless Signal	Comparisons
Bridge	Limited	<ul style="list-style-type: none"> • Wireless stations (clients) within the effective range of wireless signal can access into Internet through the router /AP. • Wireless stations (clients) out of the effective range of wireless signal cannot access into Internet through the router /AP with Bridge mode configured. • The packets received from a WDS link will only be forwarded to local wired or wireless hosts.
Repeater	Extended	<ul style="list-style-type: none"> • Wireless stations (clients) within the effective range of wireless signal can access into Internet through the router /AP. • Wireless stations (clients) out of the effective range of wireless signal can access into Internet through the router /AP with Repeater mode configured. • The packets received from one Vigor router can be repeated to another AP (remotely) through WDS links. • Only Repeater mode can do WDS-to-WDS packet forwarding.

To meet the above requirement, two WDS modes are implemented in Vigor router. One is **Bridge**, the other is **Repeater**. Below shows the function of WDS-bridge interface:

The application for the WDS-Repeater mode is depicted as below:

The major difference between these two modes is that: while in **Repeater** mode, the packets received from one peer AP can be repeated to another peer AP through WDS links. Yet in **Bridge** mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following examples, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 **CANNOT** communicate with hosts connected to Bridge 3 through Bridge 2.

Click WDS from Wireless LAN menu. The following page will be shown.

WDS Settings
| [Set to Factory Default](#) |

<p>Mode: Disable ▼</p> <hr/> <p>Security:</p> <p><input checked="" type="radio"/> Disable <input type="radio"/> WEP <input type="radio"/> Pre-shared Key</p> <hr/> <p>WEP:</p> <p>Use the same WEP key set in Security Settings.</p> <hr/> <p>Pre-shared Key:</p> <p>Type:</p> <p><input type="radio"/> WPA <input checked="" type="radio"/> WPA2</p> <p>Key: Max: 66 characters</p> <p>Note: WPA and WPA2 are not compatible with DrayTek WPA.</p> <p>Type 8~63 ASCII characters, for example: "cfigs01a2..."</p>	<p>Repeater</p> <p>Enable Peer MAC Address</p> <p><input type="checkbox"/> : : : : : </p> <p><input type="checkbox"/> : : : : : </p> <p><input type="checkbox"/> : : : : : </p> <p><input type="checkbox"/> : : : : : </p> <hr/> <p>Access Point Function:</p> <p><input checked="" type="radio"/> Enable <input type="radio"/> Disable</p> <hr/> <p>Status:</p> <p><input type="checkbox"/> Send "Hello" message to peers.</p> <p style="text-align: center;">Link Status</p> <p>Note: The status is valid only when the peer also supports this function.</p>
---	--

OK Cancel

Available settings are explained as follows:

Item	Description
Mode	Choose the mode for WDS setting. Disable mode will not invoke any WDS setting. Repeater mode is for the second one.
Security	There are three types for security, Disable and Pre-shared key . The setting you choose here will make the following Pre-shared key field be valid or not. Choose one of the types for the router.
Pre-shared Key	When Pre-Shared Key is selected as Security above, configure the following settings if required. Type - There are some types for you to choose. WPA and WPA2 are used for WDS devices (e.g.2925n wireless router, you can set the encryption mode as WPA or WPA2 to establish your WDS system between AP and the router. Key - Set the encryption key in this field. Type 8 ~ 63 ASCII characters or 64 hexadecimal digits leading by "0x".
Repeater	If you choose Repeater as the connecting mode, please type in the peer MAC address (of VigorAP/Vigor router required to make connection with such Vigor router and used to extend the wireless signal) in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Similarly, if you want to invoke the peer MAC address, remember to check Enable box in the front of the MAC address after typing.
Access Point Function	Click Enable to make this router serve as an access point. When Repeater is set as WDS Mode, click Enable to use such function. Click Disable if Bridge is set as WDS Mode.

Status	It allows user to send "hello" message to peers. Yet, it is valid only when the peer also supports this function.
---------------	---

After finishing all the settings here, please click **OK** to save the configuration.

III-1-7 Advanced Setting

This page allows users to set advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

Wireless LAN (2.4 GHz) >> Advanced Setting

Country Code	<input type="text"/> (Reference)
Isolate 2.4GHz and 5GHz bands	<input checked="" type="radio"/> Enable <input type="radio"/> Disable

OK

Available settings are explained as follows:

Item	Description
Operation Mode	<p>Mixed Mode - the router can transmit data with the ways supported in both 802.11a/b/g and 802.11n standards. However, the entire wireless transmission will be slowed down if 802.11g or 802.11b wireless client is connected.</p> <p>Green Field - to get the highest throughput, please choose such mode. Such mode can make the data transmission happen between 11n systems only. In addition, it does not</p>

	have protection mechanism to avoid the conflict with neighboring devices of 802.11a/b/g.
Channel Bandwidth	<p>20- the router will use 20Mhz for data transmission and receiving between the AP and the stations.</p> <p>40- the router will use 40Mhz for data transmission and receiving between the AP and the stations.</p> <p>20/40 - Vigor Router will scan for nearby wireless AP, and then use 20MHz if the number of AP is more than 10, or use 40MHz if it's not.</p>
Guard Interval	It is to assure the safety of propagation delays and reflections for the sensitive digital data. If you choose auto as guard interval, the AP router will choose short guard interval (increasing the wireless performance) or long guard interval for data transmit based on the station capability.
Aggregation MSDU	Aggregation MSDU can combine frames with different sizes. It is used for improving MAC layer's performance for some brand's clients. The default setting is Enable.
Long Preamble	This option is to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. Click Enable to use Long Preamble if needed to communicate with this kind of devices.
Packet-OVERDRIVE (for 2.4GHz only)	<p>This feature can enhance the performance in data transmission about 40%* (by checking Tx Burst). It is active only when both the Access Point and Station (in wireless client) support and invoke this function at the same time.</p> <p>Note: Vigor N61 wireless adapter supports this function. Therefore, you can install it on your PC to take advantage of Packet-OVERDRIVE (Refer to the following picture of Vigor N61 wireless utility window: choose Enable for TxBURST on the Option tab).</p>
	 <p>The screenshot shows the 'Option' tab of the 'Vigor N61 802.11n Wireless USB Adapter Utility' window. Under the 'Advance Setting' section, the 'Tx Burst' dropdown menu is open, displaying 'Disable' and 'Enable' options. Other settings visible include 'Fragmentation Threshold' (2346), 'RTS Threshold' (2347), 'Frequency' (802.11b/g/n - 2.4GH), 'Ad-hoc Channel' (1), 'Power Save Mode' (Disable), and 'Disable Radio' (unchecked).</p>
	<p>Info * Real transmission rate depends on the environment of the network.</p>

Antenna (for 2.4GHz only)	Vigor router can be attached with two antennas to have good data transmission via wireless connection. However, if you have only one antenna attached, please choose 1T1R.
TX Power	Set the power percentage for transmission signal of access point. The greater the value is, the higher intensity of the signal will be.
WMM Capable	WMM is an abbreviation of Wi-Fi Multimedia. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs). The categories are designed with specific types of traffic, voice, video, best effort and low priority data. There are four accessing categories - AC_BE , AC_BK, AC_VI and AC_VO for WMM. To apply WMM parameters for wireless data transmission, please click the Enable radio button.
APSD Capable	APSD (automatic power-save delivery) is an enhancement over the power-save mechanisms supported by Wi-Fi networks. It allows devices to take more time in sleeping state and consume less power to improve the performance by minimizing transmission latency. The default setting is Disable .
Rate Adaptation Algorithm	Wireless transmission rate is adapted dynamically. Usually, performance of "new" algorithm is better than "old". Sets the way the Wireless transmission rate is adjusted dynamically. In most cases, selecting "New" will result in better performance than "Old".
Fragment Length (256 - 2346)	Set the Fragment threshold. Do not modify default value if you don't know what it is, default value is 2346.
RTS Threshold (1 - 2347)	Minimize the collision (unit is bytes) between hidden stations to improve wireless performance. Set the RTS threshold. Do not modify default value if you don't know what it is, default value is 2347.
Country Code	Vigor router broadcasts country codes by following the 802.11d standard. However, some wireless stations will detect / scan the country code to prevent conflict occurred. If conflict is detected, wireless station will be warned and is unable to make network connection. Therefore, changing the country code to ensure successful network connection will be necessary for some clients.
Isolate 2.4GHz and 5GHz bands	The default setting is "Enable". It means that the wireless client using 2.4GHz band is unable to connect to the wireless client with 5GHz band, and vice versa. For WLAN 2.4GHz and 5GHz set with the same SSID name: <ul style="list-style-type: none"> ● No matter such function is enabled or disabled, clients using WLAN 2.4GHz and 5GHz can communicate for each other if Isolate Member (in Wireless LAN>>General Setup) is NOT enabled for such SSID. ● Yet, if the function of Isolate Member (in Wireless LAN>>General Setup) is enabled for such SSID, clients using WLAN 2.4GHz and 5GHz will be unable to communicate with each other.

After finishing all the settings here, please click **OK** to save the configuration.

III-1-8 AP Discovery

Vigor router can scan all regulatory channels and find working APs in the neighborhood. Based on the scanning result, users will know which channel is clean for usage. Also, it can be used to facilitate finding an AP for a WDS link. Notice that during the scanning process (about 5 seconds), no client is allowed to connect to Vigor.

This page is used to scan the existence of the APs on the wireless LAN. Yet, only the AP which is in the same channel of this router can be found. Please click **Scan** to discover all the connected APs.

Wireless LAN (5 GHz) >> Access Point Discovery

Access Point List

Index	BSSID	Channel	RSSI	SSID	Authentication
<div style="text-align: right; margin-bottom: 5px;"><input type="button" value="Scan"/></div>					

See [Statistics](#).

Add to [WDS Settings](#) :

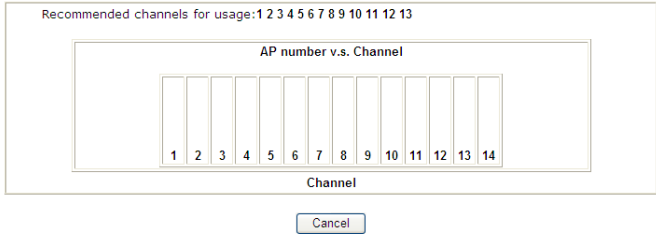

AP's MAC address : : : : :

Repeater

Note:

1. During the scanning process (~15 seconds), no station is allowed to connect with the router.
2. AP Discovery can only support up to 32 APs displayed on the screen.

Available settings are explained as follows:

Item	Description
Scan	It is used to discover all the connected AP. The results will be shown on the box above this button.
Statistics	<p>It displays the statistics for the channels used by APs.</p> <p>Wireless LAN >> Site Survey Statistics</p> 
Add to	If you want the found AP applying the WDS settings, please type in the AP's MAC address on the bottom of the page and click Bridge or Repeater. Next, click Add to . Later, the MAC address of the AP will be added to Bridge or Repeater field of WDS settings page.

III-1-9 Airtime Fairness

Airtime fairness is essential in wireless networks that must support critical enterprise applications.

Most of the applications are either symmetric or require more downlink than uplink capacity; telephony and email send the same amount of data in each direction, while video streaming and web surfing involve more traffic sent from access points to clients than the other way around. This is essential for ensuring predictable performance and quality-of-service, as well as allowing 802.11n and legacy clients to coexist on the same network. Without airtime fairness, offices using mixed mode networks risk having legacy clients slow down the entire network or letting the fastest client(s) crowd out other users.

With airtime fairness, every client at a given quality-of-service level has equal access to the network's airtime.

The wireless channel can be accessed by only one wireless station at the same time.

The principle behind the IEEE802.11 channel access mechanisms is that each station has *equal probability* to access the channel. When wireless stations have similar data rate, this principle leads to a fair result. In this case, stations get similar channel access time which is called airtime.

However, when stations have various data rate (e.g., 11g, 11n), the result is not fair. The slow stations (11g) work in their slow data rate and occupy too much airtime, whereas the fast stations (11n) become much slower.

Take the following figure as an example, both Station A(11g) and Station B(11n) transmit data packets through Vigor router. Although they have equal probability to access the wireless channel, Station B(11n) gets only a little airtime and waits too much because Station A(11g) spends longer time to send one packet. In other words, Station B(fast rate) is obstructed by Station A(slow rate).

To improve this problem, Airtime Fairness is added for Vigor router. Airtime Fairness function tries to assign *similar airtime* to each station (A/B) by controlling TX traffic. In the following figure, Station B(11n) has higher probability to send data packets than Station A(11g). By this way, Station B(fast rate) gets fair airtime and it's speed is not limited by Station A(slow rate).

It is similar to automatic Bandwidth Limit. The dynamic bandwidth limit of each station depends on instant active station number and airtime assignment. Please note that Airtime

Fairness of 2.4GHz and 5GHz are independent. But stations of different SSIDs function together, because they all use the same wireless channel. IN SPECIFIC ENVIRONMENTS, this function can reduce the bad influence of slow wireless devices and improve the overall wireless performance.

Suitable environment:

- (1) Many wireless stations.
- (2) All stations mainly use download traffic.
- (3) The performance bottleneck is wireless connection.

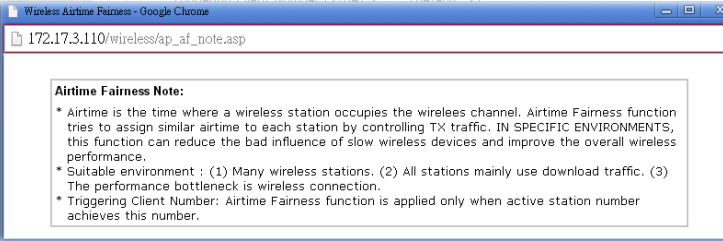

Wireless LAN(2.4GHz) >> Airtime Fairness

Enable **Airtime Fairness**
 Triggering Client Number (2 ~ 64) (Default: 2)

Note:

Please enable or disable this function according to the real situation and user experience. It is NOT suitable for all environments.

Available settings are explained as follows:

Item	Description
<p>Enable Airtime Fairness</p>	<p>Try to assign similar airtime to each wireless station by controlling TX traffic.</p> <p>Airtime Fairness - Click the link to display the following screen of airtime fairness note.</p>  <p>Triggering Client Number -Airtime Fairness function is applied only when active station number achieves this number.</p>

After finishing this web page configuration, please click OK to save the settings.

Info

Airtime Fairness function and Bandwidth Limit function should be mutually exclusive. So their webs have extra actions to ensure these two functions are not enabled simultaneously.

III-1-10 Band Steering (for 2.4GHz only)

Band Steering detects if the wireless clients are capable of 5GHz operation, and steers them to that frequency. It helps to leave 2.4GHz band available for legacy clients, and improves users experience by reducing channel utilization.

If dual-band is detected, the AP will let the wireless client connect to less congested wireless LAN, such as 5GHz to prevent from network congestion.

Info

To make Band Steering work successfully, SSID and security on 2.4GHz also MUST be broadcasted on 5GHz.

Open **Wireless LAN (2.4GHz)>>Band Steering** to get the following web page:

Wireless LAN(2.4GHz) >> Band Steering

Enable **Band Steering**
 Check Time for WLAN Client 5G Capability second(s) (1 ~ 60) (Default: 15)

Note:

Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

Available settings are explained as follows:

Item	Description
Enable Band Steering	If it is enabled, Vigor router will detect if the wireless client is capable of dual-band or not within the time limit. Check Time.... - If the wireless station does not have the capability of 5GHz network connection, the system shall wait and check for several seconds (15 seconds, in default) to make the 2.4GHz network connection. Specify the time limit for Vigor router to detect the wireless client.

After finishing this web page configuration, please click OK to save the settings.

Below shows how Band Steering works.

How to Use Band Steering?

1. Open **Wireless LAN(2.4GHz)>>Band Steering**.
2. Check the box of **Enable Band Steering** and use the default value (15) for check time setting.

Wireless LAN(2.4GHz) >> Band Steering

Enable Band Steering
 Check Time for WLAN Client 5G Capability second(s) (1 ~ 60) (Default: 15)

Note:

Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

3. Click **OK** to save the settings.
4. Open **Wireless LAN (2.4GHz)>>General Setup** and **Wireless LAN (5GHz)>> General Setup**. Configure SSID as *DrayTek2915_BandSteering* for both pages. Click **OK** to save the settings.

EAPOL Key Retry:		<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
Note: Type 8~63 ASCII characters, for example: "cfgs01a2..." For strong passwords: 1. Use at least 12 characters.			

Same value for 2.4GHz and 5GHz

- Now, Vigor router will let the wireless clients connect to less congested wireless LAN, such as 5GHz to prevent from network congestion.

III-1-11 Roaming

The network signal for a single wireless access point might be limited by its coverage range. Therefore, if you want to expand the wireless network in a large exhibition with a quick method, you can install multiple access points with enabling the Roaming feature for each AP to reach the purpose of expanding wireless signals seamlessly.

These access points connecting for each other shall be verified by pre-authentication. This page allows you to enable the roaming feature and the pre-authentication.

Wireless LAN(2.4GHz) >> Roaming

Router-assisted Client Roaming Parameters

Disable RSSI Requirement

Strictly Minimum RSSI -73 dBm (42 %) (Default: -73)

Minimum RSSI -66 dBm (60 %) (Default: -66)

with Adjacent AP RSSI over 5 dB (Default: 5)

Available settings are explained as follows:

Item	Description
Disable RSSI Requirement	When the link rate of wireless station is too low or the signal received by the wireless station is too worse, Vigor router will automatically detect (based on the link rate and RSSI requirement) and cut off the network connection for that wireless station to assist it to connect another Wireless AP to get better signal. This option is to disable the roaming mechanism.
Strictly Minimum RSSI	Vigor router uses RSSI (received signal strength indicator) to decide to terminate the network connection of wireless station. When the signal strength is below the value (dBm) set here, Vigor router will terminate the network connection for that wireless station.
Minimum RSSI	Minimum RSSI - When the signal strength of the wireless station is below the value (dBm) set here and adjacent AP (must be DrayTek AP and support such feature too) with higher signal strength value (defined in the field of With Adjacent AP RSSI over) is detected by Vigor router, Vigor router will terminate the network connection for that wireless station. Later, the wireless station can connect to the adjacent AP (with better RSSI). <ul style="list-style-type: none"> ● With Adjacent AP RSSI over - Specify a value as a threshold.

After finishing this web page configuration, please click OK to save the settings.

III-1-12 Station List

Station List provides the knowledge of connecting wireless clients now along with its status code. There is a code summary below for explanation. For convenient **Access Control**, you can select a WLAN station and click **Add to Access Control** below.

Wireless LAN(2.4GHz) >> Station List

Station List

General Advanced Neighbor

Index	Status	IP Address	MAC Address	Associated with

Status Codes :
C: Connected, No encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
B: Blocked by Access Control.
N: Connecting.
F: Fail to pass WPA/PSK authentication.

Add to Access Control :

Client's MAC address : : : : :

Note:

After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

Available settings are explained as follows:

Item	Description
Refresh	Click this button to refresh the status of station list.
Add	Click this button to add current typed MAC address into Access Control.

III-1-13 Station Control

Station Control is used to specify the duration for the wireless client to connect and reconnect Vigor router. If such function is not enabled, the wireless client can connect Vigor router until the router shuts down.

Such feature is especially useful for free Wi-Fi service. For example, a coffee shop offers free Wi-Fi service for its guests for one hour every day. Then, the connection time can be set as "1 hour" and reconnection time can be set as "1 day". Thus, the guest can finish his job within one hour and will not occupy the wireless network for a long time.

Wireless LAN(2.4GHz) >> Station Control

SSID 1	SSID 2	SSID 3	SSID 4
SSID		DrayTek	
Enable		<input type="checkbox"/>	
Connection Time		1 hour ▼	
Reconnection Time		1 day ▼	
Display All Station Control List			
Hotspot Web Portal			

Note:

Once the feature is enabled, the connection time quota will apply to each wireless client (identified by MAC address).

OK Cancel

Available settings are explained as follows:

Item	Description
SSID	Display the SSID that the wireless station will use it to connect with Vigor router.
Enable	Check the box to enable the station control function.
Connection Time / Reconnection Time	Use the drop down list to choose the duration for the wireless client connecting /reconnecting to Vigor router. Or, Enter the duration manually when you choose User defined .
Display All Station Control List	All the wireless stations connecting to Vigor router by using such SSID will be listed on Station Control List.
Hotspot Web Portal	Click it to access in to Hotspot Web Portal page for modifying the settings if required.

After finishing all the settings here, please click **OK** to save the configuration.

III-1-14 Bandwidth Management

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Bandwidth Management to make the bandwidth usage more efficient.

Wireless LAN >> Bandwidth Management

SSID 1	SSID 2	SSID 3	SSID 4
SSID:		DrayTek	
Enable		<input checked="" type="checkbox"/>	
Bandwidth Limit Type		Auto Adjustment ▼	
Total Upload Limit(Kbps)		30000	
Total Download Limit(Kbps)		30000	

Note: 1.Download: Traffic going to any station.Upload: Traffic being sent from a wireless station.
2.Allow auto adjustment could make the best utilization of available bandwidth.

OK Cancel

Available settings are explained as follows:

Item	Description
SSID	Display the specific SSID name.
Enable	Check this box to enable the bandwidth management for clients.
Bandwidth Limit Type	Auto Adjustment - Bandwidth limit is determined by the system automatically. Per Station Limit - Bandwidth limit is determined according to the limitation of the wireless client.
Total Upload Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data traffic (uploading) for all of the wireless clients connecting to Vigor2915.
Total Download Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data clientstations connecting to Vigor2915.
Upload Limit	It is available when Per Station Limit is selected. Type a value to define the maximum data traffic (uploading) for each wireless client connecting to Vigor2915.
Download Limit	It is available when Per Station Limit is selected Type a value to define the maximum data traffic (downloading) for each wireless client connecting to Vigor2915.

After finishing this web page configuration, please click **OK** to save the settings.

Part IV VPN

VPN

SSL VPN

Certificate
Management

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

It is a form of VPN that can be used with a standard Web browser.

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

IV-1 VPN and Remote Access

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

The VPN built is suitable for:

- Communication between home office and customer
- Secure connection between Teleworker, staff on business trip and main office
- Exchange data between remote office and main office
- POS between chain store and headquarters

Site-to-Site (LAN-to-LAN)

- A connection between two router's LAN networks.
- Allows employees in branch offices and head office to share the same network resources.

Remote Access (Remote Dial-in)

- A connection between the remote host and router's LAN network. The host will use an IP address in the local subnet.
- Allows employees to access the company's internal resources when they are traveling.

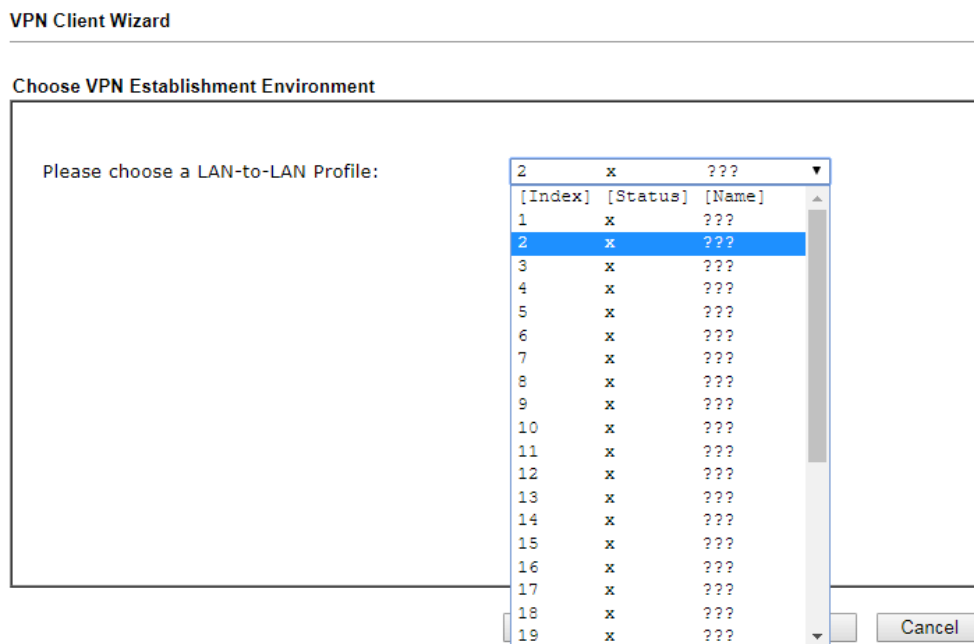

Web User Interface

IV-1-1 VPN Client Wizard

Such wizard is used to configure VPN settings for VPN client. Such wizard will guide to set the LAN-to-LAN profile for VPN dial out connection (from server to client) step by step.

1. Open Wizards>>VPN Client Wizard. The following page will appear.

Available settings are explained as follows:

Item	Description
Please choose a LAN-to-LAN Profile	There are 32 VPN profiles for users to set.

[Index]	[Status]	[Name]
1	x	???
2	x	???
3	x	???
4	x	???
5	x	???
6	x	???
7	x	???

- When you finish the mode and profile selection, please click **Next** to open the following page.

VPN Client Wizard

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for such profile. The length of the file is limited to 10 characters.

VPN Dial-Out Through	<p>Use the drop down menu to choose a proper WAN interface for this profile. This setting is useful for dial-out only.</p> <p>WAN1 First/ WAN2 First - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for VPN connection. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.</p> <p>WAN1 Only /WAN2 Only - While connecting, the router will use WAN1/WAN2/WAN3 as the only channel for VPN connection.</p> <p>WAN1 Only: Only establish VPN if WAN2 down - If WAN2 failed, the router will use WAN1 for VPN connection.</p> <p>WAN2 Only: Only establish VPN if WAN1 down - If WAN1 failed, the router will use WAN2 for VPN connection.</p>
Always On	Check to enable router always keep VPN connection.
Server IP/Host Name for VPN	Enter the IP address of the server or Enter the host name for such VPN profile.
IKE Authentication Method	<p>IKE Authentication Method usually applies to those are remote dial-in user or node (LAN to LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel.</p> <p>Pre-Shared Key- Specify a key for IKE authentication.</p> <p>Confirm Pre-Shared Key-Confirm the pre-shared key.</p>
Digital Signature (X.509)	<p>Click Digital Signature to invoke this function.</p> <p>Peer ID - Choose the peer ID selection from the drop down list.</p> <p>Local ID - Choose Alternative Subject Name First or Subject Name First.</p> <p>Local Certificate - Use the drop down list to choose one of the certificates for using. You have to configure one certificate at least previously in Certificate Management >> Local Certificate. Otherwise, the setting you choose here will not be effective.</p>
IPsec Security Method	<p>Medium - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>High - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>
Username	<p>This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above.</p> <p>The length of the user name is limited to 11 characters.</p>
Password	<p>This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above.</p> <p>The length of the password is limited to 11 characters.</p>
Remote Network IP	Please type one LAN IP address (according to the real location of the remote host) for building VPN connection.
Remote Network Mask	Please Enter the network mask (according to the real location of the remote host) for building VPN connection.
Local Network IP	Enter the local network IP for TCP / IP configuration.
Local Network Mask	Enter the local network mask for TCP / IP configuration.

- After finishing the configuration, please click **Next**. The confirmation page will be shown as follows. If there is no problem, you can click one of the radio buttons listed on the page and click **Finish** to execute the next action.

VPN Client Wizard

View more detailed configuration	Click this radio button to access VPN and Remote Access>>LAN to LAN for viewing detailed configuration.

IV-1-3 Remote Access Control

Enable the necessary VPN service as you need. If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port.

Open **VPN and Remote Access >> Remote Access Control**.

VPN and Remote Access >> Remote Access Control Setup

Remote Access Control Setup

<input checked="" type="checkbox"/>	Enable PPTP VPN Service
<input checked="" type="checkbox"/>	Enable IPSec VPN Service
<input checked="" type="checkbox"/>	Enable L2TP VPN Service
<input checked="" type="checkbox"/>	Enable SSL VPN Service
<input checked="" type="checkbox"/>	Enable OpenVPN Service

Note:

To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT [Open Ports](#) or [Port Redirection](#) is also configured.

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-4 PPP General Setup

This submenu only applies to PPP-related VPN connections, such as PPTP, L2TP, L2TP over IPsec.

VPN and Remote Access >> PPP General Setup

PPP General Setup

<p>PPP/MP Protocol</p> <p>Dial-In PPP Authentication: <input type="text" value="PAP/CHAP/MS-CHAP/MS-CHAPv2"/></p> <p>Dial-In PPP Encryption(MPPE): <input type="text" value="Optional MPPE"/></p> <p>Mutual Authentication (PAP): <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Username: <input type="text" value="Max: 23 characters"/></p> <p>Password: <input type="text" value="Max: 19 characters"/></p> <p>IP Address Assignment for Dial-In Users when DHCP is disabled.</p> <table border="1"> <thead> <tr> <th></th> <th>Start IP Address</th> <th>IP Pool Counts</th> </tr> </thead> <tbody> <tr> <td>LAN 1</td> <td><input type="text" value="192.168.1.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 2</td> <td><input type="text" value="192.168.2.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 3</td> <td><input type="text" value="192.168.3.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 4</td> <td><input type="text" value="192.168.4.200"/></td> <td><input type="text" value="50"/></td> </tr> </tbody> </table>		Start IP Address	IP Pool Counts	LAN 1	<input type="text" value="192.168.1.200"/>	<input type="text" value="50"/>	LAN 2	<input type="text" value="192.168.2.200"/>	<input type="text" value="50"/>	LAN 3	<input type="text" value="192.168.3.200"/>	<input type="text" value="50"/>	LAN 4	<input type="text" value="192.168.4.200"/>	<input type="text" value="50"/>	<p>PPP Authentication Methods</p> <p><input checked="" type="checkbox"/> Remote Dial-in User</p> <p><input checked="" type="checkbox"/> RADIUS</p> <p><input checked="" type="checkbox"/> AD/LDAP</p> <p>PPTP LDAP Profile</p> <p>Note:</p> <ol style="list-style-type: none"> Please select 'PAP Only' 'Dial-In PPP Authentication', if you want to use AD/LDAP for PPP Authentication. Default priority is Remote Dial-in User -> RADIUS -> AD/LDAP. Vigor router also supports Frame-IP-Address from RADIUS server to assign IP address to VPN client. <p>While using Radius or LDAP Authentication:</p> <p>Assign IP from subnet: <input type="text" value="LAN1"/></p>
	Start IP Address	IP Pool Counts														
LAN 1	<input type="text" value="192.168.1.200"/>	<input type="text" value="50"/>														
LAN 2	<input type="text" value="192.168.2.200"/>	<input type="text" value="50"/>														
LAN 3	<input type="text" value="192.168.3.200"/>	<input type="text" value="50"/>														
LAN 4	<input type="text" value="192.168.4.200"/>	<input type="text" value="50"/>														

Available settings are explained as follows:

Item	Description
Dial-In PPP Authentication	<p>PAP Only - elect this option to force the router to authenticate dial-in users with the PAP protocol.</p> <p>PAP/CHAP/MS-CHAP/MS-CHAPv2 - Selecting this option means the router will attempt to authenticate dial-in users with the CHAP protocol first. If the dial-in user does not support this protocol, it will fall back to use the PAP protocol for authentication.</p>
Dial-In PPP Encryption (MPPE)	<p>Optional MPPE - This option represents that the MPPE encryption method will be optionally employed in the router for the remote dial-in user. If the remote dial-in user does not support the MPPE encryption algorithm, the router will transmit "no MPPE encrypted packets". Otherwise, the MPPE encryption scheme will be used to encrypt the data.</p> <ul style="list-style-type: none"> Require MPPE (40/128bits) - Selecting this option will force the router to encrypt packets by using the MPPE encryption algorithm. In addition, the remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data. Maximum MPPE - This option indicates that the router will use the MPPE encryption scheme with maximum bits (128-bit) to encrypt the data.
Mutual Authentication (PAP)	<p>The Mutual Authentication function is mainly used to communicate with other routers or clients who need bi-directional authentication in order to provide stronger security, for example, Cisco routers. So you should enable this function when your peer router requires mutual</p>

	<p>authentication. You should further specify the User Name and Password of the mutual authentication peer.</p> <p>The length of the name/password is limited to 23/19 characters.</p>
IP Address Assignment for Dial-In Users when DHCP is disabled	<p>Enter a start IP address for the dial-in PPP connection for LAN1.</p> <p>LAN2 ~ LAN4 will be available if it is enabled. Refer to LAN>>General Setup for enabling the LAN interface.</p>
PPP Authentication Methods	<p>Select the method(s) to be used for authentication in PPP connection.</p>
PPTP LDAP Profile	<p>Configured LDAP profiles will be listed under such item. Simply check the one you want to enable the PPP authentication by LDAP server profiles.</p> <p>However, if there is no profile listed, simply click the link of PPTP LDAP Profile to create/add some new LDAP profiles you want.</p>
While using Radius or LDAP Authentication	<p>If PPP connection will be authenticated via RADIUS server or LDAP profiles, it is necessary to specify the LAN profile for the dial-in user to get IP from.</p>

IV-1-5 SSL General Setup

SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that encrypts traffic using SSL, which is the same technology used on secured websites. Because of SSL's prominence as an encryption protocol on the Internet, most networks have few restrictions on SSL traffic, and as a result SSL VPN is more likely to work when other VPN technologies experience difficulties due to obstacles such as firewalls and Network Address Translation (NAT).

In short,

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

This page determines the general configuration for SSL VPN Server and SSL Tunnel.

VPN and Remote Access >> SSL General Setup

SSL General Setup

Bind to WAN	<input checked="" type="checkbox"/> WAN1	<input checked="" type="checkbox"/> WAN2
Port	<input type="text" value="443"/>	(Default: 443)
Server Certificate	<input type="text" value="self-signed"/> ▼	

Available settings are explained as follows:

Item	Description
Bind to WAN	Select the WAN interfaces to accept inbound SSL VPN connections.
Port	The port to be used for SSL VPN server. This is separate from the management port (HTTPS Port) which is configured in System Maintenance>>Management . The default setting is 443.
Server Certificate	Specify the certificate to be used for SSL connections. Select a certificate from imported or generated certificates on the router, or choose Self-signed to use the router's built-in default certificate. The selected certificate can be used in SSL VPN server and HTTPS Web Proxy.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

IV-1-6 IPsec General Setup

In IPsec General Setup, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPsec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPsec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

Authentication Header (AH) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

Encapsulating Security Payload (ESP) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

Available settings are explained as follows:

Item	Description
IKE Authentication Method	<p>This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, Certificate (X.509) and Pre-Shared Key.</p> <p>Certificate - X.509 certificates can be used for IKE authentication. To set up certificates on the router, go to the Certificate Management section.</p> <p>Preferred Local ID - Specify the preferred local ID information (Alternative Subject Name First or Subject Name First) for IPsec authentication while the client is using the general setting (without a specific Peer IP or ID in the VPN profile).</p> <p>General Pre-Shared Key- Define the PSK key for general authentication.</p> <p>Confirm General Pre-Shared Key- Re-enter the characters to confirm the pre-shared key.</p> <p>XAuth User Pre-Shared Key - Define the PSK key for IPsec XAuth authentication.</p> <p>Confirm XAuth User Pre-Shared Key- Re-enter the characters to confirm the pre-shared key for IPsec XAuth authentication.</p> <p>Note: Any packets from the remote dial-in user which does not match the rule defined in VPN and Remote Access>>Remote Dial-In User will be applied with the method specified here.</p>
IPsec Security Method	<p>Available methods include Basic, Medium and High. Each method offers different encryption, HMAC and DH Group.</p> <p>Basic - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>Medium - When this option is selected, the Authentication Header (AH) protocol can be used to provide authentication to IPsec traffic.</p> <p>High - When this option is selected, the Encapsulating Security Payload (ESP) protocol can be used to provide authentication and encryption to IPsec traffic. Three encryption standards are supported for ESP: DES, 3DES and AES, in ascending order of security.</p>

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-7 IPsec Peer Identity

To use digital certificate for peer authentication in either LAN-to-LAN connection or Remote User Dial-In connection, here you may edit a table of peer certificate for selection. As shown below, the router provides 32 entries of digital certificates for peer dial-in users.

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click it to clear all indexes.
Index	Click the number below Index to access into the setting page of IPsec Peer Identity.
Enable	Check to enable the profile.
Name	Display the profile name of that index.

Click each index to edit one peer digital certificate. There are three security levels of digital signature authentication: Fill each necessary field to authenticate the remote peer. The following explanation will guide you to fill all the necessary fields.

Profile Index : 1

Enable this account

Profile Name

Accept Any Peer ID

Accept Subject Alternative Name

Type

Domain Name

Accept Subject Name

Country (C)

State (ST)

Location (L)

Organization (O)

Organization Unit (OU)

Common Name (CN)

Email (E)

Available settings are explained as follows:

Item	Description
Enable this account	Check it to enable such account profile.
Profile Name	Enter the name of the profile. The maximum length of the name you can set is 32 characters.
Accept Any Peer ID	Click to accept any peer regardless of its identity.
Accept Subject Alternative Name	Click to check one specific field of digital signature to accept the peer with matching value. The field can be IP Address , Domain , or E-mail Address . The box under the Type will appear according to the type you select and ask you to fill in corresponding setting.
Accept Subject Name	Click to check the specific fields of digital signature to accept the peer with matching value. The field includes Country (C) , State (ST) , Location (L) , Organization (O) , Organization Unit (OU) , Common Name (CN) , and Email (E) .

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-8 OpenVPN

OpenVPN offers a convenient way for users to build VPN between local end and remote end.

With integrating of OpenVPN, Vigor router can help users to achieve more robust, reliable and secure private connections for business needs.

There are two advantages of OpenVPN:

- It can be operated on different systems such as Windows, Linux, and MacOS.
- Based on the standard protocol of SSL encryption, OpenVPN can provide you with a scalable client/server mode, permitting multi-client to connect to a single OpenVPN Server process over a single TCP or UDP port.

IV-1-8-1 OpenVPN Server Setup

Before establishing OpenVPN connection, general settings for OpenVPN service shall be configured first.

VPN and Remote Access >> OpenVPN

OpenVPN Server Setup **Client Config**

General Setup

UDP Enable
UDP Port
TCP Enable
TCP Port
Cipher Algorithm
HMAC Algorithm
Certificate Authentication

Certificates Setup

Certificate Source Router generated certificates
 Uploading certificates to Router

Trust CA
Server Certificate

Note: OpenVPN on vigor only support TUN device interface currently. So please setup corresponding configurations on the client side.

OK

Available settings are explained as follows:

Item	Description
Enable UDP	Check the box to enable UDP port setting for OpenVPN. UDP Port - Enter a number.
Enable TCP	Check the box to enable TCP port setting for OpenVPN. TCP Port - Enter a number.

Cipher Algorithm	Two encryptions are supported, AES128 and AES256.
HMAC Algorithm	The HMAC algorithm only supports SHA1/SHA256.
Certificate Authentication	If certificate authentication is required for OpenVPN, simply check the box to apply the trusted CA certificate and local certificate for OpenVPN tunnel. Certificate authentication can offer more secure VPN tunnel between the client and the router.
Certificate Source	Select a source for the certificate to be used for OpenVPN. Router generated certificates - Router-generated certificates that will be used for OpenVPN. <ul style="list-style-type: none"> ● GENERATE - Click to generate a certificate. ● Delete all certificate - Click to remove all certificates generated by the router. Uploading certificates to Router - Third-party certificates will be used for OpenVPN. <ul style="list-style-type: none"> ● Trust CA - Use the dropdown list to select a trusted CA certificate that has already been uploaded to the router. To upload Trusted CA certificates to the router, click the Trust CA label and you will be taken to the Certificate Management >> Trusted CA Certificate page to perform the operation. ● Server Certificate - Use the dropdown list to select a server certificate that has already been uploaded to the router. To upload server certificates to the router, click the Server Certificate label and you will be taken to the Certificate Management >> Local Certificate page to perform the operation.

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-8-2 Client Config

The settings on this page can be downloaded as a file. Later, such file can be imported and applied to remote end's CPE (as VPN client). Then, a private connection via OpenVPN tunnel between the server and the client can be connected successfully.

VPN and Remote Access >> OpenVPN ?

OpenVPN Server Setup Client Config

Remote Server IP Domain

Transport Protocol TCP

File Name .ovpn

CA cert .cert

Client cert .cert

Client key .key

Note:
Please make sure the CA files are located in the same folder with .ovpn file.

Available settings are explained as follows:

Item	Description
Remote Server	Click IP and use the drop down list to specify an IP address of WAN for VPN connection. Or click Domain to enter a domain name for the remote server.
Transport Protocol	Simply choose UDP or TCP as protocol for building OpenVPN connection between the server and the remote client.
Fine Name	Enter a name for the configuration file.
CA cert	Enter the certificate authority (CA) file name obtained from 3rd party provider
Client cert	Each client in an OpenVPN connection must have its certificate and private key. Enter the certificate file name obtained from 3rd party provider
Client key	Enter the private key file name obtained from 3rd party provider
Export	The settings in this page can be saved as a file after clicking such button. Later, the downloaded file can be imported to the VPN client for building OpenVPN connection.

IV-1-9 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection. You may set parameters including specified connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router provides 32 access accounts for dial-in users. Besides, you can extend the user accounts to the RADIUS server through the built-in RADIUS client function. The following figure shows the summary table.

---	---

Note:

1. Username can not contain characters ' " and \ .
2. OpenVPN tunnel does not support mOTP.

Available settings are explained as follows:

Item	Description
User account and Authentication	Enable this account - Check the box to enable this function. Idle Timeout - If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.
Allowed Dial-In Type	PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below. IPsec Tunnel - Allow the remote dial-in user to make an IPsec VPN connection through Internet. L2TP with IPsec Policy - Allow the remote dial-in user to

	<p>make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> ● None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ● Nice to Have - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ● Must -Specify the IPsec policy to be definitely applied on the L2TP connection. <p>SSL Tunnel - Allow the remote dial-in user to make an SSL VPN connection through Internet.</p> <p>OpenVPN Tunnel - Allow the remote dial-in user to set a VPN connection through OpenVPN.</p> <p>Specify Remote Node -You can specify the IP address of the remote dial-in user, ISDN number or peer ID (used in IKE aggressive mode).</p> <p>Uncheck the checkbox means the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p>Netbios Naming Packet -</p> <ul style="list-style-type: none"> ● Pass - Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> ● Pass - Click this button to let multicast packets pass through the router. ● Block - This is default setting. Click this button to let multicast packets be blocked by the router. <p>Username - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 23 characters.</p> <p>Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 19 characters.</p> <p>Enable Mobile One-Time Passwords (mOTP) - Check this box to make the authentication with mOTP function.</p> <p>PIN Code - Enter the code for authentication (e.g, 1234).</p> <p>Secret - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
<p>Subnet</p>	<p>Chose one of the subnet selections for such VPN profile.</p> <p>Assign Static IP Address - Please type a static IP address for the subnet you specified.</p>
<p>IKE Authentication Method</p>	<p>This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPsec tunnel either with or without specifying the IP address of the remote node.</p>

	<p>Pre-Shared Key - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p>Digital Signature (X.509) - Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the VPN and Remote Access >>IPsec Peer Identity.</p>
IPsec Security Method	<p>This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p>Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p>High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p>Local ID (Optional)- Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-10 LAN to LAN

Here you can manage LAN-to-LAN connections by maintaining a table of connection profiles. You may set parameters including specified connection direction (dial-in or dial-out), connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The following figure shows the summary table according to the item (All/Trunk) selected for View.

Pass Routing LAN to VPN
 Pass Packets to NAT when VPN disconnects

Backup setting to file:

Upload From File: 未選擇任何檔案

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all indexes.
Index	Click the number below Index to access into the setting page of LAN to LAN profile.
Enable	Check this box to enable this profile.
Name	Indicate the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Remote Network	Display the IP address/subnet mask of the remote network.
Status	Online - means such LAN to LAN profile is in use. Offline - means such LAN to LAN profile isn't in use even if the profile has been enabled.
Backup	Click Backup to save the configuration.
Restore	Click Select to choose a configuration file. Then click Restore to apply the file.

To edit each profile:

- Click each index to edit each profile and you will get the following page. Each LAN-to-LAN profile includes 4 subgroups. If the fields gray out, it means you may leave it untouched. The following explanations will guide you to fill all the necessary fields.

Profile Index : 1

Common Settings

Available settings are explained as follows:

Item	Description
Dial-In Settings	<p>Allowed VPN Type - Determine the dial-in connection with different types.</p> <ul style="list-style-type: none"> ● PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below. ● IPsec Tunnel- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet. ● IPsec XAuth - Allow the remote dial-in user to make an IPsec VPN connection after authenticated with the sever. ● L2TP with IPsec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below: <ul style="list-style-type: none"> ■ None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ■ Nice to Have - Apply the IPsec policy first, if it is

applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.

- **Must** - Specify the IPsec policy to be definitely applied on the L2TP connection.
- **SSL Tunnel**- Allow the remote dial-in user to trigger an SSL VPN connection through Internet.

Specify Remote VPN Gateway - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.

If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.

Username - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters.

Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters.

PPP Advanced Settings - Click it to configure advanced settings.

- **VJ Compression** - VJ Compression is used for TCP/IP protocol header compression. This field is applicable when you select PPTP or L2TP with or without IPsec policy above.
- **Assign Peer IP Address** - Enter the IP address of the peer.

Allowed IKE Authentication Method - This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPsec tunnel either with or without specify the IP address of the remote node.

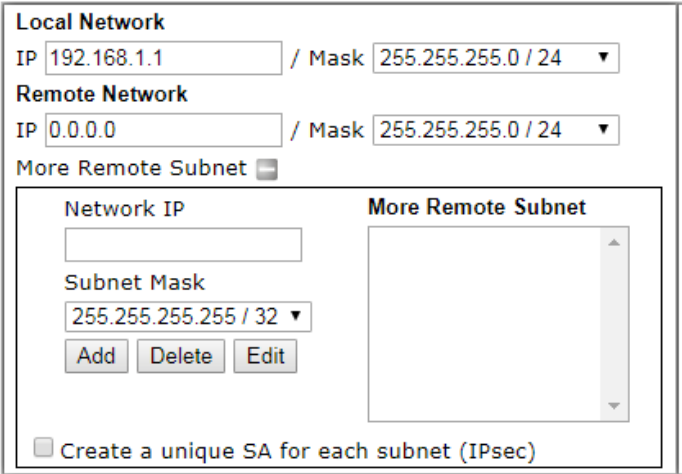

- **Pre-Shared Key** - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.
- **X.509 Digital Signature** - Check the box of Digital Signature to invoke this function and select one predefined Profiles set in the **VPN and Remote Access >>IPsec Peer Identity**.

Preferred Local ID - Specify which one will be inspected first.

- **Alternative Subject Name First** - The alternative subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.
- **Subject Name First** - The subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.

Allowed IPsec Security Method - This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy when you specify the remote node.

- **AH/ESP-DES/ESP-3DES/ESP-AES** - Authentication Header (AH) means data will be authenticated, but not
-

	<p>be encrypted. Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>
<p>Tunnel Settings</p>	<p>Enable IPsec Dial-Out function GRE over IPsec: Check this box to verify data and transmit data in encryption with GRE over IPsec packet after configuring IPsec Dial-Out setting. Both ends must match for each other by setting same virtual IP address for communication.</p> <p>Logical Traffic: Such technique comes from RFC2890. Define logical traffic for data transmission between both sides of VPN tunnel by using the characteristic of GRE. Even hacker can decipher IPsec encryption, he/she still cannot ask LAN site to do data transmission with any information. Such function can ensure the data transmitted on VPN tunnel is really sent out from both sides. This is an optional function. However, if one side wants to use it, the peer must enable it, too.</p> <p>Tunnel Local IP: Enter the virtual IP for router itself for verified by peer.</p> <p>Tunnel Remote IP: Enter the virtual IP of peer host for verified by router.</p>
<p>TCP/IP Network Settings</p>	<p>Local Network IP / Mask - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required.</p> <p>Remote Network IP / Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode.</p> <p>More Remote Subnet - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Masks through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.</p>  <p>Mode - If the remote network only allows you to dial in with single IP, please choose NAT, otherwise choose Route. For NAT,</p> <ul style="list-style-type: none"> ● Change default route to this VPN tunnel - Check this

box to change the default route with this VPN tunnel.

- **RIP via VPN** - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.

For Routing,

- **RIP via VPN** - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.
- **Translate Local Network** - This function is enabled in default.

When it is disabled, you can enable or disable **Change Default route to this VPN tunnel**.

Mode	<input checked="" type="radio"/> Routing <input type="radio"/> NAT
RIP via VPN	Disable ▾
Translate Local Network	<input type="checkbox"/> Enable
<hr/>	
<input type="checkbox"/> Change Default Route to this VPN tunnel	
(This only works if there is only one WAN online)	

Change default route to this VPN tunnel - Check this box to change the default route with this VPN tunnel.

When it is enabled, you have to specify type, local subnet, translated IP and more local subnet.

Mode	<input checked="" type="radio"/> Routing <input type="radio"/> NAT
Translate Local Network	<input checked="" type="checkbox"/> Enable
Type	Translate Whole Subnet ▾
Local Subnet	LAN1 ▾
Translated IP	192.168.1.0
More Local Subnet	<input data-bbox="922 1328 946 1350" type="button" value="+"/>

Type - There are two types for you to choose, **Translate Whole Subnet** and **Translate Specific IP**.

Local Subnet - Select the LAN whose IP addresses are to be translated.

Translate IP - Specify an IP address.

More Local Subnet - Click it to add more subnets.

When **Translate Specific IP** is selected as **Type**, available settings are listed as below:

2. After finishing all the settings here, please click **OK** to save the configuration.

IV-1-12 VPN Trunk Management

VPN trunk includes four features - VPN Backup, VPN load balance, GRE over IPsec, and Binding tunnel policy.

Features of VPN TRUNK – VPN Backup Mechanism

VPN TRUNK Management is a backup mechanism which can set multiple VPN tunnels as backup tunnel. It can assure the network connection not to be cut off due to network environment blocked by any reason.

- VPN TRUNK-VPN Backup mechanism can judge abnormal situation for the environment of VPN server and correct it to complete the backup of VPN Tunnel in real-time.
- VPN TRUNK-VPN Backup mechanism is compliant with all WAN modes (single/multi)
- Dial-out connection types contain IPsec, PPTP, L2TP, L2TP over IPsec and ISDN (depends on hardware specification)
- The web page is simple to understand and easy to configure
- Fully compliant with VPN Server LAN Site Single/Multi Network
- Mail Alert support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Syslog support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Specific ERD (Environment Recovery Detection) mechanism which can be operated by using Telnet command

VPN TRUNK-VPN Backup mechanism profile will be activated when initial connection of single VPN tunnel is off-line. Before setting VPN TRUNK -VPN Backup mechanism backup profile, please configure at least two sets of LAN-to-LAN profiles (with fully configured dial-out settings) first, otherwise you will not have selections for grouping Member1 and Member2.

VPN and Remote Access >> VPN TRUNK Management

Delete

Available settings are explained as follows:

Item	Description
Backup Profile List	<p>Set to Factory Default - Click to clear all VPN TRUNK-VPN Backup mechanism profile.</p> <p>No - The order of VPN TRUNK-VPN Backup mechanism profile.</p> <p>Status - "v" means such profile is enabled; "x" means such profile is disabled.</p> <p>Name - Display the name of VPN TRUNK-VPN Backup mechanism profile.</p> <p>Member1 - Display the dial-out profile selected from the Member1 drop down list below.</p> <p>Active - "Yes" means normal condition. "No" means the state might be disabled or that profile currently is set with Dial-in mode (for call direction) in LAN-to-LAN.</p> <p>Type - Display the connection type for that profile, such as IPsec, PPTP, L2TP, L2TP over IPsec (NICE), L2TP over IPsec(MUST) and so on.</p> <p>Member2 - Display the dial-out profile selected from the Member2 drop down list below.</p> <p>Advanced - This button is available only when LAN to LAN profile (or more) is created.</p>  <p>Detailed information for this dialog, see later section - Advanced Load Balance and Backup.</p>
General Setup	<p>Status- After choosing one of the profile listed above, please click Enable to activate this profile. If you click Disable, the selected or current used VPN TRUNK-Backup/Load Balance mechanism profile will not have any effect for VPN tunnel.</p> <p>Profile Name- Type a name for VPN TRUNK profile. Each profile can group two VPN connections set in LAN-to-LAN. The saved VPN profiles in LAN-to-LAN will be shown on Member1 and Member2 fields. The length of the name is limited to 11 characters.</p> <p>Member 1/Member2 - Display the selection for LAN-to-LAN dial-out profiles (configured in VPN and Remote Access >> LAN-to-LAN) for you to choose for grouping under certain VPN TRUNK-VPN Backup/Load Balance mechanism profile.</p> <ul style="list-style-type: none"> ● No - Index number of LAN-to-LAN dial-out profile. ● Name - Profile name of LAN-to-LAN dial-out profile. ● Connection Type - Connection type of LAN-to-LAN dial-out profile. ● VPN ServerIP (Private Network) - VPN Server IP of LAN-to-LAN dial-out profiles.

	<p>Active Mode - Display available mode for you to choose.</p> <p>Add - Add and save new profile to the backup profile list. The corresponding members (LAN-to-LAN profiles) grouped in such new VPN TRUNK - VPN Backup mechanism profile will be locked. The profiles in LAN-to-LAN will be displayed in red. VPN TRUNK - VPN Load Balance mechanism profile will be locked. The profiles in LAN-to-LAN will be displayed in blue.</p> <p>Update - Click this button to save the changes to the Status (Enable or Disable), profile name, member1 or member2.</p> <p>Delete - Click this button to delete the selected VPN TRUNK profile. The corresponding members (LAN-to-LAN profiles) grouped in the deleted VPN TRUNK profile will be released and that profiles in LAN-to-LAN will be displayed in black.</p>
--	---

Time for activating VPN TRUNK – VPN Backup mechanism profile

VPN TRUNK - VPN Backup mechanism will be activated automatically after the initial connection of single VPN Tunnel off-line. The content in Member1/2 within VPN TRUNK - VPN Backup mechanism backup profile is similar to dial-out profile configured in LAN-to-LAN web page. VPN TRUNK - VPN Backup mechanism backup profile will process and handle everything unless it is off-line once it is activated.

Time for activating VPN TRUNK –Dial-out when VPN Load Balance Disconnected

For there is one Tunnel created and connected successfully, to keep the load balance effect between two tunnels, auto-dial will be executed within two seconds.

To close two tunnels of load balance after connecting, please click **Disable** for **Status** in **General Setup** field.

How can you set a VPN TRUNK-VPN Backup/Load Balance mechanism profile?

1. First of all, go to **VPN and Remote Access>>LAN-to-LAN**. Set two or more LAN-to-LAN profiles first that will be used for Member1 and Member2. If you do not set enough LAN-to-LAN profiles, you cannot operate VPN TRUNK - VPN Backup /Load Balance mechanism profile management well.
2. Access into **VPN and Remote Access>>VPN TRUNK Management**.
3. Set one group of VPN TRUNK - VPN Backup/Load Balance mechanism backup profile by choosing **Enable** radio button; type a name for such profile (e.g., 071023); choose one of the LAN-to-LAN profiles from Member1 drop down list; choose one of the LAN-to-LAN profiles from Member2 drop down list; and click **Add** at last.

General Setup

Status: Enable Disable

Profile Name: 071023

Member1: Please choose the combination that you want.

Member2: Please choose the combination that you want.

Attribute Mode:

No.	<Name>	<Connection-Type>	<VPN ServerIP(Private Network)>
1	To-A PlaceIPSec		192.168.2.25(20.20.20.0)
2	To-B Site IPSec		192.168.2.26(20.20.21.0)

Add Edit Delete

4. Take a look for LAN-to-LAN profiles. Index 1 is chosen as Member1; index 2 is chosen as Member2. For such reason, LAN-to-LAN profiles of 1 and 2 will be expressed in red to indicate that they are fixed. If you delete the VPN TRUNK - VPN Backup/Load Balance mechanism profile, the selected LAN-to-LAN profiles will be released and expressed in black.

LAN-to-LAN Profiles:

View: All Trunk

Index	Name	Active	Status

3.	To-C Place	V	offline
4.	To-D Site	V	offline
5.	???	X	---

How can you set a GRE over IPsec profile?

1. Please go to LAN to LAN to set a profile with IPsec.
2. If the router will be used as the VPN Server (i.e., with virtual address 192.168.50.200). Please type 192.168.50.200 in the field of My GRE IP. Type IP address (192.168.50.100) of the client in the field of Peer GRE IP. See the following graphic for an example.

High(ESP) DES 3DES AES

4. Gre over IPsec Settings

Enable IPsec Dial-Out function GRE over IPsec
 Logical Traffic

My GRE IP: 192.168.50.200 Peer GRE IP: 192.168.50.100

5. TCP/IP Network Settings

My WAN IP: 0.0.0.0
Remote Gateway IP: 192.168.1.1
Remote Network IP: 192.168.1.0
Remote Network Mask: 255.255.255.0
Local Network IP: 192.168.25.1
Local Network Mask: 255.255.255.0

RIP Direction: Disable
From first subnet to remote network, you have to do: Route

Change default route to this VPN tunnel (Only single WAN supports this)

3. Later, on peer side (as VPN Client): please type 192.168.50.100 in the field of My GRE IP and type IP address of the server (192.168.50.200) in the field of Peer GRE IP.

High(ESP) DES 3DES AES

4. Gre over IPsec Settings

Enable IPsec Dial-Out function GRE over IPsec
 Logical Traffic

My GRE IP: 192.168.50.100 Peer GRE IP: 192.168.50.200

5. TCP/IP Network Settings

My WAN IP: 0.0.0.0
Remote Gateway IP: 192.168.25.1
Remote Network IP: 192.168.25.0
Remote Network Mask: 255.255.255.0
Local Network IP: 192.168.1.1
Local Network Mask: 255.255.255.0

RIP Direction: Disable
From first subnet to remote network, you have to do: Route

Change default route to this VPN tunnel (Only single WAN supports this)

Advanced Load Balance and Backup

After setting profiles for load balance, you can choose any one of them and click Advance for more detailed configuration. The windows for advanced load balance and backup are different. Refer to the following explanation:

Advanced Load Balance

Available settings are explained as follows:

Item	Description
Profile Name	List the load balance profile name.
Load Balance Algorithm	<p>Round Robin - Based on packet base, both tunnels will send the packet alternatively. Such method can reach the balance of packet transmission with fixed rate.</p> <p>Weighted Round Robin -Such method can reach the balance of packet transmission with flexible rate. It can be divided into Auto Weighted and According to Speed Ratio. Auto Weighted can detect the device speed (10Mbps/100Mbps) and switch with fixed value ratio (3:7) for packet transmission. If the transmission rate for packets on both sides of the tunnels is the same, the value of Auto Weighted should be 5.5. According to Speed Ratio allows user to adjust suitable rate manually. There are 100 groups of rate ratio for Member1:Member2 (range from 1:99 to 99:1).</p>
VPN Load Balance Policy	<p>Below shows the algorithm for Load Balance.</p> <p>Edit - Click this radio button for assign a blank table for configuring Binding Tunnel.</p> <p>Insert after - Click this radio button to adding a new binding</p>

	<p>tunnel table.</p> <p>Tunnel Bind Table Index- 128 Binding tunnel tables are provided by this device. Specify the number of the tunnel for such Load Balance profile.</p> <p>Active - In-active/Delete can delete this binding tunnel table. Active can activate this binding tunnel table.</p> <p>Binding Dial Out Index - Specify connection type for transmission by choosing the index (LAN to LAN Profile Index) for such binding tunnel table.</p> <p>Scr IP Start /End- Specify source IP addresses as starting point and ending point.</p> <p>Dest IP Start/End - Specify destination IP addresses as starting point and ending point.</p> <p>Dest Port Start /End- Specify destination service port as starting point and ending point.</p> <p>Protocol - Any means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here, such binding tunnel table can be established for TCP Service Port/UDP Service Port/ICMP/IGMP specified here.</p> <p>TCP means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and TCP Service Port also fits the number here, such binding tunnel table can be established. UDP means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and UDP Service Port also fits the number here, such binding tunnel table can be established. TCP/UPD means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and TCP/UDP Service Port also fits the number here, such binding tunnel table can be established. ICMP means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and ICMP Service Port also fits the number here, such binding tunnel table can be established. IGMP means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and IGMP Service Port also fits the number here, such binding tunnel table can be established. Other means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here with different TCP Service Port/UDP Service Port/ICMP/IGMP, such binding tunnel table can be established.</p>
<p>Detail Information</p>	<p>This field will display detailed information for Binding Tunnel Policy. Below shows a successful binding tunnel policy for load balance:</p>

VPN Load Balance Advance Settings

xxxxxxxx : Data is encrypted. xxxxxxxx : Data isn't encrypted.								

Available settings are explained as follows:

Item	Description
Dial-out Tool	<p>General Mode - This field displays the profile configured in LAN-to-LAN (with Index number and VPN Server IP address). The VPN connection built by General Mode does not support VPN backup function.</p>  <p>Backup Mode - This field displays the profile name saved in VPN TRUNK Management (with Index number and VPN Server IP address). The VPN connection built by Backup Mode supports VPN backup function.</p> 

Dial - Click this button to execute dial out function.

Refresh Seconds - Choose the time for refresh the dial information among 5, 10, and 30.

Refresh - Click this button to refresh the whole connection status.

Application Notes

A-1 How to Build a LAN-to-LAN VPN Between Vigor Routers via IPsec Main Mode

This document introduces how to set up Main mode IPsec Tunnel between two Vigor Routers. IPsec VPN with Main mode use the IP address of VPN client as identifier, and the IP address must be set on VPN server; therefore, if the VPN client doesn't have a static IP, please use Aggressive mode instead.

VPN Server (Dial-In Site) Setup

1. Create a Dial-In profile for VPN user, go to VPN and Remote Access >> LAN to LAN, click on an available index to add a new profile.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles:

 - (f) Click on IKE Pre-Shared Key and enter the Pre-shared Key.
 - (g) Select the IPsec Security Method that are allowed to use.
3. In TCP/IP Network Settings, enter VPN Client's LAN network in Remote Network IP and Remote Network Mask. Click OK to save the profile.

5. TCP/IP Network Settings

My WAN IP	<input type="text" value="0.0.0.0"/>	RIP Direction	Disable
Remote Gateway IP	<input type="text" value="0.0.0.0"/>	From first subnet to remote network, you have to do	Route
Remote Network IP	<input type="text" value="192.168.1.1"/>	<input type="checkbox"/> IPsec VPN with the Same Subnets	
Remote Network Mask	<input type="text" value="255.255.255.0"/>	<input type="checkbox"/> Change default route to this VPN tunnel (Only single WAN supports this)	
Local Network IP	<input type="text" value="192.168.30.1"/>		
Local Network Mask	<input type="text" value="255.255.255.0"/>		

VPN Client (Dial-out Site) Setup

1. Create a Dial-out profile to VPN server: Go to VPN and Remote Access >> LAN to LAN, click on an available index to add a new profile.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles:

[Set to Factory Default](#)

View: All Trunk

Index	Name	Active	Status	Index	Name	Active	Status
<u>1.</u>	???	<input type="checkbox"/>	---	<u>17.</u>	???	<input type="checkbox"/>	---
<u>2.</u>	???	<input type="checkbox"/>	---	<u>18.</u>	???	<input type="checkbox"/>	---
<u>3.</u>	???	<input type="checkbox"/>	---	<u>19.</u>	???	<input type="checkbox"/>	---

2. Setup the dial-out profile.

In Common Settings,

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

Profile Name <input type="text" value="Client"/>	Call Direction <input type="radio"/> Both <input checked="" type="radio"/> Dial-Out <input type="radio"/> Dial-in
<input checked="" type="checkbox"/> Enable this profile	<input type="checkbox"/> Always on
VPN Dial-Out Through <input type="text" value="WAN1 First"/>	Idle Timeout <input type="text" value="300"/> second(s)
Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block	<input type="checkbox"/> Enable PING to keep IPsec tunnel alive
Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block	PING to the IP <input type="text"/>
(for some IGMP,IP-Camera,DHCP Relay..etc.)	

- (a) Enter a Profile Name.
- (b) Enable this profile.
- (c) Set Call Direction to Dial-Out.

In Dial-out Setting,

2. Dial-Out Settings

- (d) Select IPsec Tunnel for Type of Sever I am Calling.
- (e) Enter VPN Server's WAN IP or domain name in Sever IP/Host Name for VPN.
- (f) Click IKE Pre-Shared Key and enter the same Pre-Shared key as VPN Server.
- (g) Click on Advanced in IPsec Security Method.

In IKE advanced settings,

Note: If you select "Auto" in IKE phase 1 proposal, the router will send the following proposals to negotiate with the remote site. The proposals are: DES_(MD5/SHA)_G1, 3DES_MD5_G1, 3DES_MD5_G2, 3DES_(MD5/SHA)_G5, AES128_MD5_(G2/G5), AES256_SHA_(G2/G5), AES256_...

- (h) Select Main Mode for IKE phase 1 mode.
- (i) Make sure phase 1 and phase 2 proposal are using the security methods which are accepted by VPN server.
- (j) Click OK to save.

3. In TCP/IP Network Settings, enter VPN Server's LAN Network in Remote Network IP and Remote Network Mask. Click OK to save the profile.

5. TCP/IP Network Settings

My WAN IP	0.0.0.0	RIP Direction	Disable ▼
Remote Gateway IP	0.0.0.0	From first subnet to remote network, you have to do	
Remote Network IP	192.168.30.1	Route ▼	
Remote Network Mask	255.255.255.0	<input type="checkbox"/> IPsec VPN with the Same Subnets	
Local Network IP	192.168.1.1	<input type="checkbox"/> Change default route to this VPN tunnel (Only single WAN supports this)	
Local Network Mask	255.255.255.0		
<input type="button" value="More"/>			

VPN Tunnel Establishment

To initiate the VPN connection, go to **VPN and Remote Access >> Connection Management** on **VPN Client**. Select the profile to **VPN Sever** and click **Dial**.

VPN and Remote Access >> Connection Management

Dial-out Tool		Refresh Seconds : 10 ▼	<input type="button" value="Refresh"/>
General Mode:	(Client) .39.141 ▼	<input type="button" value="Dial"/>	
Backup Mode:	▼	<input type="button" value="Dial"/>	
Load Balance Mode:	▼	<input type="button" value="Dial"/>	

If all the settings are matched, the VPN will be established, and the statistics will be displayed on the same page.

A-2 How to Build a LAN-to-LAN VPN Between Vigor Routers via IKEv2

Modified from the previous version IKEv1, IKEv2 is a new VPN protocol and has lots of improvements then the former. It is more stable, more secure and faster connection establishing speed. Support newer and more complicated secure ciphers to make the connection more secure. Using new connection progress and discard the PPP, IKEv2 provides the faster establishing speed.

This application note demonstrates how to establish IKEv2 VPN connection between two Vigor Routers by the following topology.

VPN Server Settings

1. Go to VPN and Remote Access >> IPsec General Setup.

VPN and Remote Access >> IPsec General Setup

VPN IKE/IPsec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

IKE Authentication Method	
Certificate for Dial-in	None ▼
Pre-Shared Key	
Pre-Shared Key
Confirm Pre-Shared Key
IPsec Security Method	
<input checked="" type="checkbox"/> Medium (AH)	Data will be authentic, but will not be encrypted.
High (ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES	Data will be encrypted and authentic.

OK Cancel

- (a) Input Pre-shared Key and Confirm Pre-Shared Key.
 - (b) Click OK.
2. Go to VPN and Remote Access >> LAN to LAN and click an available index.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

- Give a Profile Name.
- Check **Enable this profile**.
- Select **Dial-Out** as **Call Direction**.
- Select **IPsec Tunnel** with **IKEv2** in **Dial-Out Settings**.

- (e) Input VPN server's WAN IP or domain name at **Server IP/Host Name for VPN**.
 - (f) Input **Pre-Shared Key** of VPN server.
2. In TCP/IP Network Settings, input the IP address of LAN_S as Remote Network IP and Remote Network Mask. Click **OK** to save the profile.

IV-2 Certificate Management

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

Any entity wants to utilize digital certificates should first request a certificate issued by a CA server. It should also retrieve certificates of other trusted CA servers so it can authenticate the peer with certificates issued by those trusted CA servers.

Here you can manage generate and manage the local digital certificates, and set trusted CA certificates. Remember to adjust the time of Vigor router before using the certificate so that you can get the correct valid period of certificate.

Below shows the menu items for Certificate Management.

Web User Interface

IV-2-1 Local Certificate

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
DrayDDNS	/CN=v2915justin.drayddns.com	Not Valid Yet	<input type="button" value="View"/>	<input type="button" value="Delete"/>
openvpn client	/C=TW/ST=HsinChu/L=HuKou/O=D...	Not Valid Yet	<input type="button" value="View"/>	<input type="button" value="Delete"/>
openvpn server	/C=TW/ST=HsinChu/L=HuKou/O=D...	Not Valid Yet	<input type="button" value="View"/>	<input type="button" value="Delete"/>

Note:

1. Please setup the "System Maintenance >> [Time and Date](#)" correctly before signing the local certificate.
2. The Time Zone MUST be setup correctly!!

Available settings are explained as follows:

Item	Description
Generate	Click this button to open Generate Certificate Request window. Type in all the information that the window requests. Then click Generate again.
Import	Click this button to import a saved file as the certification information.
Refresh	Click this button to refresh the information listed below.
View	Click this button to view the detailed settings for certificate request.
Delete	Click this button to delete selected name with certification information.

GENERATE

Click this button to open Generate Certificate Signing Request window. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click GENERATE again.

Generate Certificate Signing Request

Generate

Info

Please be noted that "Common Name" must be configured with router's WAN IP or domain name.

After clicking **GENERATE**, the generated information will be displayed on the window below:

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
server	/C=TW/ST=Hsinchu/L=Hsinchu/O...	Requesting	View	Delete
---	---	---	View	Delete
---	---	---	View	Delete

GENERATE IMPORT REFRESH

IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as "Local Certificate". If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

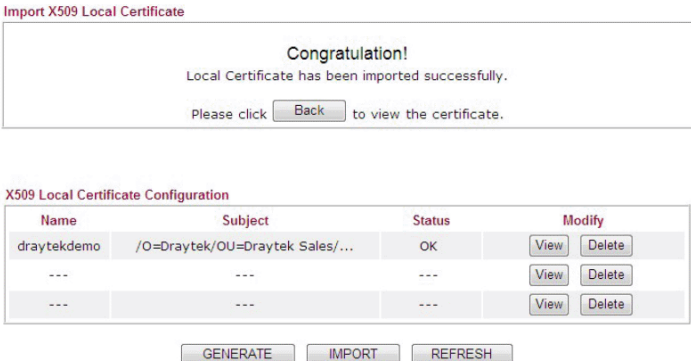

Import X509 Local Certificate

Upload Local Certificate
 Select a local certificate file.
 Certificate file:
 Click **Import** to upload the local certificate.

Upload PKCS12 Certificate
 Select a PKCS12 file.
 PKCS12 file:
 Password:
 Click **Import** to upload the PKCS12 file.

Upload Certificate and Private Key
 Select a certificate file and a matchable Private Key.
 Certificate file:
 Key file:
 Password:
 Click **Import** to upload the local certificate and private key.

Available settings are explained as follows:

Item	Description																				
Upload Local Certificate	<p>It allows users to import the certificate which is generated by Vigor router and signed by CA server.</p> <p>If you have done well in certificate generation, the Status of the certificate will be shown as "OK".</p>  <p>The screenshot shows a 'Congratulations!' message: 'Local Certificate has been imported successfully. Please click <input type="button" value="Back"/> to view the certificate.'</p> <p>Below is the 'X509 Local Certificate Configuration' table:</p> <table border="1"> <thead> <tr> <th>Name</th> <th>Subject</th> <th>Status</th> <th colspan="2">Modify</th> </tr> </thead> <tbody> <tr> <td>draytekdemo</td> <td>/O=Draytek/OU=Draytek Sales/...</td> <td>OK</td> <td><input type="button" value="View"/></td> <td><input type="button" value="Delete"/></td> </tr> <tr> <td>---</td> <td>---</td> <td>---</td> <td><input type="button" value="View"/></td> <td><input type="button" value="Delete"/></td> </tr> <tr> <td>---</td> <td>---</td> <td>---</td> <td><input type="button" value="View"/></td> <td><input type="button" value="Delete"/></td> </tr> </tbody> </table> <p>Buttons: <input type="button" value="GENERATE"/> <input type="button" value="IMPORT"/> <input type="button" value="REFRESH"/></p>	Name	Subject	Status	Modify		draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	<input type="button" value="View"/>	<input type="button" value="Delete"/>	---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>	---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>
Name	Subject	Status	Modify																		
draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	<input type="button" value="View"/>	<input type="button" value="Delete"/>																	
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>																	
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>																	
Upload PKCS12 Certificate	<p>It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords.</p> <p>Note that PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options.</p>																				
Upload Certificate and Private Key	<p>It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted.</p>																				

REFRESH

Click this button to refresh the information listed below.

View

Click this button to view the detailed settings for certificate request.

Info

You have to copy the certificate request information from above window. Next, access your CA server and enter the page of certificate request, copy the information into it and submit a request. A new certificate will be issued to you by the CA server. You can save it.

Delete

Click this button to remove the selected certificate.

IV-2-2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate. In addition, you can build a RootCA certificate if required.

When the local client and remote client are required to make certificate authentication (e.g., IPsec X.509) for data passing through SSL tunnel and avoiding the attack of MITM, a trusted root certificate authority (Root CA) will be used to authenticate the digital certificates offered by both ends.

However, the procedure of applying digital certificate from a trusted root certificate authority is complicated and time-consuming. Therefore, Vigor router offers a mechanism which allows you to generate root CA to save time and provide convenience for general user. Later, such root CA generated by DrayTek server can perform the issuing of local certificate.

Info

Root CA can be deleted but not edited. If you want to modify the settings for a Root CA, please delete the one and create another one by clicking Create Root CA.

Certificate Management >> Trusted CA Certificate

X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify
	---	---	Create Root CA
Trusted CA-1	/C=TW/ST=HsinChu/L=HuKou/O=D...	Not Yet Valid	View Delete
Trusted CA-2	/C=TW/CN=ROOT2915ting/emailA...	Not Yet Valid	View Delete
Trusted CA-3	---	---	View Delete

Note:

1. Please setup the "System Maintenance >> [Time and Date](#)" correctly before you try to generate a RootCA!!
2. The Time Zone MUST be setup correctly!!

IMPORT

REFRESH

Creating a Root CA

Click Create to open the following page. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click **Generate** again. Click the **Fill the default value** button to enter related values automatically.

Generate Root CA

Certificate Name	Root CA	<input type="button" value="Fill the default value"/>
Subject Alternative Name		
Type	IP Address ▼	
IP	<input type="text"/>	
Subject Name		
Country (C)	<input type="text"/>	
State (ST)	<input type="text"/>	
Location (L)	<input type="text"/>	
Organization (O)	<input type="text"/>	
Organization Unit (OU)	<input type="text"/>	
Common Name (CN)	<input type="text"/>	
Email (E)	<input type="text"/>	
Key Type	RSA ▼	
Key Size	1024 Bit ▼	
Algorithm	SHA-256 ▼	

Importing a Trusted CA

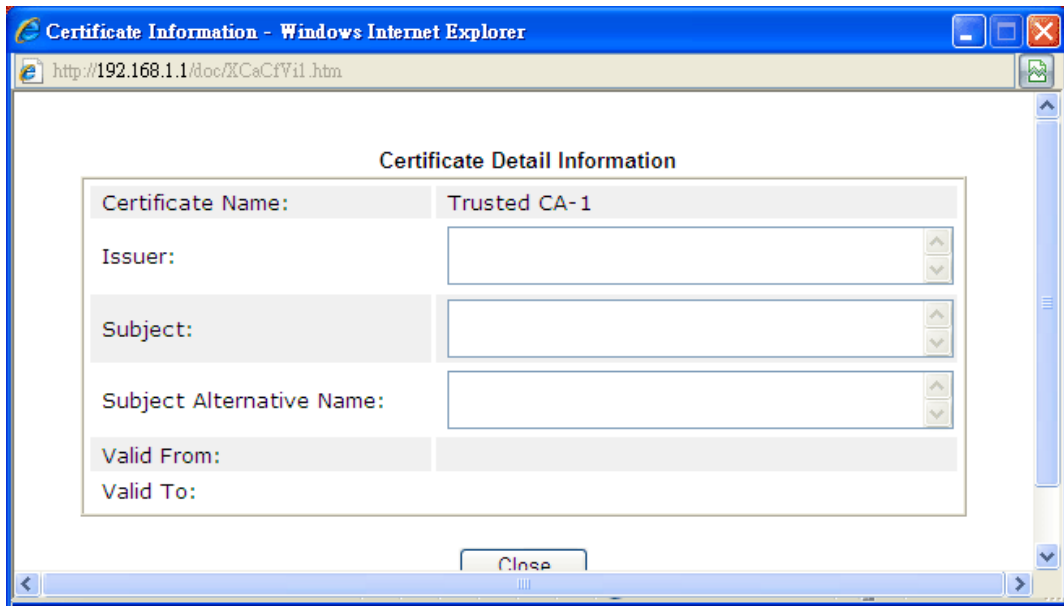

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window. Use **Browse...** to find out the saved text file. Then click **Import**. The one you imported will be listed on the Trusted CA Certificate window.

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Click **Import** to upload the certification.

For viewing each trusted CA certificate, click **View** to open the certificate detail information window. If you want to delete a CA certificate, choose the one and click **Delete** to remove all the certificate information.

IV-2-3 Certificate Backup

Local certificate and Trusted CA certificate for this router can be saved within one file. Please click **Backup** on the following screen to save them. If you want to set encryption password for these certificates, please type characters in both fields of **Encrypt password** and **Confirm password**.

Also, you can use **Restore** to retrieve these two settings to the router whenever you want.

Certificate Management >> Certificate Backup

Certificate Backup / Restoration

Backup

Encrypt password:

Confirm password:

Click to download certificates to your local PC as a file.

Restoration

Select a backup file to restore.

Decrypt password:

Click to upload the file.

IV-2-4 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

Self-Signed Certificate Information

Certificate Name :	self-signed
Issuer :	C=TW, ST=HsinChu, L=HuKou, O=DrayTek Corp., OU=DrayTek Support, CN=Vigor Router
Subject :	C=TW, ST=HsinChu, L=HuKou, O=DrayTek Corp., OU=DrayTek Support, CN=Vigor Router
Subject Alternative Name :	
Valid From :	May 7 09:15:10 2019 GMT
Valid To :	May 6 09:15:10 2049 GMT

Note:

1. Please setup the **System Maintenance >> Time and Date** correctly before you try to regenerate a self-signed certificate!!
2. The Time Zone MUST be setup correctly!!

Regenerate

Click **Regeneration** to open **Regenerate Self-Signed Certificate** window. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click **GENERATE**.

This page is left blank.

Part V Security

Firewall

CSM

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet.

CSM is an abbreviation of Central Security Management which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

V-1 Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet. Furthermore, it can filter out specific packets that trigger the router to build an unwanted outgoing connection.

Firewall Facilities

The users on the LAN are provided with secured protection by the following firewall facilities:

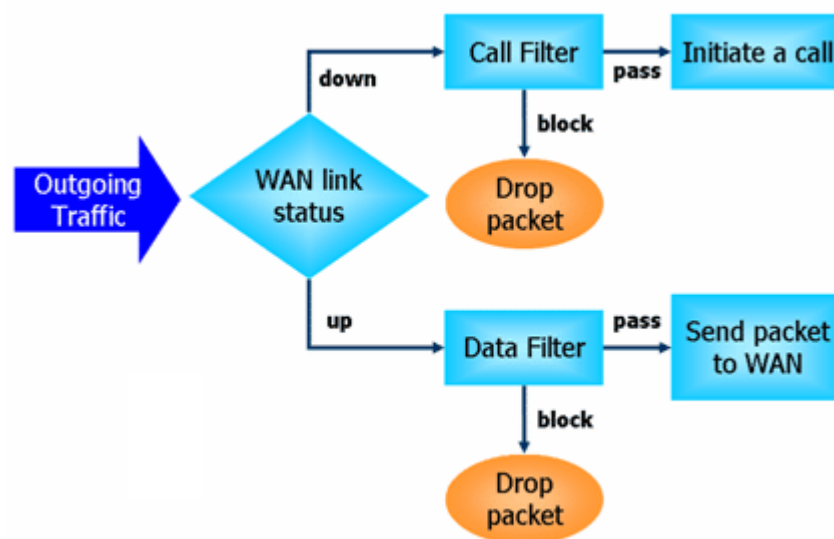

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: Call Filter and Data Filter.

- **Call Filter** - When there is no existing Internet connection, Call Filter is applied to all traffic, all of which should be outgoing. It will check packets according to the filter rules. If legal, the packet will pass. Then the router shall “initiate a call” to build the Internet connection and send the packet to Internet.
- **Data Filter** - When there is an existing Internet connection, Data Filter is applied to incoming and outgoing traffic. It will check packets according to the filter rules. If legal, the packet will pass the router.

The following illustrations are flow charts explaining how router will treat incoming traffic and outgoing traffic respectively.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not only examines the header information also monitors the state of the connection.

Denial of Service (DoS) Defense

The DoS Defense functionality helps you to detect and mitigate the DoS attack. The attacks are usually categorized into two types, the flooding-type attacks and the vulnerability attacks. The flooding-type attacks will attempt to exhaust all your system's resource while the vulnerability attacks will try to paralyze the system by offending the vulnerabilities of the protocol or operation system.

The DoS Defense function enables the Vigor router to inspect every incoming packet based on the attack signature database. Any malicious packet that might duplicate itself to paralyze the host in the secure LAN will be strictly blocked and a Syslog message will be sent as warning, if you set up Syslog server.

Also the Vigor router monitors the traffic. Any abnormal traffic flow violating the pre-defined parameter, such as the number of thresholds, is identified as an attack and the Vigor router will activate its defense mechanism to mitigate in a real-time manner.

The below shows the attack types that DoS/DDoS defense function can detect:

- | | |
|----------------------|--------------------------|
| 1. SYN flood attack | 9. SYN fragment |
| 2. UDP flood attack | 10. Fraggle attack |
| 3. ICMP flood attack | 11. TCP flag scan |
| 4. Port Scan attack | 12. Tear drop attack |
| 5. IP options | 13. Ping of Death attack |
| 6. Land attack | 14. ICMP fragment |
| 7. Smurf attack | 15. Unassigned Numbers |
| 8. Trace route | |

Web User Interface

Below shows the menu items for Firewall.

V-1-1 General Setup

General Setup allows you to adjust settings of IP Filter and common options. Here you can enable or disable the Call Filter or Data Filter. Under some circumstance, your filter set can be linked to work in a serial manner. So here you assign the Start Filter Set only. Also you can configure the Log Flag settings, Apply IP filter to VPN incoming packets, and Accept incoming fragmented UDP packets.

Click Firewall and click General Setup to open the general setup page.

General Setup Page

Such page allows you to enable / disable Call Filter and Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

General Setup

General Setup	Default Rule
<p>Call Filter</p> <p> <input checked="" type="radio"/> Enable Start Filter Set: <input type="text" value="Set#1"/> <input type="radio"/> Disable </p>	
<p>Data Filter</p> <p> <input checked="" type="radio"/> Enable Start Filter Set: <input type="text" value="Set#2"/> <input type="radio"/> Disable </p>	
<p><input checked="" type="checkbox"/> Always pass inbound fragmented large packets (required for certain games and streaming)</p> <p><input checked="" type="checkbox"/> Enable Strict Security Firewall</p> <p>Block connections initiated from WAN <input type="checkbox"/> IPv4 <input checked="" type="checkbox"/> IPv6</p>	

Note:

Packets are filtered by firewall functions in the following order:
 1.Data Filter Sets and Rules 2.Block connections initiated from WAN 3.Default Rule

Backup Firewall : <input type="button" value="Backup"/>	Restore Firewall: <input type="button" value="選擇檔案"/> 未選擇任何檔案 <input type="button" value="Restore"/>
---	--

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Call Filter	Check Enable to activate the Call Filter function. Assign a start filter set for the Call Filter.

Data Filter	Check Enable to activate the Data Filter function. Assign a start filter set for the Data Filter.
Always pass inbound fragmented large packets...	Some on-line games (for example: Half Life) will use lots of fragmented UDP packets to transfer game data. Instinctively as a secure firewall, Vigor router will reject these fragmented packets to prevent attack unless you enable " Always pass inbound fragmented large packets... ". By checking this box, you can play these kinds of on-line games. If security concern is in higher priority, you cannot enable " Always pass inbound fragmented large packets... ".
Enable Strict Security Firewall	For the sake of security, the router will execute strict security checking for data transmission. Such feature is enabled in default. All the packets, while transmitting through Vigor router, will be filtered by firewall. If the firewall system (e.g., content filter server) does not make any response (pass or block) for these packets, then the router's firewall will block the packets directly.
Block connections initiated from WAN	Usually, IPv6 network sessions/traffic from WAN to LAN will be accepted by IPv6 firewall in default. IPv6 - To prevent remote client accessing into the PCs on LAN, check the box to make the packets (routed from WAN to LAN) via IPv6 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT. IPv4 - To prevent remote client accessing into the PCs on LAN, check the box to make the incoming packets via IPv4 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT.
Backup Firewall	Click Backup to save the firewall configuration.
Restore Firewall	Click Select to choose a firewall configuration file. Then click Restore to apply the file.

Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter, for data transmission via Vigor router.

Firewall >> General Setup

General Setup

General Setup **Default Rule**

Actions for default rule:

Application	Action/Profile	Syslog
Filter	Pass ▾	<input type="checkbox"/>
Sessions Control	0 / 30000	<input type="checkbox"/>
<u>Quality of Service</u>	None ▾	<input type="checkbox"/>

Advance Setting

Backup Firewall :

Restore Firewall: 未選擇任何檔案

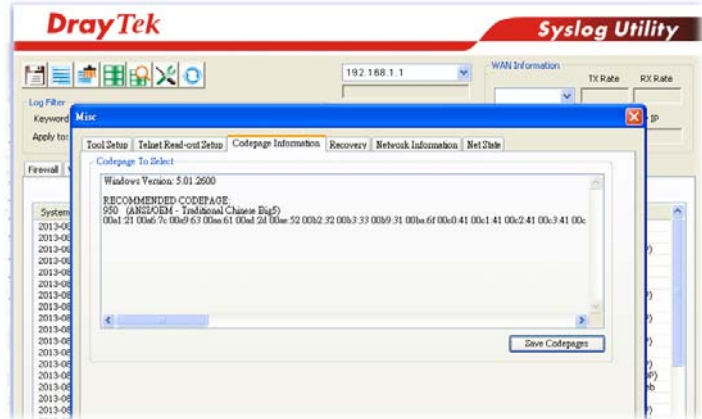

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Filter	Select Pass or Block for the packets that do not match with the filter rules.
Sessions Control	The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 50000.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	Such item is available only when Rule-Based is selected in User Management>>General Setup . The general firewall rule will be applied to the user/user group/all users specified here. When there is no user profile or group profile existed, Create New User or Create New Group item will appear for you to click to create a new one.
APP Enforcement	Select an APP Enforcement profile for global IM/P2P

	<p>application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
<p>URL Content Filter</p>	<p>Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
<p>Web Content Filter</p>	<p>Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
<p>DNS Filter</p>	<p>Select one of the DNS Filter profile settings (created in CSM>>DNS Filter) for applying with this router. Please set at least one profile in CSM>> Web Content Filter web page first. Or click the DNS Filter link in this page to create a new profile.</p>
<p>Advance Setting</p>	<p>Click Edit to open the following window. However, it is strongly recommended to use the default settings here.</p> <p>Firewall >> General Setup</p> <div data-bbox="715 1435 1385 1653" style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p>Advance Setting</p> <p>Codepage: <input type="text" value="ANSI(1252)-Latin I"/></p> <p>Window size: <input type="text" value="65535"/></p> <p>Session timeout: <input type="text" value="1440"/> Minute</p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Close"/> </p> </div> <p>Codepage - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtain correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.</p> <p>If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.</p>

Window size - It determines the size of TCP protocol (0-65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout - Setting timeout for sessions can make the best utilization of network resources.

After finishing all the settings here, please click **OK** to save the configuration.

V-1-2 Filter Setup

Click Firewall and click Filter Setup to open the setup page.

Firewall >> Filter Setup

Filter Setup				Set to Factory Default
Set	Comments	Set	Comments	
1.	Default Call Filter	7.		
2.	Default Data Filter	8.		
3.		9.		
4.		10.		
5.		11.		
6.		12.		

To edit or add a filter, click on the set number to edit the individual set. The following page will be shown. Each filter set contains up to 7 rules. Click on the rule number button to edit each rule. Check Active to enable the rule.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Wizard Mode: most frequently used settings in three pages
 Advance Mode: all settings in one page

Available settings are explained as follows:

Item	Description
Filter Rule	Click a button numbered (1 ~ 7) to edit the filter rule. Click the button will open Edit Filter Rule web page. For the detailed information, refer to the following page.
Active	Enable or disable the filter rule.
Comment	Enter filter set comments/description. Maximum length is 23-character long.
Direction	Display the direction of packet.
Src IP / Dst IP	Display the IP address of source /destination.
Service Type	Display the type and port number of the packet.

Action	Display the packets to be passed /blocked.
CSM	Display the content security managed
Move Up/Down	Use Up or Down link to move the order of the filter rules.
Next Filter Set	Set the link to the next filter set to be executed after the current filter run. Do not make a loop with many filter sets.
Wizard Mode	Allow to configure frequently used settings for filter rule via several setting pages.
Advance Mode	Allow to configure detailed settings of filter rule.

To use Wizard Mode, simple do the following steps:

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1

Firewall Rule applies to packets that meet the following criteria

Comments:

Direction:

Source IP:

Start IP Address

End IP Address

Subnet Mask

Destination IP:

Start IP Address

End IP Address

Subnet Mask

Protocol:

Source Port

Destination Port

Available settings are explained as follows:

Item	Description
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Direction	Set the direction of packet flow. It is for Data Filter only. For the Call Filter , this setting is not available since Call Filter is only applied to outgoing traffic. Note: RT means routing domain for 2nd subnet or other LAN.
Source IP / Destination IP	To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and Enter them in this dialog.
Protocol	Specify the protocol(s) which this filter rule will apply to.

Source Port / Destination Port	<p>(=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(>) - the port number greater than this value is available.</p> <p>(<) - the port number less than this value is available for this profile.</p>
--------------------------------	--

Advance Setting [Edit]

[OK] [Clear] [Cancel]

Available settings are explained as follows:

Item	Description
Check to enable the Filter Rule	Check this box to enable the filter rule.
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Schedule Profile	Set PCs on LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.
Clear sessions when schedule ON	Check this box to clear the sessions when the above schedule profiles are applied.
Direction	Set the direction of packet flow. It is for Data Filter only. For the Call Filter , this setting is not available since Call Filter is only applied to outgoing traffic. Note: RT means routing domain for 2nd subnet or other LAN.
Source IP and Destination IP	Click Edit to access into the following dialog to specify an IP address or choose an IP object as source IP or destination IP.

	<p>IP Address Edit</p>  <p>To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and Enter them in this dialog. In addition, if you want to use the IP range from defined groups or objects or any IP in a country, please choose Group and Objects as the Address Type.</p> <p>From the IP Group/IPv6 Group drop down list, choose the one that you want to apply. Or use the IP Object / IPv6 Group drop down list to choose the object that you want.</p>
<p>Service Type</p>	<p>Click Edit to access into the following dialog to choose a suitable service type.</p>  <p>To set the service type manually, please choose User defined as the Service Type and Enter them in this dialog. In addition, if you want to use the service type from defined groups or objects, please choose Group and Objects as the Service Type.</p> <p>Protocol - Specify the protocol(s) which this filter rule will apply to.</p> <p>Source/Destination Port -</p> <p>(=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(>) - the port number greater than this value is available.</p> <p>(<) - the port number less than this value is available for this profile.</p> <p>Service Group/Object - Use the drop down list to choose the one that you want.</p>
<p>Fragments</p>	<p>Specify the action for fragmented packets. And it is used for Data Filter only.</p>

	<p><i>Don't care</i> -No action will be taken towards fragmented packets.</p> <p><i>Unfragmented</i> -Apply the rule to unfragmented packets.</p> <p><i>Fragmented</i> - Apply the rule to fragmented packets.</p> <p><i>Too Short</i> - Apply the rule only to packets that are too short to contain a complete header.</p>
Filter	<p>Specifies the action to be taken when packets match the rule.</p> <p>Block Immediately - Packets matching the rule will be dropped immediately.</p> <p>Pass Immediately - Packets matching the rule will be passed immediately.</p> <p>Block If No Further Match - A packet matching the rule, and that does not match further rules, will be dropped.</p> <p>Pass If No Further Match - A packet matching the rule, and that does not match further rules, will be passed through.</p>
Branch to other Filter Set	<p>If the packet matches the filter rule, the next filter rule will branch to the specified filter set. Select next filter rule to branch from the drop-down menu. Be aware that the router will apply the specified filter rule for ever and will not return to previous filter rule any more.</p>
Sessions Control	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
MAC Bind IP	<p>Strict – Make the MAC address and IP address settings configured in IP Object for Source IP and Destination IP are bound for applying such filter rule.</p> <p>No-Strict - no limitation.</p>
Quality of Service	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p>
User Management	<p>Such item is available only when Rule-Based is selected in User Management>>General Setup. The general firewall rule will be applied to the user/user group/all users specified here.</p> <p>Note: When there is no user profile or group profile existed, Create New User or Create New Group item will appear for you to click to create a new one.</p>
APP Enforcement	<p>Select an APP Enforcement profile for global IM/P2P application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
URL Content Filter	<p>Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create</p>

	<p>a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
<p>Web Content Filter</p>	<p>Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>
<p>DNS Filter</p>	<p>Select one of the DNS Filter profile settings (created in CSM>>DNS Filter) for applying with this router. Please set at least one profile in CSM>> Web Content Filter web page first. Or click the DNS Filter link from the drop down list in this page to create a new profile.</p>
<p>Advance Setting</p>	<p>Click Edit to open the following window. However, it is strongly recommended to use the default settings here.</p> <p>Firewall >> Edit Filter Set >> Edit Filter Rule</p> <hr/> <p>Filter Set 1 Rule 1</p> <div data-bbox="719 972 1390 1234" style="border: 1px solid black; padding: 5px;"> <p>Advance Setting</p> <p>Codepage: ANSI(1252)-Latin I ▼</p> <p>Window size: 65535</p> <p>Session timeout: 60 Minute</p> <p>DrayTek Banner: <input checked="" type="checkbox"/></p> <hr/> <p>Strict Security Checking</p> <p><input type="checkbox"/> APP Enforcement</p> </div> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Close"/> </p> <p>Codepage - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.</p> <p>If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.</p>

Window size - It determines the size of TCP protocol (0-65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout-Setting timeout for sessions can make the best utilization of network resources. However, Queue timeout is configured for TCP protocol only; session timeout is configured for the data flow which matched with the firewall rule.

DrayTek Banner - Please uncheck this box and the following screen will not be shown for the unreachable web page. The default setting is Enabled.

Strict Security Checking - All the packets, while transmitting through Vigor router, will be filtered by firewall settings configured by Vigor router. When the resource is inadequate, the packets will be blocked if Strict Security Checking is enabled. If Strict Security Checking is not enabled, then the packets will pass through the router.

3. When you finish the configuration, please click OK to save and exit this page.

V-1-3 Defense Setup

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the DoS Defense setup. The DoS Defense functionality is disabled for default.

V-1-3-1 DoS Defense

Click Firewall and click DoS Defense to open the setup page.

Available settings are explained as follows:

Item	Description
Enable Dos Defense	Check the box to activate the DoS Defense Functionality. Select All - Click this button to select all the items listed below. White/Black List Option - Set white/black list of IPv4/IPv6 address.
Enable SYN flood defense	Check the box to activate the SYN flood defense function. Once detecting the Threshold of the TCP SYN packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent TCP SYN packets for a period defined in Timeout. The goal for this is prevent the TCP SYN packets' attempt to exhaust the limited-resource of Vigor router. By default, the threshold and timeout values are set to 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.

314

Vigor2915 Series User's Guide

<p>Enable UDP flood defense</p>	<p>Check the box to activate the UDP flood defense function. Once detecting the Threshold of the UDP packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent UDP packets for a period defined in Timeout.</p> <p>The default setting for threshold and timeout are 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p>
<p>Enable ICMP flood defense</p>	<p>Check the box to activate the ICMP flood defense function. Similar to the UDP flood defense function, once if the Threshold of ICMP packets from Internet has exceeded the defined value, the router will discard the ICMP echo requests coming from the Internet.</p> <p>The default setting for threshold and timeout are 250 packets per second and 10 seconds, respectively. That means, when 250 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p>
<p>Enable Port Scan detection</p>	<p>Port Scan attacks the Vigor router by sending lots of packets to many ports in an attempt to find ignorant services would respond. Check the box to activate the Port Scan detection. Whenever detecting this malicious exploration behavior by monitoring the port-scanning Threshold rate, the Vigor router will send out a warning.</p> <p>By default, the Vigor router sets the threshold as 2000 packets per second. That means, when 2000 packets per second received, they will be regarded as "attack event".</p>
<p>Block IP options</p>	<p>Check the box to activate the Block IP options function. The Vigor router will ignore any IP packets with IP option field in the datagram header. The reason for limitation is IP option appears to be a vulnerability of the security for the LAN because it will carry significant information, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages...etc. An eavesdropper outside might learn the details of your private networks.</p>
<p>Block Land</p>	<p>Check the box to enforce the Vigor router to defense the Land attacks. The Land attack combines the SYN attack technology with IP spoofing. A Land attack occurs when an attacker sends spoofed SYN packets with the identical source and destination addresses, as well as the port number to victims.</p>
<p>Block Smurf</p>	<p>Check the box to activate the Block Smurf function. The Vigor router will ignore any broadcasting ICMP echo request.</p>
<p>Block trace route</p>	<p>Check the box to enforce the Vigor router not to forward any trace route packets.</p>
<p>Block SYN fragment</p>	<p>Check the box to activate the Block SYN fragment function. The Vigor router will drop any packets having SYN flag and more fragment bit set.</p>
<p>Block Fraggle Attack</p>	<p>Check the box to activate the Block fraggle Attack function. Any broadcast UDP packets received from the Internet is blocked.</p>

	<p>Activating the DoS/DDoS defense functionality might block some legal packets. For example, when you activate the fraggle attack defense, all broadcast UDP packets coming from the Internet are blocked. Therefore, the RIP packets from the Internet might be dropped.</p>
Block TCP flag scan	<p>Check the box to activate the Block TCP flag scan function. Any TCP packet with anomaly flag setting is dropped. Those scanning activities include <i>no flag scan</i>, <i>FIN without ACK scan</i>, <i>SYN FINscan</i>, <i>Xmas scan</i> and <i>full Xmas scan</i>.</p>
Block Tear Drop	<p>Check the box to activate the Block Tear Drop function. Many machines may crash when receiving ICMP datagrams (packets) that exceed the maximum length. To avoid this type of attack, the Vigor router is designed to be capable of discarding any fragmented ICMP packets with a length greater than 1024 octets.</p>
Block Ping of Death	<p>Check the box to activate the Block Ping of Death function. This attack involves the perpetrator sending overlapping packets to the target hosts so that those target hosts will hang once they re-construct the packets. The Vigor routers will block any packets realizing this attacking activity.</p>
Block ICMP Fragment	<p>Check the box to activate the Block ICMP fragment function. Any ICMP packets with more fragment bit set are dropped.</p>
Block Unassigned Numbers	<p>Check the box to activate the Block Unknown Protocol function. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.</p>
Warning Messages	<p>We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.</p> <p>All the warning messages related to DoS Defense will be sent to user and user can review it through Syslog daemon. Look for the keyword DoS in the message, followed by a name to indicate what kind of attacks is detected.</p> <p>System Maintenance >> SysLog / Mail Alert Setup</p> <p>Note: 1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to". 2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.</p>

V-1-3-2 Spoofing Defense

Click the Spoofing Defense tab to open the setup page.

Firewall >> Defense Setup

DoS Defense
Spoofing Defense

ARP Spoofing Defense Log:

- Block ARP replies with inconsistent source MAC addresses.
- Block ARP replies with inconsistent destination MAC addresses.
- Decline VRRP MAC into ARP table.

IP Spoofing Defense

- Block IP packet from WAN with inconsistent source IP addresses.
- Block IP packet from LAN with inconsistent source IP addresses.

Application Notes

A-1 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

The way we can use is to set two rules under **Firewall**. For **Rule 1** of **Set 2** under **Firewall>>Filter Setup** is used as the default setting, we have to create a new rule starting from **Filter Rule 2** of **Set 2**.

1. Access into the web user interface of Vigor router.
2. Open **Firewall>>Filter Setup**. Click the **Set 2** link, choose **Advance Mode** and choose the **Filter Rule 2** button.

Firewall >> Filter Setup

[Set to Factory Default](#)

Set	Comments	Set	Comments
1.	Default Call Filter	7.	
2.	Default Data Filter	8.	
3.		9.	
4.		10.	
5.		11.	
6.		12.	

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 2
Comments: Default Data Filter

Rule	Active	Comments	Direction	Src IP	Dst IP	Service Type	Action	CSM	Move Up	Move Down
1	<input checked="" type="checkbox"/>	xNetBios -> DNS	LAN/DMZ/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to 53	Block Immediately			Down
2	<input type="checkbox"/>		LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down
3	<input type="checkbox"/>		LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down

- Check the box of **Check to enable the Filter Rule**. Enter the comments (e.g., `block_all`). Choose **Block If No Further Match** for the **Filter** setting. Then, click **OK**.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 2 Rule 1

Enable

Comments: xNetBios -> DNS

Schedule Profile
None, None, None, None
 Clear sessions when schedule is ON

Direction: LAN/RT/VPN -> WAN [Advanced]

Source IP/Country: Any [Edit]

Destination IP/Country: Any [Edit]

Service Type: TCP/UDP, Port: from 137~139 to 53 [Edit]

Fragments: Don't Care

Action/Profile: Pass If No Further Match

Application Filter: [None] [Syslog

Branch to Other Filter Set: [None]

Sessions Control: 0 / 50000

MAC Bind IP: Non-Strict

Quality of Service: [None]

User Management: [None]

APP Enforcement: [None]

Info

In default, the router will check the packets starting with Set 2, Filter Rule 2 to Filter Rule 7. If Block If No Further Match for is selected for Filter, the firewall of the router would check the packets with the rules starting from Rule 3 to Rule 7. The packets not matching with the rules will be processed according to Rule 2.

- Next, set another rule. Just open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 3** button.
- Check the box of **Enable**. Enter the comments (e.g., `open_ip`). Click the **Edit** button for **Source IP**.

Filter Set 2 Rule 3

Enable

Comments: open_ip

Schedule Profile: None, None, None, None

Clear sessions when schedule is ON

Direction: LAN/RT/VPN -> WAN [Advanced]

Source IP/Country: Any [Edit]

Destination IP/Country: Any [Edit]

Service Type: Any [Edit]

Fragments: Don't Care

Application Filter: Block Immediately [Syslog]

Branch to Other Filter Set: None

6. A dialog box will be popped up. Choose Range Address as Address Type by using the drop down list. Type 192.168.1.10 in the field of Start IP, and type 192.168.1.20 in the field of End IP. Then, click OK to save the settings. The computers within the range can access into the Internet.

IP Address Edit

Address Type: Range Address

Start IP Address: 192.168.1.10

End IP Address: 192.168.1.20

Subnet Mask: 255.255.255.254 / 31

Invert Selection:

IP Group: None, None

IP Object: None, None

IPv6 Group: None

IPv6 Object: None, None, None

Country Object: None

[OK] [Close]

7. Now, check the content of Source IP is correct or not. The action for Filter shall be set with Pass Immediately. Then, click OK to save the settings.

Filter Set 2 Rule 3

Enable

Comments: open_ip

Schedule Profile: None, None, None, None

Clear sessions when schedule is ON

Direction: LAN/RT/VPN -> WAN [Advanced]

Source IP/Country: 192.168.1.10~192.168.1.20 [Edit]

Destination IP/Country: Any [Edit]

Service Type: Any [Edit]

Fragments: Don't Care

Application Filter: Pass Immediately [Syslog]

Branch to Other Filter Set: None

- Both filter rules have been created. Click **OK**.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 2
 Comments :

Rule	Enable	Comments	Direction	Src IP	Dst IP	Service Type	Action	CSM	Move Up	Move Down
1	<input checked="" type="checkbox"/>	xNetBios -> DNS	LAN/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to 53	Pass If No Further Match			Down
2	<input checked="" type="checkbox"/>	block_all	LAN/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down
3	<input checked="" type="checkbox"/>	open_ip	LAN/RT/VPN -> WAN	192.168.1.10 ~ 192.168.1.20	Any	Any	Pass Immediately		UP	Down

Now, all the settings are configured well. Only the computers with the IP addresses within 192.168.1.10 ~ 192.168.1.20 can access to Internet.

V-2 Central Security Management (CSM)

CSM is an abbreviation of **Central Security Management** which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

APP Enforcement Filter

As the popularity of all kinds of instant messenger application arises, communication cannot become much easier. Nevertheless, while some industry may leverage this as a great tool to connect with their customers, some industry may take reserved attitude in order to reduce employee misuse during office hour or prevent unknown security leak. It is similar situation for corporation towards peer-to-peer applications since file-sharing can be convenient but insecure at the same time. To address these needs, we provide CSM functionality.

URL Content Filter

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

Web Content Filter

We all know that the content on the Internet just like other types of media may be inappropriate sometimes. As a responsible parent or employer, you should protect those in your trust against the hazards. With Web filtering service of the Vigor router, you can protect your business from common primary threats, such as productivity, legal liability, network and security threats. For parents, you can protect your children from viewing adult websites or chat rooms.

Once you have activated your Web Filtering service in Vigor router and chosen the categories of website you wish to restrict, each URL address requested (e.g. www.bbc.co.uk) will be checked against our server database. This database is updated as frequent as daily by a global team of Internet researchers. The server will look up the URL and return a category to your router. Your Vigor router will then decide whether to allow access to this site according to the categories you have selected. Please note that this action will not introduce any delay in your Web surfing because each of multiple load balanced database servers can handle millions of requests for categorization.

Info

The priority of URL Content Filter is higher than Web Content Filter.

<input type="button" value="Select All"/>			

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for the CSM profile. The maximum length of the name you can set is 15 characters.
Select All	Click it to choose all of the items in this page.
Clear All	Uncheck all the selected boxes.
Enable	Check the box to select the APP to be blocked by Vigor router.

The profiles configured here can be applied in the Firewall>>General Setup and Firewall>>Filter Setup pages as the standard for the host(s) to follow.

V-2-2 URL Content Filter Profile

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

For example, if you add key words such as "sex", Vigor router will limit web access to web sites or web pages such as "www.sex.com", "www.backdoor.net/images/sex/p_386.html". Or you may simply specify the full or partial URL such as "www.sex.com" or "sex.com".

Also the Vigor router will discard any request that tries to retrieve the malicious code.

Click CSM and click **URL Content Filter Profile** to open the profile setting page.

CSM >> URL Content Filter Profile

```
<body><center><br><p>The requested Web page has been blocked by URL Content Filter.<p>Please contact your system administrator for further information.</center></body>
```

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profiles.
Profile	Display the number of the profile which allows you to click to set different policy.
Name	Display the name of the URL Content Filter Profile.

Administration Message	You can Enter the message manually for your necessity. Default Message - You can Enter the message manually for your necessity or click this button to get the default message which will be displayed on the field of Administration Message .
-------------------------------	--

You can set eight profiles as URL content filter. Simply click the index number under Profile to open the following web page.

CSM >> URL Content Filter Profile

Profile Index: 1

Profile Name:

Priority: Log:

URL Access Control

Enable URL Access Control Prevent web access from IP address

Action:

Exception List

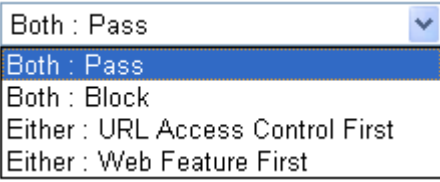

Web Feature

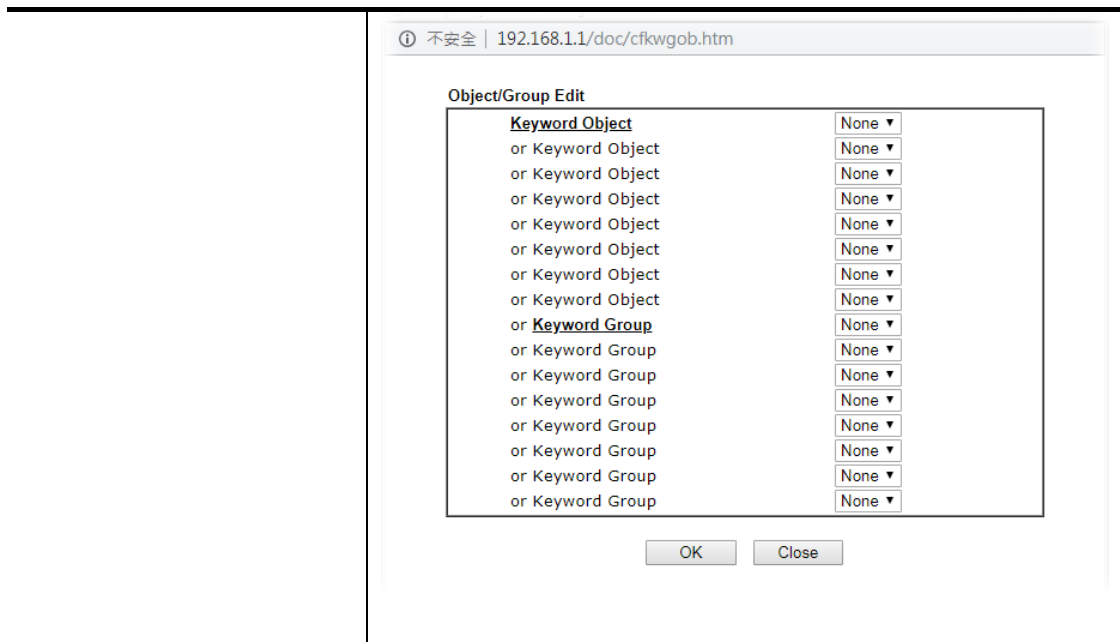

Enable Web Feature Restriction

Action: **File Extension Profile:** Cookie Proxy Upload

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for the CSM profile. The maximum length of the name you can set is 15 characters.
Priority	<p>It determines the action that this router will apply.</p> <p>Both: Pass - The router will let all the packages that match with the conditions specified in URL Access Control and Web Feature below passing through. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Both:Block -The router will block all the packages that match with the conditions specified in URL Access Control and Web Feature below. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Either: URL Access Control First - When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for URL first, then Web feature second.</p> <p>Either: Web Feature First -When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for web feature</p>

	<p>first, then URL second.</p> 
Log	<p>Pass - Only the log about Pass will be recorded in Syslog. Block - Only the log about Block will be recorded in Syslog. All - All the actions (Pass and Block) will be recorded in Syslog.</p>
URL Access Control	<p>Enable URL Access Control - Check the box to activate URL Access Control. Note that the priority for URL Access Control is higher than Restrict Web Feature. If the web content match the setting set in URL Access Control, the router will execute the action specified in this field and ignore the action specified under Restrict Web Feature.</p> <p>Prevent web access from IP address - Check the box to deny any web surfing activity using IP address, such as http://202.6.3.2. The reason for this is to prevent someone dodges the URL Access Control. You must clear your browser cache first so that the URL content filtering facility operates properly on a web page that you visited before.</p> <p>Action - This setting is available only when Either : URL Access Control First or Either : Web Feature First is selected.</p> <ul style="list-style-type: none"> ● Pass - Allow accessing into the corresponding webpage with the keywords listed on the box below. ● Block - Restrict accessing into the corresponding webpage with the keywords listed on the box below. If the web pages do not match with the keyword set here, it will be processed with reverse action. <p>Exception List - Specify the object profile(s) as the exception list which will be processed in an opposite manner to the action selected above.</p> <p>Group/Object Selections - The Vigor router provides several frames for users to define keywords and each frame supports multiple keywords. The keyword could be a noun, a partial noun, or a complete URL string. Multiple keywords within a frame are separated by space, comma, or semicolon. In addition, the maximal length of each frame is 32-character long. After specifying keywords, the Vigor router will decline the connection request to the website whose URL string matched to any user-defined keyword. It should be noticed that the more simplified the blocking keyword list is, the more efficiently the Vigor router performs.</p>

Web Feature

Enable Web Feature Restriction - Check this box to make the keyword being blocked or passed.

Action - This setting is available only when **Either: URL Access Control First** or **Either: Web Feature First** is selected.

- **Pass** - Allow accessing into the corresponding webpage with the keywords listed on the box below.
- **Block** - Restrict accessing into the corresponding webpage with the keywords listed on the box below. If the web pages do not match with the specified feature set here, it will be processed with reverse action.

File Extension Profile - Choose one of the profiles that you configured in **Object Setting>> File Extension Objects** previously for passing or blocking the file downloading.

Cookie - Check the box to filter out the cookie transmission from inside to outside world to protect the local user's privacy.

Proxy - Check the box to reject any proxy transmission. To control efficiently the limited-bandwidth usage, it will be of great value to provide the blocking mechanism that filters out the multimedia files downloading from web pages.

Upload - Check the box to block the file upload by way of web page.

After finishing all the settings, please click **OK** to save the configuration.

V-2-3 Web Content Filter Profile

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

Service Activation Wizard allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>.

However, if you use the **Web Content Filter Profile** page to activate WCF feature, it is necessary for you to access into the server (**MyVigor**) located on <http://myvigor.draytek.com>. Therefore, you need to register an account on <http://myvigor.draytek.com> for using corresponding service. Please refer to section of creating MyVigor account.

WCF adopts the mechanism developed and offered by certain service provider (e.g., DrayTek). No matter activating WCF feature or getting a new license for web content filter, you have to click **Activate** to satisfy your request. Be aware that service provider matching with Vigor router currently offers a period of time for trial version for users to experiment. If you want to purchase a formal edition, simply contact with the channel partner or your dealer.

Click **CSM** and click **Web Content Filter Profile** to open the profile setting page. The default setting for Setup Query Server /Setup Test Server is **auto-selected**. You can choose another server for your necessity by clicking **Find more** to open <http://myvigor.draytek.com> for searching another qualified and suitable one.

Info 1

Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by Commtouch. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

Info 2

Commtouch is merged by Cyren, and GlobalView services will be continued to deliver powerful cloud-based information security solutions! Refer to: <http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html>

After finishing all the settings, please click **OK** to save the configuration.

V-2-4 DNS Filter Profile

The DNS Filter monitors DNS queries on UDP port 53 and will pass the DNS query information to the WCF to help with categorizing HTTPS URL's.

DNS can be specified in LAN>>General Setup by using the server (e.g., 168.95.1.1) on router or external DNS server (e.g., 8.8.8.8). If the router server is used, DNS Filter General Setting will be applied to DNS query from clients on LAN. However, if the external DNS server is used, DNS Filter Profile will be applied to DNS query coming from clients on LAN.

Info

For DNS filter must use the WCF service profile to filter the packets, therefore WCF license must be activated first. Otherwise, DNS filter does not have any effect on packets.

Available settings are explained as follows:

Item	Description
DNS Filter Profile Table	<p>It displays a list of different DNS filter profiles (with specified WCF and UCF).</p> <p>Click the profile link to open the following page. Then, Enter the name of the profile and specify Web Content Filter/URL Content Filter based on your requirement.</p> <p>C SM >> DNS Filter</p> <hr/> <p>Index No. 1</p> <div data-bbox="711 495 1417 636" style="border: 1px solid black; padding: 5px;"> <p>Profile Name <input type="text"/></p> <p><u>Web Content Filter</u> <input type="text" value="None"/></p> <p><u>URL Content Filter</u> <input type="text" value="None"/></p> <p>Syslog <input type="text" value="Block Only"/></p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Clear"/> <input type="button" value="Cancel"/> </p> </div>

After finishing all the settings, please click **OK** to save the configuration.

Application Notes

A-1 How to Create an Account for MyVigor

The website of MyVigor (a server located on <http://myvigor.draytek.com>) provides several useful services (such as Anti-Spam, Web Content Filter, Anti-Intrusion, and etc.) to filtering the web pages for the sake of protecting your system.

To access into MyVigor for getting more information, please create an account for MyVigor.

Create an Account via Vigor Router

1. Click CSM>> Web Content Filter Profile. The following page will appear.

Link : [Activate my Account](#)

10. Click the **Activate my Account** link to enable the account that you created. The following screen will be shown to verify the register process is finished. Please click **Login**.

11. When you see the following page, please type in the account and password (that you just created) in the fields of **UserName** and **Password**.

12. Now, click **Login**. Your account has been activated. You can access into MyVigor server to activate the service (e.g., WCF) that you want.

A-2 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.

Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

URL Content Filter,

Benefits: Free, flexible for customize webpage.

Note: Manual setting (e.g., one keyword for one website.)

I. Via Web Content Filter

1. Make sure the Web Content Filter (powered by Commtouch) license is valid.

CSM >> Web Content Filter Profile

Web-Filter License

Filter.<p>Please contact your system administrator for further
information.</center></body>
```

- Open CSM >> Web Content Filter Profile to create a WCF profile. Check Social Networking with Action, Block.

- Enable this profile in Firewall >> General Setup >> Default Rule.

Firewall >> General Setup

General Setup

- Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page
 from 192.168.2.114
 to www.facebook.com/
 that is categorized with [Social Networking]
 has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

II. Via URL Content Filter

A. Block the web page containing the word of “Facebook”

- Open Object Settings>>Keyword Object. Click an index number to open the setting page.
- In the field of Contents, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 1

Name	<input type="text" value="Facebook"/>
Contents	<input type="text" value="facebook"/>

Limit of Contents: Max 3 Words and 63 Characters.
 Each word should be separated by a single space.

You can replace a character with %HEX.
 Example:
 Contents: backdoo%72 virus keep%20out

Result:

- backdoor
- virus
- keep out

- Open CSM>>URL Content Filter Profile. Click an index number to open the setting page.
- Configure the settings as the following figure.

Profile Index: 1

Profile Name:

Priority: Log:

1.URL Access Control

Enable URL Access Control Prevent web access from IP address

Action: Group/Object Selections:

2.Web Feature

Enable Restrict Web Feature

Action: Cookie Proxy Upload File Extension Profile:

5. When you finished the above steps, click OK. Then, open Firewall>>General Setup.
6. Click the Default Rule tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word "facebook" inside.

General Setup

Actions for default rule:	Action/Profile	Syslog
Application		
Filter	<input type="text" value="Pass"/>	<input type="checkbox"/>
Sessions Control	<input type="text" value="0 / 60000"/>	<input type="checkbox"/>

Load-Balance policy	<input type="text" value="Auto-Select"/>	<input type="checkbox"/>
User Management	<input type="text" value="None"/>	<input type="checkbox"/>
APP Enforcement	<input type="text" value="None"/>	<input type="checkbox"/>
URL Content Filter	<input type="text" value="1-Facebook"/>	<input type="checkbox"/>
Web Content Filter	<input type="text" value="None"/>	<input type="checkbox"/>

Advance Setting

B. Disallow users to play games on Facebook

1. Open Object Settings>>Keyword Object. Click an index number to open the setting page.
2. In the field of Contents, please type *apps.facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 2

Name	facebook-apps
Contents	apps facebook

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

OK Clear Cancel

3. Open CSM>>URL Content Filter Profile. Click an index number to open the setting page.
4. Configure the settings as the following figure.

CSM >> URL Content Filter Profile

Profile Index: 2

Profile Name:	face.apps		
Priority:	Either : URL Access Control First	Log:	None
1.URL Access Control			
<input checked="" type="checkbox"/> Enable URL Access Control		<input type="checkbox"/> Prevent web access from IP address	
Action:		Group/Object Selections	
Block		facebook..	
2.Web Feature			
<input type="checkbox"/> Enable Restrict Web Feature			
Action:			
Pass		<input type="checkbox"/> Cookie	<input type="checkbox"/> Proxy
		<input type="checkbox"/> Upload	File Extension Profile: None

OK Clear Cancel

5. When you finished the above steps, please open Firewall>>General Setup.
6. Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word "facebook" inside.

General Setup

General Setup	Default Rule	
Actions for default rule:		
Application	Action/Profile	Syslog
Filter	Pass	<input type="checkbox"/>

Part VI Management

System
Maintenance

Bandwidth
Management

User
Management

There are several items offered for the Vigor router system setup: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Panel Control, Self-Signed Certificate, Reboot System, Firmware Upgrade, Activation and Dashboard Control.

It is used to control the bandwidth of data transmission through configuration of Sessions Limit, Bandwidth Limit, Quality of Service (QoS) and APP QoS.

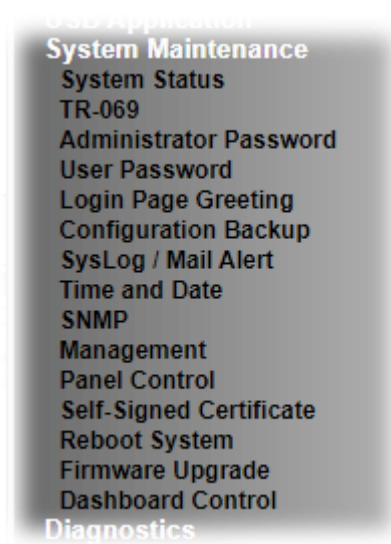

It is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password.

VI-1 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade and Activation.

Web User Interface

Below shows the menu items for System Maintenance.

VI-1-1 System Status

The System Status provides basic network settings of Vigor router. It includes LAN and WAN interface information. Also, you could get the current running firmware version or firmware related information from this presentation.

System Status

Model Name : Vigor2915ac
 Firmware Version : 4.0.5
 Build Date/Time : Nov 21 2019 17:39:01

LAN					
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	00-1D-AA-95-B6-E0	192.168.1.1	255.255.255.0	Yes	8.8.8.8
LAN2	00-1D-AA-95-B6-E0	192.168.2.1	255.255.255.0	Yes	8.8.8.8
LAN3	00-1D-AA-95-B6-E0	192.168.3.1	255.255.255.0	Yes	8.8.8.8
LAN4	00-1D-AA-95-B6-E0	192.168.4.1	255.255.255.0	Yes	8.8.8.8
IP Routed Subnet	00-1D-AA-95-B6-E0	192.168.0.1	255.255.255.0	Yes	8.8.8.8

Wireless LAN(2.4GHz)			
MAC Address	Frequency Domain	Firmware Version	SSID
02-1D-AA-C5-B6-E0	Europe	4.4.2.1	DrayTek

Wireless LAN(5GHz)			
MAC Address	Frequency Domain	Firmware Version	SSID
00-1D-AA-95-B6-E0	Europe	4.4.2.1	DrayTek_5G

WAN					
	Link Status	MAC Address	Connection	IP Address	Default Gateway
WAN1	Disconnected	00-1D-AA-95-B6-E1	DHCP Client	---	---
WAN2	Disconnected	00-1D-AA-95-B6-E2	DHCP Client	---	---

IPv6			
	Address	Scope	Internet Access Mode
LAN	FE80::21D:AAFF:FE95:B6E0/64	Link	---

User Mode is **OFF** now.

Available settings are explained as follows:

Item	Description
Model Name	Display the model name of the router.
Firmware Version	Display the firmware version of the router.
Build Date/Time	Display the date and time of the current firmware build.
LAN	<p>MAC Address</p> <ul style="list-style-type: none"> - Display the MAC address of the LAN Interface. <p>IP Address</p> <ul style="list-style-type: none"> - Display the IP address of the LAN interface. <p>Subnet Mask</p> <ul style="list-style-type: none"> - Display the subnet mask address of the LAN interface. <p>DHCP Server</p> <ul style="list-style-type: none"> - Display the current status of DHCP server of the LAN interface <p>DNS</p> <ul style="list-style-type: none"> - Display the assigned IP address of the primary DNS.
WAN	<p>Link Status</p> <ul style="list-style-type: none"> - Display current connection status.

	<p>MAC Address - Display the MAC address of the WAN Interface.</p> <p>Connection - Display the connection type.</p> <p>IP Address - Display the IP address of the WAN interface.</p> <p>Default Gateway - Display the assigned IP address of the default gateway.</p>
IPv6	<p>Address - Display the IPv6 address for LAN.</p> <p>Scope - Display the scope of IPv6 address. For example, IPv6 Link Local could only be used for direct IPv6 link. It can't be used for IPv6 internet.</p> <p>Internet Access Mode - Display the connection mode chosen for accessing into Internet.</p>

VI-1-2 TR-069

This device supports TR-069 standard. It is very convenient for an administrator to manage a TR-069 device through an Auto Configuration Server, e.g., VigorACS.

VI-1-2-1 ACS and CPE Settings

System Maintenance >> TR-069 Setting

ACS and CPE Settings	Reporting Configuration	Export Parameters
<p>TR-069 <input checked="" type="radio"/> Disable <input type="radio"/> Enable</p> <p>ACS Server On <input type="text" value="Internet"/></p>		
<p>ACS Server</p> <p>URL <input type="text"/> <input type="button" value="Wizard"/></p> <p><input type="checkbox"/> Acquire URL from DHCP option 43</p> <p>Username <input type="text" value="Max: 31 characters"/></p> <p>Password <input type="text" value="Max: 31 characters"/></p> <p><input type="button" value="Test With Inform"/> Event Code <input type="text" value="PERIODIC"/></p> <p>Last Inform Response Time :(NA) ●</p>		
<p>CPE Client</p> <p>Protocol <input checked="" type="radio"/> HTTP <input type="radio"/> HTTPS</p> <p>URL <input type="text"/></p> <p>Port <input type="text" value="8069"/></p> <p>Username <input type="text" value="vigor"/></p> <p>Password <input type="text" value="*****"/></p> <p>Note: Please enable TR-069 server to allow access from Internet on System Maintenance >> Management page.</p>		
<p>Periodic Inform Settings</p> <p><input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p>Time Interval <input type="text" value="900"/> second(s)</p>		
<p>STUN Settings</p> <p><input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p>Server Address <input type="text"/></p> <p>Server STUN Port <input type="text" value="3478"/></p> <p>Minimum Keep Alive Period <input type="text" value="60"/> second(s)</p> <p>Maximum Keep Alive Period <input type="text" value="-1"/> second(s)</p>

<input type="button" value="OK"/> <input type="button" value="Clear"/>		

Available settings are explained as follows:

Item	Description
TR-069	Click Enable to activate the settings on this page.
ACS Server On	Choose the interface for the router connecting to ACS server.
ACS Server	<p>URL - Such data must be typed according to the ACS (Auto Configuration Server) you want to link.</p> <ul style="list-style-type: none"> ● Wizard - Click it to enter the IP address of VigorACS server, port number and the handler. ● Acquire URL form DHCP option 43 - Check the box to

	<p>get the URL from DHCP option 43.</p> <p>Username/Password - Such data must be typed according to the ACS (Auto Configuration Server) you want to link.</p> <ul style="list-style-type: none"> ● Test With Inform - Click it to send a message based on the event code selection to test if such CPE is able to communicate with VigorACS SI server. ● Event Code - Use the drop down menu to specify an event to perform the test. <p>Last Inform Response Time - Display the time that VigorACS server made a response while receiving Inform message from CPE last time.</p>
CPE Client	<p>Such information is useful for Auto Configuration Server.</p> <p>Port - Sometimes, port conflict might be occurred. To solve such problem, you might change port number for CPE.</p> <p>Username and Password - Enter the username and password that VigorACS can use to access into such CPE.</p>
Periodic Inform Settings	<p>Enable - It is the default setting.</p> <ul style="list-style-type: none"> ● Time Interval - Please set interval time or schedule time for the router to send notification to CPE. <p>Disable - Click it to close the mechanism of notification.</p>
STUN Settings	<p>Disable - The default is Disable.</p> <p>Enable - Please Enter the relational settings listed below:</p> <ul style="list-style-type: none"> ● Server Address - Enter the IP address of the STUN server. ● Server Port - Enter the port number of the STUN server. ● Minimum Keep Alive Period - If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the minimum period. The default setting is "60 seconds". ● Maximum Keep Alive Period - If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the maximum period. A value of "-1" indicates that no maximum period is specified.
Apply Settings to APs	<p>This feature is able to apply TR-069 settings (including STUN and ACS server settings) to all of APs managed by Vigor2862 at the same time.</p> <p>Disable - Related settings will not be applied to VigorAP.</p> <p>Enable - Above STUN settings will be applied to VigorAP after clicking OK. If such feature is enabled, you have to Enter the password for accessing VigorAP.</p> <ul style="list-style-type: none"> ● AP Password - Enter the password of the VigorAP that you want to apply Vigor2915's TR-069 settings. <p>Specify STUN Settings to APs - If you want to apply specific STUN settings (not the STUN Settings configured for Vigor2915) to VigorAPs to meet specific requirements, simply check this box. Then, enter the server IP address, server port, minimum keep alive period and maximum keep alive period respectively.</p>

After finishing all the settings here, please click **OK** to save the configuration.

VI-1-2-2 Reporting Configuration

Information related to the router's health are divided into several categories and listed in this field. After checking the item(s), Vigor router will arrange and send corresponding data to VigorACS as a reference for the system administrator.

System Maintenance >> TR-069 Setting

ACS and CPE Settings	Reporting Configuration	Export Parameters
Health Parameters		
<input type="checkbox"/> CPU Usage	<input type="checkbox"/> IP/Subnet Conflict	
<input type="checkbox"/> Memory Usage	<input type="checkbox"/> WLAN 2.4GHz Tx Lost	
<input type="checkbox"/> WAN Bandwidth Usage	<input type="checkbox"/> WLAN 5GHz Tx Lost	
<input type="checkbox"/> WAN Ping to Keep Alive Status	<input type="checkbox"/> DDoS Status	
<input type="checkbox"/> ARP Table Status	<input type="checkbox"/> VPN Connection Status	
<input type="checkbox"/> Routing Table Status	<input type="checkbox"/> Session Usage	
<input type="checkbox"/> Login Attempts

Administrator LDAP Setting

<input type="checkbox"/> Enable LDAP/AD login for admin users
LDAP Server Profiles Setup

Note:

If Local User is enabled, you will need to select 'admin' group when log into Web UI.

Available settings are explained as follows:

Item	Description
Administrator Password	<p>The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements.</p> <p>Old Password - Type in the old password. The factory default setting for password is "admin".</p> <p>New Password - Define the basic password. The length of the password is limited to 23 characters.</p> <p>Confirm Password - Enter the basic password again for confirmation.</p> <p>Enable 'admin' account login to Web UI from the Internet - It is configurable only when Administrator Local User is enabled. The default setting is enabled. It can ensure that any user is able to successfully accesses into web user interface of Vigor router through Internet by username/password of "admin/admin". However, if you want to prevent the admin account from password attacks by hackers, disable this function and let local user account access into the WUI instead.</p> <p>Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. In general, the above basic password setting will be used for authentication if such option is disabled. Simply check the box to enable the following settings.</p> <ul style="list-style-type: none"> ● Mobile one-Time Password (mOTP) - Click it to use mOTP as the advanced authentication method. Enter the PIN code and secret settings for one-time usage. ● 2-Step Auth code via SMS Profile and/or Mail Profile - Click it to use authentication code as the advanced authentication method. The authentication code will be sent out based on the selected SMS profile and Mail profile.
Administrator Local User	<p>Usually, the system administrator has the highest privilege to modify the settings on the web user interface of the Vigor router. However, in some cases, it might be necessary to have other users in LAN to access into the web user interface of Vigor router.</p> <p>This feature is used to define other users in LAN who can access into the web user interface with the same privilege as the administrator.</p> <p>Enable Local User - Check the box to enable Administrator Local User setting and define the local user account and password.</p> <ul style="list-style-type: none"> ● Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. In general, the above basic password setting will be used for authentication if such option is disabled. Simply check the box to enable the following settings. ● Local User List - Display the username, authentication method of the local user. ● Specific User - Create the new user account as the local user. Then specify the authentication method (dividing into Basic and Advanced) for the user

	<p>account.</p> <ul style="list-style-type: none"> ➤ User Name - Enter a user name. ➤ Authentication method (Basic) - Vigor router will authenticate the specific user via the local password. Local Password - Enter the password for the local user. ➤ Authentication method (Advanced) - Vigor router will authenticate the specific user via the mOTP or 2-Step Auth code. Mobile one-Time Password (mOTP) - Click it to use mOTP as the advanced authentication method. Enter the PIN code and secret settings for one-time usage. 2-Step Authentication via <u>SMS Profile</u> and/or <u>Mail Profile</u> - Click it to use authentication code as the advanced authentication method. The authentication code will be sent out based on the selected SMS profile and Mail profile. ● Add - After typing the user name and password above, simply click it to create a new local user. The new one will be shown on the Local User List immediately. ● Edit - If the username listed on the box above is not satisfied, simply click the username and modify it on the field of User Name. Later, click Edit to update the information. ● Delete - If the local user listed on the box above is not satisfied, simply click the username and click Delete to remove it.
<p>Administrator LDAP Setting</p>	<p>Enable LDAP/AD login for admin users - If it is enabled, any user can access into the web user interface of Vigor router through the LDAP server authentication.</p> <p>Available profiles will be displayed here under the link of LDAP Profile Setup. To create a new profile, simply click the link of <u>LDAP Profiles Setup</u>.</p>

After finishing all the settings here, please click **OK** to save the configuration. After logging out the webuser interface, please use the new password to access into the web user interface again.

VI-1-4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="text" value="Max: 23 characters"/>
Confirm Password	<input type="text" value="Max: 23 characters"/>
Password Strength:	<input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/>
Strong password requirements:	
1. Have at least one upper-case letter and one lower-case letter.	
2. Including non-alphanumeric characters is a plus.	

Note:

1. Password can contain a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()
2. Password can't be all asterisks(*). For example, '*' or '***' is illegal, but '123*' or '*45' is OK.

Available settings are explained as follows:

Item	Description
Enable User Mode for simple web configuration	After checking this box, you can access into the web user interface with the password typed here for simple web configuration. The settings on simple web user interface will be different with full web user interface accessed by using the administrator password.
Password	Type in new password in this field. The length of the password is limited to 31 characters.
Confirm Password	Type in the new password again.
Password Strength	Display the security strength of the password specified above.
Set to Factory Default	Click to return to the factory default setting.

When you click OK, the login window will appear. Please use the new password to access into the web user interface again. Below shows an example for accessing into User Operation with User Password.

1. Open System Maintenance>>User Password.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Type a new password in the field of New Password and click OK.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="password" value="*****"/> (Max. 23 characters allowed)
Confirm Password	<input type="password" value="*****"/> (Max. 23 characters allowed)
Password Strength:	<input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/>
Strong password requirements:	
1. Have at least one upper-case letter and one lower-case letter.	
2. Including non-alphanumeric characters is a plus.	

3. The following screen will appear. Simply click OK.

System Maintenance >> User Password

Active Configuration

Password : *****

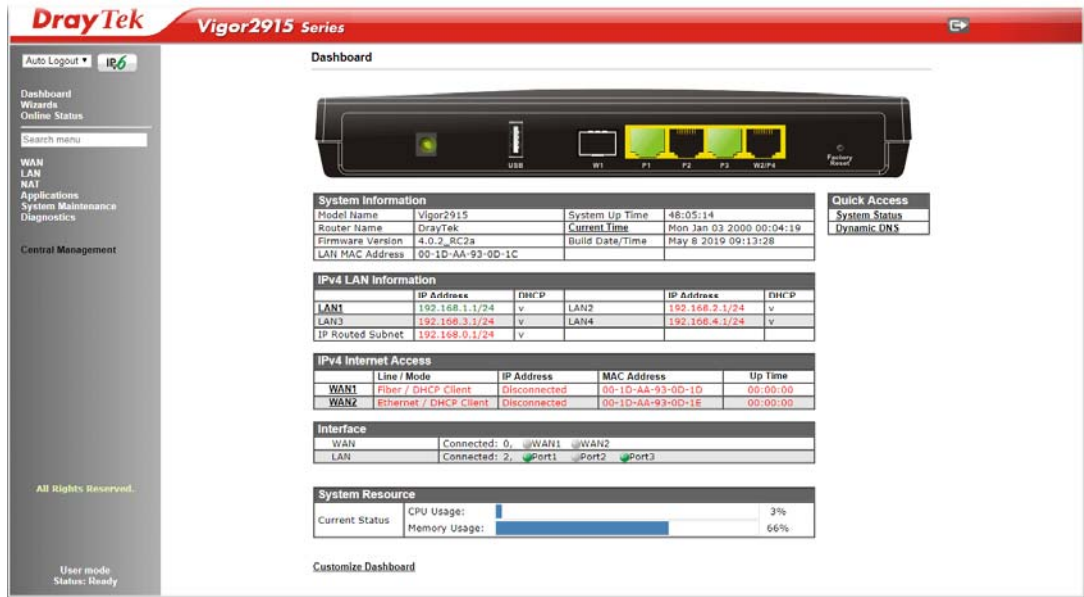

4. Log out Vigor router web user interface by clicking the Logout button.

5. The following window will be open to ask for username and password. Enter the new user password in the field of Password and click Login.

The login window features the DrayTek logo and "Vigor2915 Series" in a red header. Below is a "Login" section with a "Username" field and a "Password" field (masked with dots). A "Login" button is positioned below the fields. A "Security Warning" message states: "You are logging in without encryption which is not recommended. To login securely [click here](#)." At the bottom, it says "Copyright © 2000-2019 DrayTek Corp. All Rights Reserved."

6. The main screen with User Mode will be shown as follows.

Settings to be configured in User Mode will be less than settings in Admin Mode. Only basic configuration settings will be available in User Mode.

Info

Setting in User Mode can be configured as same as in Admin Mode.

VI-1-5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

System Maintenance >> Login Page Greeting

Login Page Greeting

Enable

Login Page Title (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:
<h1>Welcome Message</h1>
<p>Message</p>

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable the login customization function.
Login Page Title	Type a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
Welcome Message and Bulletin	Type words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not type URL redirect link here.
Preview	Click it to display the preview of the login window based on the settings on this web page.
Set to Factory Default	Click to return to the factory default setting.

Below shows an example of login customization with the information typed in Login Description and Bulletin.

Login

Login

Security Warning: You are logging in without encryption which is not recommended. To login securely [click here](#).

Copyright © 2000-2019 DrayTek Corp. All Rights Reserved.

Welcome Message

This welcome message is displayed in the Login page of the router. Replace this text with your own message.

1. The welcome message can be written in HTML so lists such as this one can be created
2. Other markup tags such as p, font or img can be used

VI-1-6 Configuration Backup

Such function can be used to apply the router settings configured by Vigor2925 to Vigor2915.

Backup the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following page will be popped-up, as shown below.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restore

Restore settings from a configuration file.

選擇檔案 | 未選擇任何檔案
 USB Storage 
 Restore configuration except the login password.

Note:
This will work only if the selected configuration file was created from this device.

Backup

Back up the current settings into a configuration file.

Protect with password

Note:
The router's certificates are not part of the configuration file. Please use [Certificate Management >> Certificate Backup](#) for backup.

Auto Backup to USB storage

Enable

Backup folder 

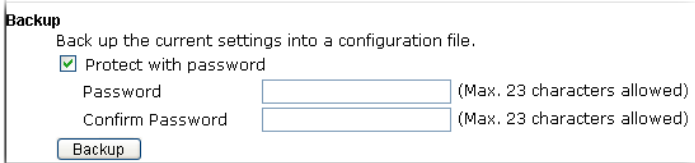

Periodic backup
 Cycle duration: days and hours
 Backup after change configuration

Note:

1. When loading a configuration file from a model in the Supported Model List please note that features and functionality can vary between models so please manually verify the settings after the restoration.
2. Auto backup to USB: if settings do not change, configuration doesn't backup.
3. Auto backup to USB: if configuration backup multiple times in one hour, the old file will be overwritten with the same filename.

Available settings are explained as follows:

Item	Description
Restore	<p>Restore settings from a configuration file - Click the Select File button to specify a file to be restored or click USB Storage (if a USB storage disk connected) to choose the configuration file.</p> <p>Restore configuration except the login password - Check the box to restore the configuration file except the login password.</p> <p>Restore - Click Restore to restore the configuration. If the file is encrypted, the system will ask you to Enter the password to decrypt the configuration file.</p>

<p>Backup</p>	<p>Click it to perform the configuration backup of this router.</p> <p>Protect with password- For the sake of security, the configuration file for the router can be encrypted.</p>  <p><small>Note: When loading a configuration file from a model in the Supported Model List please:</small></p> <ul style="list-style-type: none"> ● Password - Type several characters as the password for encrypting the configuration file. ● Confirm Password - Enter the password again for confirmation.
<p>Auto Backup to USB storage</p>	<p>The configuration can be stored to a USB connecting to Vigor router as a backup.</p> <p>Backup folder - Set the path for downloading.</p> <p>Periodicity backup - Set the circle duration for backup.</p> <p>Backup after change configuration - Backup will be executed whenever the configuration is changed.</p>
<p>Support Model List</p>	<p>Web configuration file from <i>other</i> Vigor router can be applied to Vigor2915 series. At present, only the configuration file of Vigor2912 is accepted for Vigor2915.</p> <p>This field displays model name(s) and firmware which web configuration file saved can be used by such router.</p>

2. Click **Backup** button to get into the following dialog. Click **Save** button to open another dialog for saving configuration as a file.

3. In **Save As** dialog, the default filename is **config.cfg**. You could give it another name by yourself.

4. Click **Save** button, the configuration will download automatically to your computer as a file named **config.cfg**.

The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

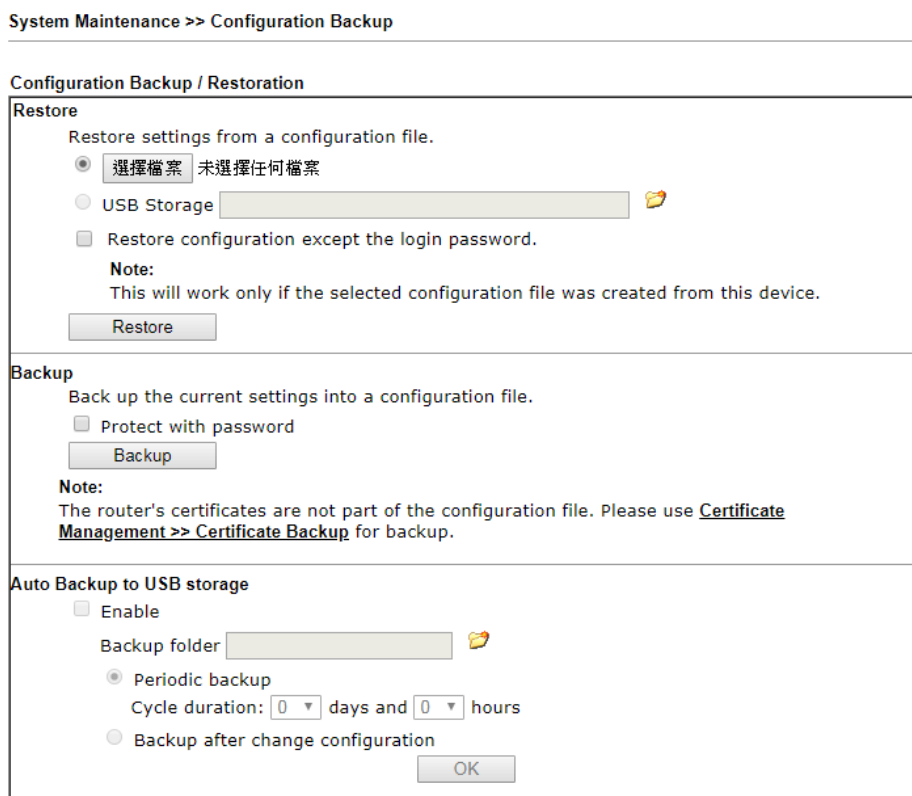

Info

Backup for Certification must be done independently. The Configuration Backup does not include information of Certificate.

Restore Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

2. Click **Choose File** button to choose the correct configuration file for uploading to the router.
3. Click **Restore** button and wait for few seconds.

VI-1-7 Syslog/Mail Alert

SysLog function is provided for users to monitor router.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup

<p>SysLog Access Setup</p> <p><input type="checkbox"/> Enable</p> <p>Syslog Save to:</p> <p><input checked="" type="checkbox"/> Syslog Server</p> <p><input type="checkbox"/> USB Disk</p> <p>Maximum Syslog folder space: <input type="text" value="1"/> GB</p> <p>When Syslog folder is full: <input type="text" value="Overwrite oldest logs"/></p> <p>Router Name <input type="text" value="DrayTek"/></p> <p>Server IP/Hostname <input type="text"/></p> <p>Destination Port <input type="text" value="514"/></p> <p>Mail Syslog <input type="checkbox"/> Enable</p> <p>Enable syslog message:</p> <p><input checked="" type="checkbox"/> Firewall Log</p> <p><input checked="" type="checkbox"/> VPN Log</p> <p><input checked="" type="checkbox"/> User Access Log / Hotspot User Information</p> <p><input checked="" type="checkbox"/> WAN Log</p> <p><input checked="" type="checkbox"/> Router/DSL information</p>	<p>Mail Alert Setup</p> <p><input type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/></p> <p>SMTP Server <input type="text"/></p> <p>SMTP Port <input type="text" value="25"/></p> <p>Mail To <input type="text"/></p> <p>Return-Path <input type="text"/></p> <p><input type="checkbox"/> Use SSL</p> <p><input type="checkbox"/> Authentication</p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p>Enable E-Mail Alert:</p> <p><input checked="" type="checkbox"/> DoS Attack</p> <p><input checked="" type="checkbox"/> APPE</p> <p><input checked="" type="checkbox"/> VPN LOG</p> <p><input type="checkbox"/> Debug Log</p>
---	--

Note:

1. USB Syslog space is available from 256-1024 MB or 1-16 GB.
2. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
3. Mail Syslog feature will send the Syslog when it is full.
4. We only support secured SMTP connection on port 465.

Available settings are explained as follows:

Item	Description
SysLog Access Setup	<p>Enable - Select to enable the Syslog function.</p> <p>Syslog Save to - Check Syslog Server and / or USB Disk.</p> <ul style="list-style-type: none"> ● Syslog Server - Events will be sent to a Syslog server. ● USB Disk - Events will be saved to a USB storage device connected to the router. ● Maximum Syslog folder space - Set a space (unit GB/MB) to store event logs. ● When Syslog folder is full - Specify the action (overwrite the oldest logs or stop logging) to be executed.
Router Name	<p>Display the name for such router configured in System Maintenance>>Management.</p> <p>If there is no name here, simply lick the link to access into System Maintenance>>Management to set the router name.</p> <p>Server IP Address / Hostname -The IP address of the Syslog server.</p> <p>Destination Port - Assign a port for the Syslog protocol.</p> <p>Mail Syslog - Check the box to recode the mail event on</p>

	<p>Syslog.</p> <p>Enable syslog message - Check the box listed on this web page to send the corresponding message of firewall, VPN, User Access, Call, WAN, Router/DSL information to Syslog.</p>
<p>Mail Alert Setup</p>	<p>Check Enable to activate function of mail alert.</p> <p>Send a test e-mail - Make a simple test for the e-mail address specified in this page. Please assign the mail address first and click this button to execute a test for verify the mail address is available or not.</p> <p>SMTP Server/SMTP Port - The IP address/Port number of the SMTP server.</p> <p>Mail To - Assign a mail address for sending mails out.</p> <p>Return-Path - Assign a path for receiving the mail from outside.</p> <p>Use SSL - Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.</p> <p>Authentication - Check this box to activate this function while using e-mail application.</p> <p>Username - Enter the user name for authentication.</p> <p>Password - Enter the password for authentication.</p> <p>Enable E-mail Alert - Check the box to send alert message to the e-mail box while the router detecting the item(s) you specify here.</p>

Click **OK** to save these settings.

For viewing the Syslog, please do the following:

1. Just set your monitor PC's IP address in the field of Server IP Address
2. Install the Router Tools in the **Utility** within provided CD. After installation, click on the **Router Tools>>Syslog** from program menu.

- From the Syslog screen, select the router you want to monitor. Be reminded that in **Network Information**, select the network adapter used to connect to the router. Otherwise, you won't succeed in retrieving information from the router.

System Time: Time taken from the computer which runs the custom application.

Router Time: Time taken from router.

VI-1-8 Time and Date

It allows you to specify where the time of the router should be inquired from.

System Maintenance >> Time and Date

Time Information

Current System Time	2000 Jan 3 Mon 0 : 21 : 2	Inquire Time
---------------------	---------------------------	--------------

Time Setup

<input checked="" type="checkbox"/> Enable TLS 1.2 <input checked="" type="checkbox"/> Enable TLS 1.1 <input checked="" type="checkbox"/> Enable TLS 1.0 <input type="checkbox"/> Enable SSL 3.0		
Device Management		
<input type="checkbox"/> Respond to external device		

OK

Available settings are explained as follows:

Item	Description
Router Name	Type in the router name provided by ISP.
Default: Disable Auto-Logout	If it is enabled, the function of auto-logout for web user interface will be disabled.  The web user interface will be open until you click the

	<p>Logout icon manually.</p> 
Enable Validation Code in Internet/LAN Access	<p>If it is enabled, the mechanism of validation code will be offered by Vigor router. That is, the client must type validation code while accessing into Internet or web user interface of Vigor router.</p>
Internet Access Control	<p>Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p>Disable PING from the Internet - Check the checkbox to reject all PING packets from the Internet. For security issue, this function is enabled by default.</p>
Access List from the Internet	<p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p>List index in IP Object- Enter the index number of the IP object profile. Related IP with Subnet Mask will appear automatically.</p>
Management Port Setup	<p>User Define Ports - Check to specify user-defined port numbers for the Telnet, HTTP, HTTPS, FTP, TR-069 and SSH servers.</p> <p>Default Ports - Check to use standard port numbers for the Telnet and HTTP servers.</p>
Brute Force Protection	<p>Any client trying to access into Internet via Vigor router will be asked for passing through user authentication. Such feature can prevent Vigor router from attacks when a hacker tries every possible combination of letters, numbers and symbols until find out the correct combination of password.</p> <p>Enable brute force login protection - Enable the protection mechanism.</p> <p>Maximum login failure - Specify the maximum number of wrong password that client can try for logging to Vigor router.</p> <p>Penalty period - Set a period of time to block the IP address which is used (by user or hacker) for passing through the user authentication again and again but failed always. When the time is up, Vigor system will unblock that IP and allow it to access into Vigor router again.</p> <p>Blocked IP List - Open another web page which displays current blocked IPs.</p>
TLS/SSL Encryption Setup	<p>Enable SSL 3.0 and / or TLS 1.0/1.1/1.2 - Check the box to enable the function of SSL 3.0 and / or TLS 1.0/1.1/1.2 if required.</p> <p>Due to security consideration, the built-in HTTPS and SSL VPN server of the router had upgraded to TLS1.x protocol. If you are using old browser(eg. IE6.0) or old SmartVPN Client, you may still need to enable SSL 3.0 to make sure you can connect, however, it's not recommended.</p>

Device Management	<p>Check the box to enable the device management function for Vigor2915.</p> <p>Respond to external device - If it is enabled, Vigor2915 will be regarded as slave device. When the external device (master device) sends request packet to Vigor2915, Vigor2915 would send back information to respond the request coming from the external device which is able to manage Vigor2915.</p>

<input checked="" type="checkbox"/> IP Routed Subnet	<input type="checkbox"/>	<input type="text"/>

Note:
If an IP Object is specified in a LAN Subnet, the setting will be applied to the selected IP only.

Available settings are explained as follows:

Item	Description
Allow management from LAN	Enable the checkbox to allow system administrators to login from LAN interface. There are several servers provided by the system which allow you to manage the router from LAN interface. Check the box(es) to specify.
Apply To Subnet	Check the LAN interface for the administrator to use for accessing into web user interface of Vigor router. Index in <u>IP Object</u> - Enter the index number of the IP object profile. Related IP address will appear automatically.

After finished the above settings, click OK to save the configuration.

VI-1-11 Panel Control

The behavior of the LEDs, buttons, USB ports and LAN ports on the front panel of the Vigor router can be customized as desired.

For LED

By default, the LEDs are enabled, and will illuminate or blink continuously to show the status of the various functions in the router. However, they can be configured to remain off at all times, or remain off until a button is pressed to wake them up.

System Maintenance >> Panel Control

LED	Button	USB	Refresh
<input checked="" type="checkbox"/> Enable LED <input type="checkbox"/> Enable Sleep Mode Turn off LED after <input type="text" value="1"/> minutes (Default: 1 minute)			

Note:

Enable the Sleep Mode will make the functions of "Wireless Button" and "Factory Reset Button" on the front panel as below:

LED Status	LED On	LED Off
Wireless Button	Wireless On/Off/WPS	Turn LED On*
Factory Reset Button	Press 1 second: Turn LED off immediately* Press till the ACT light flashing: Reset router	

*Still functional even the buttons are disabled.

OK

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to display the latest information.
Enable LED	Select to enable front panel LEDs. <ul style="list-style-type: none"> ● Enable Sleep Mode/Turn off LED after _ minutes - Available when Enable LED is selected. Select this option to turn off the LEDs after the specified number of minutes. ● When sleep mode is enabled, LEDs can be woken up by pressing either the Wireless LAN ON/OFF/WPS button or the Factory Reset button on the front panel, or by clicking the Wake up LED button on this page. When LEDs are lit, they can be put to sleep by briefly pressing the Factory Reset button, or by clicking the LED sleep immediately button on this page.
Status	Shows the status of the LEDs: Status : Sleep Wake up LED – LEDs are in sleep mode. To wake them up, do one of the following: <ul style="list-style-type: none"> ● press the Wake up LED button on this page ● press the Wireless On/Off/WPS button on the front panel ● press the Factory Reset button on the front panel.

	<p>Status : Awake, sleep after 1 minutes LED sleep immediately</p> <ul style="list-style-type: none"> - LEDs are awake. To put them to sleep immediately ● press the LED sleep immediately button on this page ● press the Factory Reset button on the front panel for 1 second.
--	--

After finished the above settings, click OK to save the configuration.

For Button

The **Factory Reset** and **Wireless ON/OFF/WPS** buttons on the front panel are enabled by default and can be enabled or disabled if required. Disabling the Factory Reset button will prevent tampering by unauthorized parties, or to avoid accidental triggering of a router reset when being used wake up LEDs. Disabling the wireless button will prevent changing the wireless setting when LED Sleep Mode is enabled, and the buttons are primarily used to turn the LEDs on and off.

Click the **Button** tab to get the following page.

System Maintenance >> Panel Control

LED	Button	USB	Refresh

Refresh	Click to refresh the page to display the latest information.
Port	The number corresponds to the USB port number shown on the front panel.
Enable	Deselect to disable the USB port. The default value is enabled.
Status	Shows the status of the USB port. No device - no USB device is connected to the port. Connected - a USB device is connected to the port. --- - the USB port is disabled.

After finished the above settings, click OK to save the configuration.

VI-1-12 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

[System Maintenance >> Self-Signed Certificate](#)

VI-1-13 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to open the following page.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

Using current configuration
 Using factory default configuration

Auto Reboot Time Schedule

Schedule Profile : ▾, ▾, ▾, ▾

Note: Action and Idle Timeout settings will be ignored.

Schedule Profile - You can type in four sets of time schedule for performing system reboot. All the schedules can be set previously in **Applications >> Schedule** web page and you can use the number that you have set in that web page.

If you want to reboot the router using the current configuration, check **Using current configuration** and click **Reboot Now**. To reset the router settings to default values, check **Using factory default configuration** and click **Reboot Now**. The router will take 5 seconds to reboot the system.

Info

When the system pops up Reboot System web page after you configure web settings, please click Reboot Now to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

VI-1-14 Firmware Upgrade

Click System Maintenance>> Firmware Upgrade to proceed to firmware upgrade.

System Maintenance >> Firmware Upgrade ?

Firmware Version Status

Current Firmware Version: 4.0.5	Check The Latest Firmware
---------------------------------	---

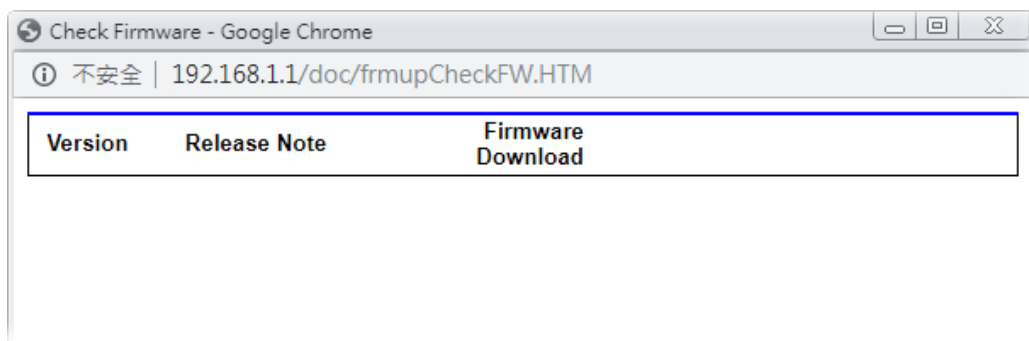

Web Firmware Upgrade

Select a firmware file. <input type="button" value="選擇檔案"/> 未選擇任何檔案
Click Upgrade to upload the file. <input type="button" value="Upgrade"/> <input type="button" value="Preview"/>

Note:

Upgrade using the ALL file will retain existing router configuration, whereas using the RST file will reset the configuration to factory defaults.

Click the button of **Check The Latest Firmware** to open a pop up window displaying the newest firmware version released for such Vigor router.

Choose the one you need and click **Download**. After that, click **Select** to specify the one you just download. Then, click **Upgrade**. The system will upgrade the firmware of the router automatically.

VI-1-15 Dashboard Control

There are nine groups of setting information which can be displayed on Dashboard as a reference for administrator/user. Except for Front Panel and System Information, the settings information regarding to the groups listed on this page can be hidden if required.

System Maintenance >> Dashboard Control

VI-2 Bandwidth Management

Sessions Limit

A PC with private IP address can access to the Internet via NAT router. The router will generate the records of NAT sessions for such connection. The P2P (Peer to Peer) applications (e.g., BitTorrent) always need many sessions for procession and also they will occupy over resources which might result in important accesses impacted. To solve the problem, you can use limit session to limit the session procession for specified Hosts.

Bandwidth Limit

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Limit Bandwidth to make the bandwidth usage more efficient.

Quality of Service (QoS)

Deploying QoS (Quality of Service) management to guarantee that all applications receive the service levels required and sufficient bandwidth to meet performance expectations is indeed one important aspect of modern enterprise network.

One reason for QoS is that numerous TCP-based applications tend to continually increase their transmission rate and consume all available bandwidth, which is called TCP slow start. If other applications are not protected by QoS, it will detract much from their performance in the overcrowded network. This is especially essential to those are low tolerant of loss, delay or jitter (delay variation).

Another reason is due to congestions at network intersections where speeds of interconnected circuits mismatch or traffic aggregates, packets will queue up and traffic can be throttled back to a lower speed. If there's no defined priority to specify which packets should be discarded (or in another term "dropped") from an overflowing queue, packets of sensitive applications mentioned above might be the ones to drop off. How this will affect application performance?

There are two components within Primary configuration of QoS deployment:

- Classification: Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- Scheduling: Based on classification of service level to assign packets to queues and associated service types

The basic QoS implementation in Vigor routers is to classify and schedule packets based on the service type information in the IP header. For instance, to ensure the connection with the headquarter, a teleworker may enforce an index of QoS Control to reserve bandwidth for HTTPS connection while using lots of application at the same time.

One more larger-scale implementation of QoS network is to apply DSCP (Differentiated Service Code Point) and IP Precedence disciplines at Layer 3. Compared with legacy IP Precedence that uses Type of Service (ToS) field in the IP header to define 8 service classes, DSCP is a successor creating 64 classes possible with backward IP Precedence compatibility. In a QoS-enabled network, or Differentiated Service (DiffServ or DS) framework, a DS domain owner should sign a Service License Agreement (SLA) with other DS domain owners to define the service level provided toward traffic from different domains. Then each DS node in these domains will perform the priority treatment. This is called per-hop-behavior (PHB). The definition of PHB includes Expedited Forwarding (EF), Assured Forwarding (AF), and Best Effort (BE). AF defines the four classes of delivery (or forwarding) classes and three levels of drop precedence in each class.

Vigor routers as edge routers of DS domain shall check the marked DSCP value in the IP header of bypassing traffic, to allocate certain amount of resource execute appropriate policing, classification or scheduling. The core routers in the backbone will do the same checking before executing treatments in order to ensure service-level consistency throughout the whole QoS-enabled network.

However, each node may take different attitude toward packets with high priority marking since it may bind with the business deal of SLA among different DS domain owners. It's not easy to achieve deterministic and consistent high-priority QoS traffic throughout the whole network with merely Vigor router's effort.

Web User Interface

Below shows the menu items for Bandwidth Management.

VI-2-1 Sessions Limit

In the Bandwidth Management menu, click Sessions Limit to open the web page.

Bandwidth Management >> Sessions Limit

IPv4
IPv6

Enable Disable

Default Max Sessions:

Limitation List

Index	Start IP	End IP	Max Sessions

Specific Limitation

Start IP: End IP:

Maximum Sessions:

Administration Message (Max 255 characters)

You have reached the maximum number of permitted Internet sessions.<p>Please close one or more applications to allow further Internet access.<p>Contact your system administrator for further information.

Time Schedule

Schedule Profile : , , ,

Note: Action and Idle Timeout settings will be ignored.

To activate the function of limit session, simply click **Enable** and set the default session limit. Available settings are explained as follows:

Item	Description
Session Limit	<p>Enable - Click this button to activate the function of limit session.</p> <p>Disable - Click this button to close the function of limit session.</p> <p>Default session limit - Defines the default session number used for each computer in LAN.</p>

Limitation List	Displays a list of specific limitations that you set on this web page.
Specific Limitation	<p>Start IP - Defines the start IP address for limit session.</p> <p>End IP - Defines the end IP address for limit session.</p> <p>Maximum Sessions - Defines the available session number for each host in the specific range of IP addresses. If you do not set the session number in this field, the system will use the default session limit for the specific limitation you set for each index.</p> <p>Add - Adds the specific session limitation onto the list above.</p> <p>Edit - Allows you to edit the settings for the selected limitation.</p> <p>Delete - Remove the selected settings existing on the limitation list.</p>
Administration Message	<p>Enter the words which will be displayed when reaches the maximum number of Internet sessions permitted.</p> <p>Default Message - Click this button to apply the default message offered by the router.</p>
Time Schedule	<p>Schedule Profile - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p>

After finishing all the settings, please click **OK** to save the configuration.

VI-2-2 Bandwidth Limit

In the Bandwidth Management menu, click **Bandwidth Limit** to open the web page.

Bandwidth Management >> Bandwidth Limit

IPv4
IPv6

Enable
 Disable
 IP Routed Subnet

Default Limit (Per User)
 TX Limit: Kbps
 RX Limit: Kbps

Limitation List (Max. 10 entries)

Index	Start IP/Group	End IP/Object	TX limit	RX limit	Share

Add Entry By:
 IP Range
 IP Object
 Start IP:
 End IP:

Each
 Shared
 TX Limit: Kbps
 RX Limit: Kbps

Auto-Adjustment

Allow user to use more bandwidth than the assigned limit when there are bandwidth available.

Smart Bandwidth Limit

Apply the below limit to users not in Limitation List and user more than sessions

TX Limit : Kbps
 RX Limit : Kbps

Time Schedule

Schedule Profile :
 ,
 ,
 ,

Note:

1. Use "0" for TX/RX Limit for unlimited bandwidth.
2. Available bandwidth is calculated according to the maximum bandwidth detected or the Line Speed defined in WAN >> **General Setup** when in "According to Line Speed" Load Balance mode.
3. The Action and Idle Timeout settings in the Schedule Profile will be ignored.
4. When Bandwidth Limit is enabled, Hardware Acceleration will not work.

To activate the function of limit bandwidth, simply click **Enable** and set the default upstream and downstream limit.

Available settings are explained as follows:

Item	Description
Enable	Click this button to activate the function of limit bandwidth. IP Routed Subnet - Check this box to apply the bandwidth limit to the second subnet specified in LAN>>General Setup. It is available for IPv4 settings only. Default limit (Per User) <ul style="list-style-type: none"> ● TX Limit - Define the default speed of the upstream for each computer in LAN. ● RX limit - Define the default speed of the downstream for each computer in LAN.
Disable	Click this button to close the function of limit bandwidth.
Limitation List	Display a list of specific limitations that you set on this web

	page.
Add Entry By	<p>IP Range - All the IPs within the range defined will be restricted by bandwidth limit defined by TX Limit and RX Limit below.</p> <ul style="list-style-type: none"> ● Start IP - Define the start IP address for limit bandwidth. ● End IP - Define the end IP address for limit bandwidth. <p>IP Object - All the IPs specified by the selected IP object or IP group will be restricted by bandwidth limit defined by TX Limit and RX Limit below.</p> <ul style="list-style-type: none"> ● IP Group - Specify an IP group by using the drop down list. ● IP Object - Specify an IP object by using the drop down list. <p>Each / Shared - Select Each to make each IP within the range of Start IP and End IP having the same speed defined in TX limit and RX limit fields; select Shared to make all the IPs within the range of Start IP and End IP share the speed defined in TX limit and RX limit fields.</p> <ul style="list-style-type: none"> ● TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index. ● RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index. <p>Add - Add the specific speed limitation onto the list above.</p> <p>Edit - Allow you to edit the settings for the selected limitation.</p> <p>Delete - Remove the selected settings existing on the limitation list.</p>
Auto-Adjustment	Allow user to use more bandwidth --- Check this box to make the best utilization of available bandwidth.
Smart Bandwidth Limit	<p>Apply the below limit to ... - Check this box to have the bandwidth limit determined by the system automatically.</p> <ul style="list-style-type: none"> ● TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index. ● RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.
Time Schedule	Schedule Profile - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.

VI-2-3 Quality of Service

In the **Bandwidth Management** menu, click **Quality of Service** to open the web page. This page displays the QoS settings result of the WAN interface.

Bandwidth Management >> Quality of Service

[Set to Factory Default](#)

Index	Enable	Direction	Inbound/ Outbound Bandwidth		Class 1	Class 2	Class 3	Others	Status		
WAN1	<input type="checkbox"/>	BOTH	100	Mbps	100	Mbps	25 %	25 %	25 %	25 %	Status
WAN2	<input type="checkbox"/>	BOTH	100	Mbps	100	Mbps	25 %	25 %	25 %	25 %	Status

Note:
QoS may not work properly if the bandwidth entered is not correct. Before enable QoS, you may run speed test (from e.g.,http://speedtest.net) or contact your ISP for the accurate bandwidth.

Class Rule

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
Add						

Note:

- The packets that don't match any class rules above will be classified into 'Others'
- Go to **User Defined Service Type** to edit/delete user-defined service type profiles.
- Hardware Acceleration will not work on wired WAN interfaces with QoS enabled.

VoIP Prioritization

Enable the First Priority for VoIP SIP/RTP:
 SIP UDP Port: (Default:5060)

Tag Outbound Traffic

Class 1	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 2	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 3	<input type="checkbox"/> Add DSCP or Precedence Value	Default

Available settings are explained as follows:

Item	Description
General Setup	<p>Index - Display the WAN/LTE interface number link that you can edit.</p> <p>Enable - Check the box to enable the QoS function for WAN/LTE interface. If it is enabled, you can configure general QoS setting for each WAN/LTE interface.</p> <ul style="list-style-type: none"> ● Direction - Define which traffic the QoS Control settings will apply to. <ul style="list-style-type: none"> ■ IN- apply to incoming traffic only. ■ OUT-apply to outgoing traffic only. ■ BOTH- apply to both incoming and outgoing traffic. ● Inbound/Outbound Bandwidth - Set the connecting rate of data input/output for other WAN. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 1000kbps for this box. The default value is 10000kbps. ● Class 1 ~ 3 / Others - Define the ratio of bandwidth to upstream speed and bandwidth to downstream speed. There are four queues allowed for QoS control. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. In which, the "Others" field is used for the packets which are not suitable for the three class

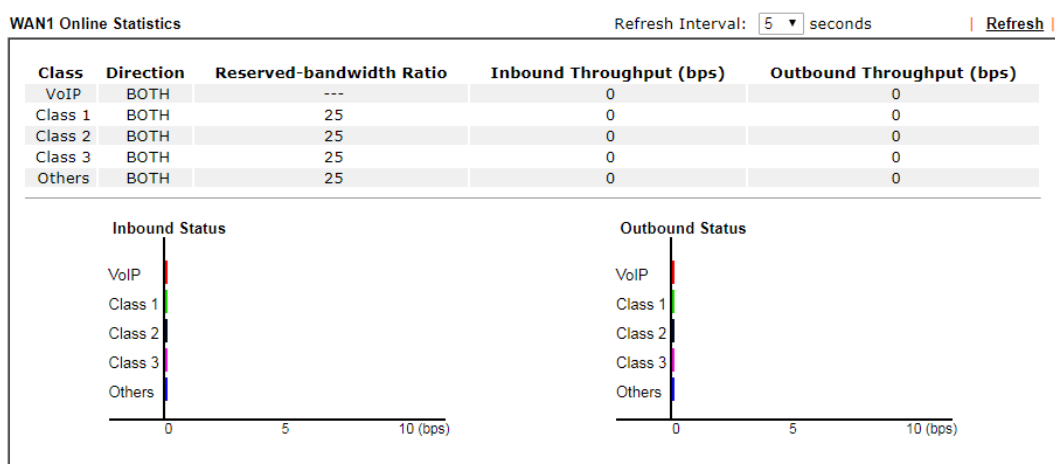

Item	Description
	rules. Status - Display the online statistics of WAN interface.
Class Rule	Set detailed settings for the selected Class. Index - Display the class number that you can edit. Enable - Display the status of this class rule. QoS Class - Display the QoS class level. Local Address - Display the local IP address for the rule. Remote Address - Display the remote IP address for the rule. DSCP - Display the levels of the data for processing with QoS control. Service Type - Display detailed settings for the service type. Add - Click it to create a class rule for QoS.
VoIP Prioritization	Enable the First Priority for VoIP SIP/RTP - When this feature is enabled, the VoIP SIP/UDP packets will be sent with highest priority. SIP UDP Port - Set a port number used for SIP.
Tag Outbound Traffic	Add DSCP or Precedence Value for Class 1 to Class 3 - Check the box to add DSCP or Precedence value to Class 1 to Class 3.

You can configure general setup for the WAN interface, edit the Class Rule, and edit the Service Type for the Class Rule for your request. Click the link (WAN1 to WAN2) under Index to access into next page for the general setup of WAN interface. As to class rule, simply click the Add link to access into next page for configuration.

Online Statistics

Display an online statistics for quality of service for your reference. This feature is available only when the Quality of Service for WAN interface is enabled.

Bandwidth Management >> Quality of Service

Cancel

General Setup for WAN Interface

Click WAN interface number link to configure the limited bandwidth ratio for QoS of the WAN interface.

Bandwidth Management >> Quality of Service >> WAN1

Enable UDP Bandwidth Control
Limited_bandwidth Ratio %

Outbound TCP ACK Prioritize

Available settings are explained as follows:

Item	Description
Enable UDP Bandwidth Control	Set the limited bandwidth ratio. This is a protection of TCP application traffic since UDP application traffic such as streaming video will exhaust lots of bandwidth. Limited_bandwidth Ratio - The ratio typed here is reserved for limited bandwidth of UDP application.
Outbound TCP ACK Prioritize	The difference in bandwidth between download and upload are great in ADSL2+ environment. For the download speed might be impacted by the uploading TCP ACK, you can check this box to push ACK of upload faster to speed the network traffic.

Info

The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

Add a Class Rule for QoS

1. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. To add, edit or delete the class rule, please click the **Add / Edit** button of that one.

Bandwidth Management >> Quality of Service

| [Set to Factory Default](#) |

General Setup										
Index	Enable	Direction	Inbound/ Outbound Bandwidth		Class 1	Class 2	Class 3	Others	Status	
WAN1	<input type="checkbox"/>	BOTH	100	Mbps	100	Mbps	25 %	25 %	25 %	Status
WAN2	<input type="checkbox"/>	BOTH	100	Mbps	100	Mbps	25 %	25 %	25 %	Status

Note:
QoS may not work properly if the bandwidth entered is not correct. Before enable QoS, you may run speed test (from e.g., <http://speedtest.net>) or contact your ISP for the accurate bandwidth.

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
Add						

Note:
1. The packets that don't match any class rules above will be classified into 'Others'
2. Go to [User Defined Service Type](#) to edit/delete user-defined service type profiles.
3. Hardware Acceleration will not work on wired WAN interfaces with QoS enabled.

VoIP Prioritization

Enable the First Priority for VoIP SIP/RTP:
SIP UDP Port: 5060 (Default:5060)

Tag Outbound Traffic

Class 1	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 2	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 3	<input type="checkbox"/> Add DSCP or Precedence Value	Default

OK Cancel

2. For adding a new rule, click **Add** to open the following page.

Bandwidth Management >> Quality of Service

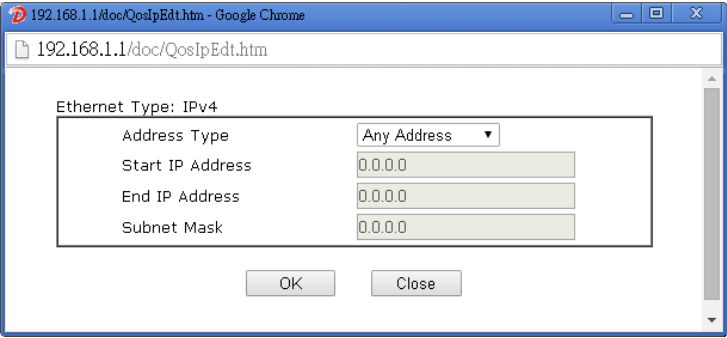

Rule 1

<input type="checkbox"/> Enable	<input type="checkbox"/> Hardware Acceleration
IP Version	<input checked="" type="radio"/> IPv4 <input type="radio"/> IPv6
Local IP Address	Any <input type="button" value="Edit"/>
Remote IP Address	Any <input type="button" value="Edit"/>
DiffServ CodePoint	ANY
Service Type	DNS(TCP/UDP:53)
QoS Class	Class 1

OK Delete Cancel

Available settings are explained as follows:

Item	Description
Enable	Check this box to invoke these settings.
Hardware Acceleration	Check this box to enable the hardware acceleration when such rule is applied.
IP Version	Please specify which protocol (IPv4 or IPv6) will be used for this rule.
Local Address	Click the Edit button to set the local IP address (on LAN) for the rule.

<p>Remote Address</p>	<p>Click the Edit button to set the remote IP address (on LAN/WAN) for the rule.</p>  <p>Address Type - Determine the address type for the source address.</p> <p>For Single Address, you have to fill in Start IP address.</p> <p>For Range Address, you have to fill in Start IP address and End IP address.</p> <p>For Subnet Address, you have to fill in Start IP address and Subnet Mask.</p>
<p>DiffServ CodePoint</p>	<p>All the packets of data will be divided with different levels and will be processed according to the level type by the system. Please assign one of the levels of the data for processing with QoS control.</p>
<p>Service Type</p>	<p>It determines the service type of the data for processing with QoS control. It can also be edited. You can choose the predefined service type from the Service Type drop down list. Those types are predefined in factory. Simply choose the one that you want for using by current QoS.</p>
<p>QoS Class</p>	<p>Specify the QoS class (1, 2 or 3) for this rule.</p>

3. After finishing all the settings here, please click **OK** to save the configuration.

Bandwidth Management >> Quality of Service

General Setup | [Set to Factory Default](#) |

Index	Enable	Direction	Inbound/ Outbound Bandwidth		Class 1	Class 2	Class 3	Others	Status

2. Go to [User Defined Service Type](#) to edit/delete user-defined service type profiles.
3. Hardware Acceleration will not work on wired WAN interfaces with QoS enabled.

VoIP Prioritization

Enable the First Priority for VoIP SIP/RTP: 

SIP UDP Port: (Default:5060)

Tag Outbound Traffic

Class 1	<input type="checkbox"/>	Add DSCP or Precedence Value	Default ▾
Class 2	<input type="checkbox"/>	Add DSCP or Precedence Value	Default ▾
Class 3	<input type="checkbox"/>	Add DSCP or Precedence Value	Default ▾

By the way, you can set up to 20 rules for one Class. If you want to edit an existed rule, please select the radio button of that one and click **Edit** to open the rule edit page for modification.

Retag the Packets for Identification

Packets coming from LAN IP can be retagged through QoS setting. When the packets sent out through WAN interface, all of them will be tagged with certain header and that will be easily to be identified by server on ISP.

For example, in the following illustration, the VoIP packets in LAN go into Vigor router without any header. However, when they go forward to the Server on ISP through Vigor router, all of the packets are tagged with AF (configured in Bandwidth >>QoS>>Class) automatically.

Class Rule

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
1	<input checked="" type="checkbox"/>	Class 1	Any	Any	ANY	SIP(UDP:5060)
2	<input checked="" type="checkbox"/>	Class 2	Any	Any	ANY	HTTP(TCP:80)
3	<input type="checkbox"/>	Class 3	Any	Any	ANY	SMTP(TCP:25)

Note:

1. The packets that don't match any class rules above will be classified into 'Others'
2. Go to **User Defined Service Type** to edit/delete user-defined service type profiles.

VoIP Prioritization

 SIP UDP Port: (Default: 5060)

Tag Outbound Traffic

Class 1	<input checked="" type="checkbox"/> Add DSCP or Precedence Value	AF Class1 (Medium Drop) ▼
Class 2	<input checked="" type="checkbox"/> Add DSCP or Precedence Value	AF Class2 (Low Drop) ▼
Class 3	<input checked="" type="checkbox"/> Add DSCP or Precedence Value	AF Class3 (Medium Drop) ▼

VI-2-4 APP QoS

The QoS function is used to do bandwidth management for the services with certain IP or port number. However, there is no effect of bandwidth management on the service such as VNC or PPTV without fixed IP or port number.

APP QoS employs the function of APP Enforcement to detect the types of software in application layer. By combining the function of QoS (adjustment on Inbound/Outbound bandwidth and bandwidth ratio), Vigor router can perform the bandwidth management for the protocols, streaming, remote control, web HD and so on.

Click **Bandwidth Management >> APP QoS** to open the following page.

Bandwidth Management >> APP QoS

APP QoS

<input type="checkbox"/>	TELNET		QoS Class 1 (High) ▼

Note:
Please remember to adjust Inbound/Outbound bandwidth of your network in "Quality of Service". This will help QoS to work more efficient.

Available settings are explained as follows:

Item	Description
Enable/Disable	Click Enable to activate APP QoS function. Click Disable to deactivate APP QoS function.
Traceable	The protocol listed below is traceable by Vigor router. Each tab offers different types of protocols to fit your request.
Untraceable	The protocol listed below is not easy to be traced by Vigor router.

	Each tab offers different types of protocols to fit your request.
Select All	Click it to select all of the protocols.
Clear All	Click it to de-select all of the protocols.
Apply to all	Choose one of the actions from the drop down list. It is prepared for applying to all protocols. Apply - Click it to make the selected action be applied all of the selected protocols immediately.
Action	There are many protocols which can be specified with different QoS Class. 

VI-3 Hotspot Web Portal

The Hotspot Web Portal feature allows you to set up profiles so that LAN users could either be redirected to specific URLs, or be shown messages when they first connect to the Internet through the router. Users could be required to read and agree to terms and conditions, or authenticate themselves, prior to gaining access to the Internet. Other potential uses include the serving of advertisements and promotional materials, and broadcast of public service announcements.

Web User Interface

VI-3-1 Profile Setup

Select **Profile Setup** to create or modify Portal profiles. Up to 4 profiles can be created to meet different requirements according to LAN subnets, WLAN SSIDs, origin and destination IP addresses, etc.

Hotspot Web Portal >> Profile Setup

Hotspot Web Portal Profile:

Index	Enable	Comments	Login Mode	Applied Interface	
1.	<input type="checkbox"/>		Click-through	None	Preview
2.	<input type="checkbox"/>		Click-through	None	Preview

Note:

1. The router must connect to the Internet before webpage redirection will work.
2. If the LAN clients are using another DNS server on LAN, please make sure the DNS query for domain name "portal.draytek.com" will be resolved by the router.

OK

Available settings are explained as follows:

Item	Description
Index	Click the index number link to view or update the profile settings.
Enable	Check the box to enable the profile.
Comments	Shows the description of the profile.
Login Mode	Shows the login mode used by the profile. See the section <i>Login Mode</i> for details.
Applied Interface	Shows the interfaces to which this profile applies.
Preview	Click this button to preview the Hotspot Web Portal page that will be displayed to users.

VI-3-1-1 Login Method

There are four login methods to choose from for authenticating network clients: **Skip Login**, **Click Through**, **Social Login**, **PIN Login**, and **Social or PIN Login**. Each login mode will present a different web page to users when they connect to the network.

(A) Skip Login, landing page only

This mode does not perform any authentication. The user will be redirected to the landing page. The user can then leave the landing page to visit other websites.

(B) Click-through

The following page will be shown to the users when they first attempt to access the Internet through the router. After clicking **Accept** on the page, users will be directed to the landing page (defined in Captive Portal URL) and be granted access to the Internet.

(C) Various Hotspot Login

An authentication page will appear when users attempt to access the Internet for the first time via the router. After authenticating themselves using a Facebook account, Google account, PIN code, password for RADIUS sever, they will be directed to the landing page and be granted access to the Internet.

(D) External Portal Server

External RADIUS server will authenticate the users when they attempt to access the Internet for the first time via the router.

VI-3-1-2 Steps for Configuring a Web Portal Profile

Login Method

Click the index link (e.g., #1) of the selected profile to display the following page.

Enable this profile

Comments:

Portal Server

Portal Method

- Skip Login, landing page only
- Click through
- Various Hotspot Login
- External Portal Server

Captive Portal URL

Login Methods

Choose Login Method

- Login with Facebook
Note : When Login with Facebook is selected, the protocol of the Captive Portal URL will be changed to HTTPS.
- Login with Google
- Receive PIN via SMS
- Login with RADIUS

Available settings are explained as follows:

Item	Description
Enable this profile	Check to enable this profile.
Comments	Enter a brief description to identify this profile.
Portal Server	
Portal Method	There are four methods to be selected as for portal server. <input type="radio"/> Skip Login, landing page only <input type="radio"/> Click through <input checked="" type="radio"/> Various Hotspot Login <input type="radio"/> External Portal Server
Captive Portal URL	Enter the captive portal URL.
Redirection URL	This setting is available when External Portal Server is selected as the portal method. Enter the URL to which the client will be redirected.
RADIUS Server	This setting is available when External Portal Server is selected as the portal method. To configure the RADIUS server, click the External RADIUS Server link and you will be presented with the configuration page. If the RADIUS server supports authentication by MAC address, enable MAC authentication and select the MAC address format that is used by the RADIUS server.
Login Methods	

Choose Login Method	<p>This setting is available when Various Hotspot Login is selected as the portal method. Select one or more desired login methods:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Login with Facebook <input type="checkbox"/> Login with Google <input type="checkbox"/> Receive PIN via SMS <input type="checkbox"/> Login with RADIUS
Facebook	<p>This setting is available when Various Hotspot Login is selected as the portal method. Select one or more desired login methods:</p> <p>Facebook APP ID - Enter a valid Facebook developer app ID. If you do not already have an app ID, refer to section A-1 <i>How to create a Facebook App ID for Web Portal Authentication</i> for instructions on obtaining an APP ID.</p> <p>Facebook APP Secret - Enter the secret configured for the APP ID entered above. Refer to section A-1 <i>How to create a Facebook App ID for Web Portal Authentication</i> for details.</p>
Google	<p>This setting is available when Various Hotspot Login is selected as the portal method. Select one or more desired login methods:</p> <p>Google App ID - Enter a valid Google app ID. If you do not already have an app ID, refer to section A-2 <i>How to create a Google App ID for Web Portal Authentication</i> for instructions on obtaining an APP ID.</p> <p>Google App Secret - Enter the secret configured for the APP ID entered above. Refer to section A-2 <i>How to create a Google APP ID for Web Portal Authentication</i> for details.</p>
SMS Provider	<p>This setting is available when Receive PIN via SMS is selected as the login method.</p> <p>Receiving PIN via SMS Provider - Select the SMS Provider used to send PIN notifications SMS providers are configured in Objects Setting >> SMS / Mail Service Object.</p>
Radius Server	<p>This setting is available when Login with RADIUS is selected as the login method.</p> <p>Authentication Method - Click link to configure the external RADIUS server for authenticating web portal clients.</p> <p>RADIUS MAC Authentication - Check Enable to activate user authentication by MAC address.</p> <p>MAC Address Format - Select the MAC address format that is used by the RADIUS server.</p>
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to save the configuration on this page and proceed to the next page.

If you have chosen **Skip Login, landing page only** or **External Portal Server** as the portal method, skip to step 4 *Whitelisting* below.

Otherwise, proceed to configure the login page by following steps 2 and 3.

2 Background

If you have selected a Login Mode that requires authentication, select a background for the login page.

Hotspot Web Portal >> ProfileSetup

Choose Login Background

Color Background

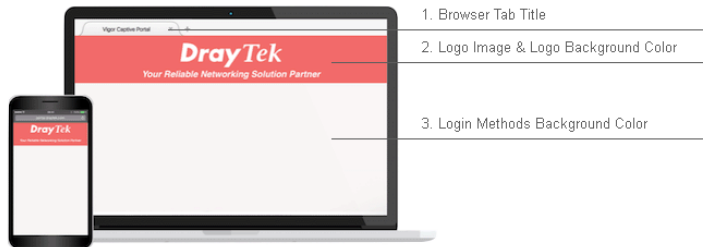

Image Background

Browser Tab Title

Logo Image

Logo Background Color

(format : FFFFFFFF)

Login Method Background Color

(format : FFFFFFFF)

Available settings are explained as follows:

Item	Description
Choose Login Background	Select either Color Background or Image Background as the login page background scheme.
Browser Tab Title	Enter the text to be shown as the webpage title in the browser.

Logo Image	The DrayTek Logo will be displayed by default. However, you can enter HTML text or upload an image to replace the default logo.
Login Method Background Color	<p>Select the background color of the login panel from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.</p> 
Opacity (10 ~ 100)	Available when Image Background is selected. Set the opacity of the background image.
Background Image	Available when Image Background is selected. Click Browse... to select an image file (.JPG or .PNG format), then click Upload to upload it to the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

If you have selected **Skip Login, landing page only** or **External Portal Server** as the portal method, proceed to Step 4 *Whitelist Setting*; otherwise, continue to Step 3 *Login Page Setup*.

3 Login Page Setup

In this step you can configure settings for the login page.

Click Through

This section describes the Login Page setup if you have selected **Click Through** as the Login Method.

Hotspot Web Portal >> Profile Setup

Cancel	Click to abort the configuration process and return to the profile summary page.

4 Whitelist Setting

In this step you can configure the whitelist settings. Users are allowed to send and receive traffic that satisfies whitelist settings.

Hotspot Web Portal >> Profile Setup

NAT Rules	Dest Domain	Dest IP	Dest Port	Source IP
Always allow outbound connections from hosts in		<input type="checkbox"/> NAT >> Port Redirection <input type="checkbox"/> NAT >> Open Ports <input type="checkbox"/> NAT >> DMZ		

Available settings are explained as follows:

Item	Description
NAT Rules	To prevent web portal settings from conflicting with NAT rules resulting in unexpected behavior, select the NAT rules that are allowed to bypass the web portal. Hosts listed in selected NAT rules can always access the Internet without being intercepted by the web portal.
Dest Domain	Enter up to 30 destination domains that are allowed to be accessed.
Dest IP	Enter up to 30 destination IP addresses that are allowed to be accessed.
Dest Port	Enter up to 30 destination protocols and ports that are allowed through the router.
Source IP	Enter up to 30 source IP addresses that are allowed through the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

5 More Options

In this step you can configure advanced options for the Hotspot Web Portal.

Hotspot Web Portal >> Profile Setup

1 — 2 — 3 — 4 — 5

Login Method Background Login Page Setup Whitelist Setting **More Options**

Quota Management

Login Method	Quota Policy Profile	Valid Time	Device Allowed	Bandwidth Limit	Session Limit
Click Through Login	1.Default	0d 5h 0m	Unlimited	Unlimited	Unlimited

Note:
To modify the quota settings, please go to [Hotspot Web Portal >> Quota Management](#)

Web Portal Options

HTTPS Redirection Enable
When an unauthenticated client opening a HTTPS page, redirect will work but certificate errors may be shown.
Disable this function to redirect only HTTP pages. HTTPS browsing will timeout without redirection and also no certificate errors.

Captive Portal Detection Enable
Trigger the unauthenticated client to automatically pop-up the Web Portal page when connects to Wi-Fi.
This function is not available when using **Social Login** because the page may not be shown correctly due to the limitation of the OS built-in Captive Portal Detection.

Landing Page After Authentication

Fixed URL

User Requested URL

Bulletin Message

(Max 511 characters)

Note:

 SSID4

Available settings are explained as follows:

Item	Description
Quota Management	
Expired Time After Activation	Enter the time duration that users are allowed to have Internet access after logging in.
Quota Policy Profile	Choose a policy profile to apply to web portal clients.
Web Portal Options	
HTTPS Redirection	If this option is selected, unauthenticated clients accessing HTTPS websites will be redirected to the login page, but the browser may

	alert the user of certificate errors. If this option is not selected, attempts to access to HTTPS website will time out without redirection.
Captive Portal Detection	If this option is selected, the web portal page is triggered automatically when an unauthenticated client tries to access the Internet. This function is not available when the Login Mode is Social Login , as the web portal page may not be shown correctly due to the limitations of the operating system's built-in Captive Portal Detection.
Landing Page After Authentication	
Fixed URL	Specifies the webpage that will be displayed after the user has successfully authenticated. The user will be redirected to the specified URL. This could be used for displaying advertisements to users, such as guests requesting wireless Internet access in a hotel.
User Requested URL	The user will be redirected to the URL they initially requested.
Bulletin Message	The message configured here will be briefly shown for a few seconds to the user. Default Message - This button is enabled when Bulletin Message is selected. Click to load the default text into the bulletin message textbox.
Applied Interfaces	
Subnet	The current Hotspot Web Portal profile will be in effect for the selected subnets.
WLAN	The current Hotspot Web Portal profile will be in effect for the selected WLAN SSIDs.
Finish	Click to complete the configuration.
Cancel	Click to abort the configuration process and return to the profile summary page.

VI-3-2 User Information

This page displays information of users accessing the Internet through the web portal. Clicking on a user link will open a new window that shows detailed information about that user.

VI-3-2-1 User Info

You may choose to limit the displayed user information by adding profile or login method filters.

Information about the user is shown under the Login Info section.

Devices used by the user are shown under the Devices section. To forcibly log out a device, select the checkbox in front of the device and click the Log Out Device button.

The Login History section shows the 10 most recent login sessions of the user.

VI-3-2-2 Database Setup

This page allows the user to configure settings for database on USB disk.

User Info	Database Setup
-----------	----------------

- Enable database
- Enable automatic database recovery
Backup database every hours min
- Enable sending user information to syslog

File Path : No USB Disk Detected

Database Usage : N/A

Clear User Info

Notification and Action when Storage Exceeded

- Notification
- Don't send notification
 - Send notification
 - Email Notification Object
 - SMS Notification Object
- Action
- Stop recording user information
 - Backup and clean up all user info, and start a new record

Advanced options

- Database Encryption
 1. Database encrypting is a irreversible process. Once enable Database Encryption, router will create a new encrypted database, which will not content the data from the non-encrypted database, and not able to change back to non-encrypted.
 2. Encryption mechanism may affect router performance when writing data.

OK

Available settings are explained as follows:

Item	Description
Enable database	Check the box to record user information on router's database. Before checking this box, insert a USB disk with adequate storage space, first.
Enable automatic database recovery	Check the box to enable the functionality of the database recovery on the USB disk. Backup database every... - Set the interval to backup the database.
Enable sending user information to syslog	Check the box to send user information to syslog.
File Path	If a USB disk has been inserted into the USB port of Vigor router, the file path will be shown in this area.
Database Usage	Display the usage and remaining space on the database. Clear User Info - The user information will be displayed on the page of User Info. You can delete the information by clicking this button.
Notification and Action when Storage Exceeded	
Notification	Don't send notification - Vigor router system will not send any notification to any recipient. Send notification - Vigor router system will not send a notification e-mail to specified recipient(s) that selected from Email Notification Object and SMS Notification Object .
Action	Stop recording user information - Vigor router system will stop to record the user information onto USB disk. Backup and clean up all user info, and start a new record - Vigor router system will backup all existed information on the USB disk onto the host and clean up the information from USB disk. Later, it will start a new record.
Advanced options	
Database Encryption	Select to have the router create a new encrypted database. Once this is done, you will not be able to revert to an unencrypted database.

VI-3-3 Quota Management

The system administrator can specify bandwidth and sessions quota which is only applicable to the web portal clients.

Settings configured in Quota Management will override the policies set in **Bandwidth Management>>Bandwidth Limit** and **Bandwidth Management>>Limit**.

Hotspot Web Portal >> Quota Management

Web Portal Bandwidth and Session Limit

The settings here will apply only to the web portal clients and will override the policies set in Bandwidth Management.

Bandwidth Limit

Session Limit

Quota Policy Profile

Index	Name	Expired Time after First Login	Device Allowed per Account	Reconnection Time Restriction	Bandwidth Limit	Session Limit
1	Default	0d 5h 0m	Unlimited	Unlimited	Unlimited	Unlimited
<input type="button" value="Add"/> (up to 20)						

Available settings are explained as follows:

Item	Description
Bandwidth Limit	Check the box to override the policy configured in Bandwidth Management>>Bandwidth Limit .
Session Limit	Check the box to override the policy configured in Bandwidth Management>>Session Limit .
Quota Policy Profile	Add - Create up to 20 policy profiles in such page.

To create a new quota policy profile, click Add to open the following page.

Hotspot Web Portal >> Management >> Quota Policy Profile 2

Profile Name

Account Validity

Expired Time After the First Login days hours min

Idle Timeout min

Device Control

Devices Allowed per account

Reconnection Time Restriction

At : everyday
Block the same user from reconnecting before the set time

hours min
Block the same user from reconnecting for the set period

Bandwidth and Session Limit

Bandwidth Limit

Download Limit Kbps Mbps

Upload Limit Kbps Mbps

Session Limit sessions

Available settings are explained as follows:

Item	Description
Profile Name	Enter a name for a new profile.
Account Validity	Set the duration for which the login is valid. Expired Time After the First Login - Sets the days, hours, and minutes. After the login has expired, Vigor router will block the client from accessing the network/Internet. Idle Timeout - When this option is selected, Vigor router will terminate the network connection if there is no activity from the user after the specified idle time has passed.
Device Control	Set the maximum number of devices that can be connected for each account, and the time restriction for the client accessing Internet via the web portal. Devices Allowed per account - Use the drop-down list to select the maximum number of devices that can be connected to the network using the same account. Reconnection Time Restriction - Blocks the account from being used to connect devices to the network in one of two ways: <ul style="list-style-type: none"> ● At ... Everyday - After the login expires, the account cannot be used to connect devices to the network until the set time of day. ● Hours.. min - After the login expires, the account cannot be used to connect devices to the network for a set period of time.
Bandwidth and	Bandwidth Limit - Check the box to configure bandwidth limit for

Session Limit	web portal client. <ul style="list-style-type: none">● Download/Upload Limits - Set the maximum upload and download speeds. Session Limit - Check the box to configure a maximum session limit for web portal clients.
----------------------	--

After finishing all the settings here, please click **OK** to save the configuration.

VI-4 User Management

User Management is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password. Instead of managing with IP address/MAC address, User Management function manages hosts with user account. Network administrator can give different firewall policies or rules for different hosts with different User Management accounts. This is more flexible and convenient for network management. Not only offering the basic checking for Internet access, User Management also provides additional firewall rules, e.g. CSM checking for protecting hosts.

Info

Filter rules configured under Firewall usually are applied to the host (the one that the router installed) only. With user management, the rules can be applied to every user connected to the router with customized profiles.

Web User Interface

- Firewall
- User Management**
- General Setup
- User Profile
- User Group
- User Online Status
- Objects Settings

VI-4-1 General Setup

General Setup can determine the standard (rule-based or user-based) for the users controlled by User Management. The mode (standard) selected here will influence the contents of the filter rule(s) applied to every user.

User Management >> General Setup

General Setup

Mode Selection:

Rule-Based is a management method based on IP address. Administrator may set different firewall rules to different IP address.

User-Based is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Authentication page:

Web Authentication: HTTPS HTTP

Login Page Greeting

Display IP address on the dialog box pops up after successful login.

Landing page:

(Max 255 characters) [Preview](#) | [Set to Factory Default](#) |

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

Available settings are explained as follows:

Item	Description
Common Settings	
Enable this account	Check this box to enable such user profile.
Username	Type a name for such user profile (e.g., LAN_User_Group_1, WLAN_User_Group_A, WLAN_User_Group_B, etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to Enter the User Name specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router. However the accessing operation will be restricted with the conditions configured in this user profile. The maximum length of the name you can set is 24 characters.
Password	Type a password for such profile (e.g., lug123, wug123, wug456, etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to Enter the password specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router with the limitation configured in this user profile.

	The maximum length of the password you can set is 24 characters.
Confirm Password	Enter the password again for confirmation.
External Service Authentication	<p>The router will authenticate the dial-in user by itself or by external service such as LDAP server or Radius server or TACACS+ server. If LDAP, Radius or TACACS+ is selected here, it is not necessary to configure the password setting above.</p> 
Login Settings	
Allow Authentication via	<p>Any user (from LAN side or WLAN side) tries to connect to Internet via Vigor router must be authenticated by the router first. There are three ways offered by the router for the user to choose for authentication.</p> <p>Web - If it is selected, the user can Enter the URL of the router from any browser. Then, a login window will be popped up and ask the user to Enter the user name and password for authentication. If succeed, a Welcome Message (configured in User Management >> General Setup) will be displayed. After authentication, the destination URL (if requested by the user) will be guided automatically by the router.</p> <p>Alert Tool - If it is selected, the user can open Alert Tool and Enter the user name and password for authentication. A window with remaining time of connection for such user will be displayed. Next, the user can access Internet through any browser on Windows. Note that Alert Tool can be downloaded from DrayTek web site.</p> <p>Telnet - If it is selected, the user can use Telnet command to perform the authentication job.</p>
Show Landing Page After Login	<p>When a user tries to access into the web user interface of Vigor router series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in User Management>>General Setup.</p> <p>Check this box to enable such function.</p>
Idle Timeout	If the user is idle over the limitation of the timer, the network connection will be stopped for such user . By default, the Idle Timeout is set to 10 minutes.
Auto Logout After	Such account will be forced to logout after a certain time set here.
Pop up Time-Tracking Window	If such function is enabled, a pop up window will be displayed on the screen with time remaining for connection if Idle Timeout is set. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection.
Login Permission Schedule	You can Enter four sets of time schedule for your request. All the schedules can be set previously in Applications >>

	Schedule web page and you can use the number that you have set in that web page.
Policy	
Max. Login Devices	Such profile can be used by many users. You can set the limitation for the number of users accessing Internet with the conditions of such profile. The default setting is 0 which means no limitation in the number of users.
Enable Time Quota	<p>Time quota means the total connection time allowed by the router for the user with such profile. Check the box to enable the function of time quota. The first box displays the remaining time of the network connection. The second box allows to Enter the number of time (unit is minute) which is available for the user (using such profile) to access Internet.</p> <p><input type="button" value="+"/> - Click this box to set and increase the time quota for such profile.</p> <p><input type="button" value="-"/> - Click this box to decrease the time quota for such profile.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: A dialog will be popped up to notify how many time remained when a user accesses into Internet through Vigor router successfully.</p>  <p>When the time is up, all the connection jobs including network, IM, social media, facebook, and etc. will be terminated.</p> </div>
Enable Data Quota	<p>Data Quota means the total amount for data transmission allowed for the user. The unit is MB/GB.</p> <p><input type="button" value="+"/> - Click this box to set and increase the data quota for such profile.</p> <p><input type="button" value="-"/> - Click this box to decrease the data quota for such profile.</p>
Reset quota automatically	<p>Check the box to set default time quota and data quota for such profile. Vigor router will reset the quota automatically according to the factory quota settings.</p> <p>Time Limit - Enter the value for the time manually.</p> <p>Data Limit - Enter the value for the data manually.</p> <p>Login Permission Schedule Ends - When the scheduling time is up, the router will reset the quota with user-defined time/data values automatically.</p> <p>Schedule - The router will reset the quota with user-defined time/data values at the starting time configured in the</p>

	selected schedule profile.
Other Services	
Log	<p>Time of login/log out, block/unblock for the user(s) can be sent to and displayed in Syslog. Please choose any one of the log items to take down relational records for the user(s).</p> 

After finishing all the settings here, please click **OK** to save the configuration.

VI-4-3 User Group

This page allows you to bind several user profiles into one group. These groups will be used in Firewall>>General Setup as part of filter rules.

User Management >> User Group

User Group Table: | [Set to Factory Default](#) |

 5-WLAN_User_Group_B

Selected User Objects(Max 32 Objects)

(Empty)

Available settings are explained as follows:

Item	Description
Name	Type a name for this user group.
Available User Objects	You can gather user profiles (objects) from User Profile page within one user group. All the available user objects that you have created will be shown in this box. Notice that user object, Admin and Dial-In User are factory settings. User defined profiles will be numbered with 3, 4, 5 and so on.

Selected Keyword Objects	Click  button to add the selected user objects in this box.
--------------------------	--

After finishing all the settings here, please click OK to save the configuration.

VI-4-4 User Online Status

This page displays the user(s) connected to the router and refreshes the connection status in an interval of several seconds.

User Management >> User Online Status

Current Time : 01-03 01:04:46 Refresh Seconds: Page: | [All Users](#) | | [Online Users](#) | | [Refresh](#) |

Index	User	IP Address	Profile	Last Login Time	Expired Time	Data Quota	Idle Time	Action
1	admin	192.168.1.5	admin	01-03 00:05:58	Unlimited	Unlimited	Unlimited	Block Logout Delete

Note:

1. Please click "IP Address" to view all online users.
2. Dial-in User profiles are linked to VPN clients and therefore cannot be logged-out or deleted while connecting.

Total Number : 1

Available settings are explained as follows:

Item	Description
Refresh Seconds	Use the drop down list to choose the time interval of refreshing data flow that will be done by the system automatically.
Refresh	Click this link to refresh this page manually.
Index	Display the number of the data flow.
User	Display the users which connect to Vigor router currently. You can click the link under the username to open the user profile setting page for that user.
IP Address	Display the IP address of the device.
Profile	Display the authority of the account.
Last Login Time	Display the login time that such user connects to the router last time.
Expired Time	Display the expired time of the network connection for the user.
Data Quota	Display the quota for data transmission.
Idle Time	Display the idle timeout setting for such profile.

Action	Block - can avoid specified user accessing into Internet. Unblock - allow the user to access into Internet. Logout - the user will be logged out forcefully.
---------------	---

Application Notes

A-1 How to authenticate clients via User Management

Before using the function of User Management, please make sure **User-Based** has been selected as the Mode in the User Management>>General Setup page.

User Management >> General Setup

General Setup

Mode Selection:

- Rule-Based** is a management method based on IP address. Administrator may set different firewall rules to different IP address.
- User-Based** is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Notice for User-Based mode:

- In User-Based mode, **Active Rules** in Firewall will be applied to all LAN clients, packets that matches the Active Rules will be blocked or pass immediately, no user authentication is required.
- Only **Inactive Rules** in Firewall can be set for individual user profile. In User-Based mode, packets that do not match Active Rules will need authentication, and the Inactive Rule applied to the specific user profile will then take effect.

With User Management authentication function, before a valid username and password have been correctly supplied, a particular client will not be allowed to access Internet through the router. There are three ways for authentication: **Web**, **Telnet** and **Alert Tool**.

User Management >> User Profile

Authentication via Web

- If a LAN client who hasn't passed the authentication opens an external web site in his browser, he will be redirected to the router's Web authentication interface first. Then, the client is trying to access <http://www.draytek.com> and but brought to the Vigor router. Since this is an SSL connection, some web browsers will display warning messages.
 - With Microsoft Internet Explorer, you may get the following warning message. Please press **Continue to this website (not recommended)**.

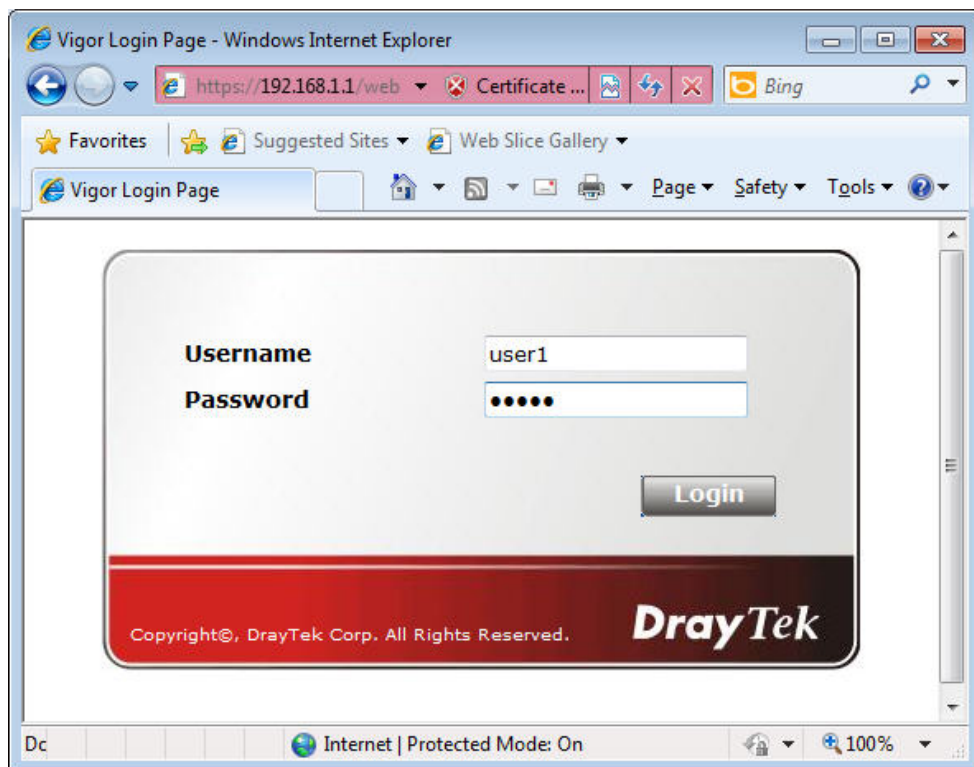

- With Mozilla Firefox, you may get the following warning message. Select **I Understand the Risks**.

- With Chrome browser, you may get the following warning. Click Proceed anyway.

After that, the web authentication window will appear. Input the user name and the password for your account (defined in User Management) and click Login.

If the authentication is successful, the client will be redirected to the original web site that he tried to access. In this example, it is <http://www.draytek.com>. Furthermore, you will get a popped up window as the following. Then you can access the Internet.

Note, if you block the web browser to pop up any window, you will not see such window. If the authentication is failed, you will get the error message, **The username or password you entered is incorrect.** Please login again.

- In above description, you access an external web site to trigger the authentication. You may also directly access the router's Web UI for authentication. Both HTTP and HTTPS are supported, for example <http://192.168.1.1> or <https://192.168.1.1> . Replace 192.168.1.1 with your router's real IP address, and add the port number if the default management port has been modified.

If the authentication is successful, you will get the **Welcome Message** that is set in the **User Management >> General Setup** page.

General Setup

Mode Selection:

Rule-Based is a management method based on IP address. Administrator may set different firewall rules to different IP address.

User-Based is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Notice for User-Based mode:

- In User-Based mode, **Active Rules** in Firewall will be applied to all LAN clients, packets that matches the Active Rules will be blocked or pass immediately, no user authentication is required.
- Only **Inactive Rules** in Firewall can be set for individual user profile. In User-Based mode, packets that do not match Active Rules will need authentication, and the Inactive Rule applied to the specific user profile will then take effect.

Authentication page:

Web Authentication: HTTPS HTTP

Login Page Greeting

Display IP address on the dialog box pops up after successful login.

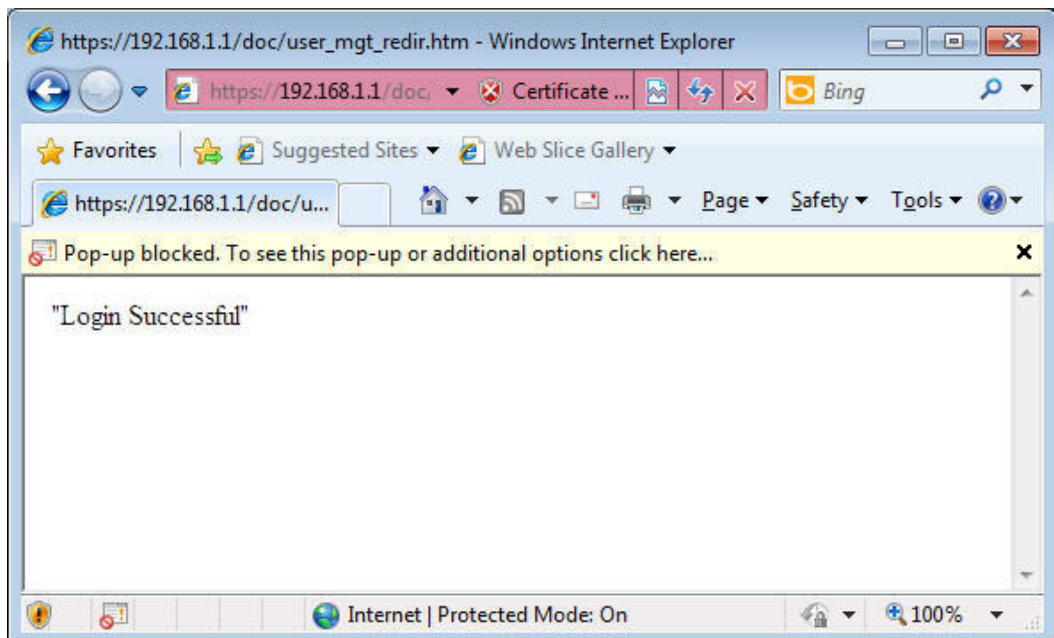

Landing page:

(Max 255 characters) [Preview](#) [Set to Factory Default](#)

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

OK Clear Cancel

With the default setup `<body stats=1><script language='javascript'> window.location='http://www.draytek.com'</script></body>`, you will be redirected to `http://www.draytek.com`. You may change it if you want. For example, you will get the following welcome message if you enter Login Successful in the Welcome Message table.

Also you will get a Tracking Window if you don't block the pop-up window.

- Don't setup a user profile in User Management and a VPN Remote Dial-in user profile with the same Username. Otherwise, you may get unexpected result. It is because the VPN Remote Dial-in User profiles can be extended to the User profiles in User Management for authentication.

There are two different behaviors when a User Management account and a VPN profile share the same Username:

- If **SSL Tunnel** or **SSL Web Proxy** is enabled in the VPN profile, the user profile in User Management will always be invalid for Web authentication. For example, if you create a user profile in User Management with **chaochen/test** as username/password, while a VPN Remote Dial-in user profile with the same username "chaochen" but a different password "1234", you will always get error message **The username or password you entered is incorrect** when you use **chaochen/test** via Web to do authentication.

VPN and Remote Access >> Remote Dial-in User

Index No. 1

User account and Authentication <input checked="" type="checkbox"/> Enable this account Idle Timeout <input type="text" value="300"/> second(s)	Username <input type="text" value="chaochen"/> Password <input type="password" value="....."/> <input type="checkbox"/> Enable Mobile One-Time Passwords(mOTP) PIN <input type="text"/> Code <input type="text"/> Secret <input type="text"/>

- If **SSL Tunnel** or **SSL Web Proxy** is disabled in the VPN profile, a User Management account and a remote dial-in VPN profile can use the same Username, even with different passwords. However, we recommend you to use different usernames for different user profiles in User Management and VPN profiles.

Authentication via Telnet

The LAN clients can also authenticate their accounts via telnet.

1. Telnet to the router's LAN IP address and input the account name for the authentication:

2. Enter the password for authentication and press Enter. The message User login successful will be displayed with the expired time (if configured).

Info

Here expired time is "Unlimited" means the Time Quota function is not enabled for this account. After login, this account will not be expired until it is logout.

3. In the Web interface of router, the configuration page of Time Quota is shown as below.

User Management >> User Profile

Profile Index 3

User login successful, expired time is "12-23 10:21:33".
```

After you run out the available time, you can't use this account any more until the administrator manually adds additional time for you.

Authentication via VigorPro Alert Notice Tool

Authentication via Web or Telnet is convenient for users; however, it has some limitations. The most advantage with VigorPro Alert Notice Tool to operate the authentication is the ability to do **auto login**. If the timeout value set on the router for the user account has been reached, the router will stop the client computer from accessing the Internet until it does an authentication again. Authentication via VigorPro Alert Notice Tool allows user to setup the re-authentication interval so that the utility will send authentication requests periodically. This will keep the client hosts from having to manually authenticate again and again.

The configuration of the VigorPro Alert Notice Tool is as follows:

1. Click **Authenticate Now!!** to start the authentication immediately.

2. You may get the VigorPro Alert Notice Tool from the following link:
<http://www.draytek.com/user/SupportDLUtility.php>

Info 1

Any modification to the Firewall policy will break down the connections of all current users. They all have to authenticate again for Internet access.

Info 2

The administrator may check the current users from **User Online Status** page.

User Management >> User Online Status

A-2 How to use Landing Page Feature

Landing Page is a special feature configured under User Management. It can specify the message, content to be seen or specify which website to be accessed into when users try to access into the Internet by passing the authentication. Here, we take Vigor2915 series router as an example.

Example 1 : Users can see the message for landing page after logging into Internet successfully

1. Open the web user interface of Vigor2915.
2. Open User Management -> General Setup to get the following page. In the field of Landing Page, please Enter the words of "Login Success". Please note that the maximum number of characters to be typed here is 255.
3. Now you can enable the Landing Page function. Open User Management -> User Profile and click one of the index number (e.g., index number 3) links.

User Management >> User Profile

User Profile Table

Profile	Name
1.	admin
2.	Dial-In User
3.	
4.	

4. In the following page, check the box of Landing page and click OK to save the settings.

VI-5 Central Management (External Devices)

Vigor router can be used to connect with many types of external devices. In order to control or manage the external devices conveniently, open **External Devices** to make detailed configuration.

VI-5-1 All Devices

Central Management >> External Device

- External Device Syslog
 External Device Auto Discovery

External Devices Connected

| [Refresh](#) |

Below shows available devices that connected externally:

[On Line](#) , Connection Uptime:00:07:19

IP Address:192.168.1.10:80

For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device properly. Click the **Clear** button to Clear the off-line information and account information.

Available settings are explained as follows:

Item	Description
External Device Syslog	Check this box to display information of the detected device on Syslog.
External Device Auto Discovery	Check this box to detect the external device automatically and display on this page.

From this web page, check the box of **External Device Auto Discovery**. Later, all the available devices will be displayed in this page with icons and corresponding information. You can change the device name if required or remove the information for off-line device whenever you want.

External Device >> All Devices

- External Device Syslog
- External Device Auto Discovery

External Devices Connected

Below shows available devices that connected externally:

On Line	VigorAP900, VigorAP900, Connection Uptime: 18:15:27	<input type="button" value="Account"/>	<input type="button" value="Clear"/>
	IP Address: 10.28.60.12		
On Line	P2261, Connection Uptime: 18:15:17	<input type="button" value="Account"/>	<input type="button" value="Clear"/>
	IP Address: 192.168.1.226		

For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device device properly. Click the **Clear** button to Clear the off-line information and account information.

When you finished the configuration, click **OK** to save it.

Info

Only DrayTek products can be detected by this function.

This page is left blank.

Part VII Others

Objects Settings

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

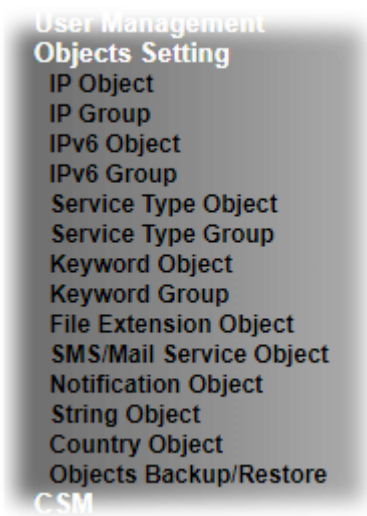

USB

USB device connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications.

VII-1 Objects Settings

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

Web User Interface

VII-1-1 IP Object

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group that can apply it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

You can set up to 192 sets of IP Objects with different conditions.

Objects Setting >> IP Object

[Objects Backup/Restore](#)

Available settings are explained as follows:

Item	Description
View	Use the drop down list to choose a type (Single Address, Range Address, Subnet Address, Mac Address or all) that IP object with the selected type will be shown on this page.
Set to Factory Default	Clear all profiles.
Search	Type a string of the IP object that you want to search.
Index	Display the profile number that you can configure.
Name	Display the name of the object profile.
Address	Display the IP address configured for the object profile.
Objects Backup/Restore	Click it to backup or restore the IP object.

To set a new profile, please do the steps listed below:

1. Click the number (e.g., #1) under Index column for configuration in details.
2. The configuration page will be shown as follows:

Objects Setting >> IP Object

Profile Index : 1

Name:	<input type="text" value="RD Department"/>
Interface:	<input type="text" value="Any"/>
Address Type:	<input type="text" value="Range Address"/>
Mac Address:	<input type="text" value="00 : 00 : 00 : 00 : 00 : 00"/>
Start IP Address:	<input type="text" value="0.0.0.0"/> <input type="button" value="Select"/>
End IP Address:	<input type="text" value="0.0.0.0"/> <input type="button" value="Select"/>
Subnet Mask:	<input type="text" value="255.255.255.254 / 31"/>
Invert Selection:	<input type="checkbox"/>

[Next >>](#)

Available settings are explained as follows:

Item	Description
Name	Type a name for this profile. Maximum 15 characters are allowed.
Interface	Choose a proper interface. For example, the Direction setting in Edit Filter Rule will ask you specify IP or IP range for WAN or LAN/RT/VPN or any IP address. If you choose LAN/RT/VPN as the Interface here, and choose LAN/RT/VPN as the direction setting in Edit Filter Rule , then all the IP addresses specified with LAN/RT/VPN interface will be opened for you to choose in Edit Filter Rule page.
Address Type	Determine the address type for the IP address. Select Single Address if this object contains one IP address only. Select Range Address if this object contains several IPs within a range. Select Subnet Address if this object contains one subnet for IP address.

	Select Any Address if this object contains any IP address. Select Mac Address if this object contains Mac address.
MAC Address	Enter the MAC address of the network card which will be controlled.
Start IP Address	Enter the start IP address for Single Address type.
End IP Address	Enter the end IP address if the Range Address type is selected.
Subnet Mask	Enter the subnet mask if the Subnet Address type is selected.
Invert Selection	If it is checked, all the IP addresses except the ones listed above will be applied later while it is chosen.

4. After finishing all the settings here, please click **OK** to save the configuration. Below is an example of IP objects settings.

Objects Setting >> IP Object

[Objects Backup/Restore](#)

Available settings are explained as follows:

Item	Description
Set to Factory Default	Clear all profiles.
Index	Display the profile number that you can configure.
Name	Display the name of the object profile.
Objects Backup/Restore	Click it to backup or restore the service type object.

To set a new profile, please do the steps listed below:

1. Click the number (e.g., #1) under Index column for configuration in details.
2. The configuration page will be shown as follows:

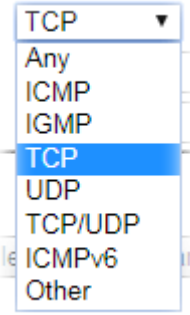

Objects Setting >> Service Type Object Setup

Profile Index : 1

Name	<input type="text" value="www"/>
Protocol	TCP <input type="text" value="6"/>
Source Port	= <input type="text" value="1"/> ~ <input type="text" value="65535"/>
Destination Port	= <input type="text" value="1"/> ~ <input type="text" value="65535"/>

[Next](#) >>

Available settings are explained as follows:

Item	Description
Name	Type a name for this profile. Maximum 15 characters are allowed.
Protocol	Specify the protocol(s) which this profile will apply to. 
Source/Destination Port	Source Port and the Destination Port columns are available for TCP/UDP protocol. It can be ignored for other protocols. The filter rule will filter out any port number. (=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this profile. (!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type. (>) - the port number greater than this value is available. (<) - the port number less than this value is available for this profile.

- After finishing all the settings, please click **OK** to save the configuration.

4.			
5.			
6.			
7.			
8.			
9.	Custom 1		
10.	Custom 2		

[Objects Backup/Restore](#)

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Index	Display the profile number that you can configure.
Profile	Display the name for such SMS profile.
SMS Provider	Display the service provider which offers SMS service.
Objects Backup/Restore	Click it to backup or restore the SMS service object.

To set a new profile, please do the steps listed below:

1. Click the **SMS Provider** tab, and click the number (e.g., #1) under Index column for configuration in details.

[Object Settings >> SMS / Mail Service Object](#)

SMS Provider		Mail Server
Index	Profile Name	
1.		
2.		
3.		
4.		

- The configuration page will be shown as follows:

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	<input type="text" value="Line_down"/>
Service Provider	<input type="text" value="kotsms.com.tw (TW)"/>
Username	<input type="text" value="line1"/>
Password	<input type="password" value="***"/>
Quota	<input type="text" value="10"/>
Sending Interval	<input type="text" value="3"/> (seconds)

Note:

- Only one message can be sent during the "Sending Interval" time.
- If the "Sending Interval" was set to 0, there will be no limitation.

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for such SMS profile. The maximum length of the name you can set is 31 characters.
Service Provider	Use the drop down list to specify the service provider which offers SMS service.
Username	Type a user name that the sender can use to register to selected SMS provider. The maximum length of the name you can set is 31 characters.
Password	Type a password that the sender can use to register to selected SMS provider. The maximum length of the password you can set is 31 characters.
Quota	Enter the number of the credit that you purchase from the service provider chosen above. Note that one credit equals to one SMS text message on the standard route.
Sending Interval	To avoid quota being exhausted soon, type time interval for sending the SMS.

- After finishing all the settings here, please click OK to save the configuration.

Object Settings >> SMS / Mail Service Object

Backup the current IP Objects with a CSV file

Download the default CSV template to edit

Restore

未選擇任何檔案

Note:

For better compatibility, it's suggested to edit IP Objects with the provided default CSV template.

Available settings are explained as follows:

Item	Description
Backup	Usually, the IP objects can be created one by one through the web page of Objects>>IP Object. However, to a user

	<p>who wants to save more time in bulk creating IP objects, a quick method is offered by Vigor router to modify the IP objects with a single file, a CSV file.</p> <p>All of the IP objects (or the template) can be exported as a file by clicking Download. Then the user can open the CSV file through Microsoft Excel and modify all the IP objects at the same time.</p> <p>Backup the current IP Objects with a CSV file - Click it to backup current IP objects as a CSV file. Such file can be restored for future use.</p> <p>Download the default CSV template to edit - After clicking it, press Download to store the default CSM template (a table without any input data) to your hard disk.</p> <p>Download - Download the CSV file from Vigor router and store in your hard disk.</p>
Restore	<p>Select - Click it to specify a predefined CSV file.</p> <p>Restore - Import the selected CSV file onto Vigor router.</p>

Application Notes

A-1 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open Object Settings>>SMS/Mail Server Object to get the following page.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server		Set to Factory Default
Index	Profile Name	SMS Provider	
1.		kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, Enter the username and password and set the quota that the router can send the message out.

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	Local number
Service Provider	kotsms.com.tw (TW) ▼
Username	abc5026
Password	*****
Quota	10
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

OK Clear Cancel

- After finished the settings, click OK to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Objects Setting >> SMS / Mail Service Object

[Objects Backup/Restore](#)

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, Enter the phone number in the field of Recipient (the one who will receive the SMS).

Applications >> SMS / Mail Alert Service

| [Set to Factory Default](#) |

SMS Alert		Mail Alert		Schedule(1-15)		
Index	Enable	SMS Provider	Recipient Number	Notify Profile		
1	<input checked="" type="checkbox"/>	1 - Local number ▼	0912345678	1 - WAN_Notify ▼		
2	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
3	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
4	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
5	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
6	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
7	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
8	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
9	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		
10	<input type="checkbox"/>	1 - Local number ▼		1 - WAN_Notify ▼		

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, Enter the URL string of the SMS provider and Enter the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

VII-2 USB Application

USB device connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications. After setting the configuration in **USB Application**, you can Enter the IP address of the Vigor router and username/password created in **USB Application>>USB User Management** on the client software. Then, the client can use the FTP site (USB storage disk) or share the SMB service through Vigor router.

Info

USB ports on Vigor router are allowed to connect to USB modem. Models of the modems supported by Vigor router can be seen from **USB Application>>Modem Support List**. For network connection via USB modem, refer to **WAN>>Internet Access** and **WAN>>General Setup** for detailed information.

VII-2-1 USB General Settings

This page will determine the number of concurrent FTP connection, default charset for FTP server and enable SMB service. At present, the Vigor router can support USB storage disk with formats of FAT16 and FAT32 only. Therefore, before connecting the USB storage disk into the Vigor router, please make sure the memory format for the USB storage disk is FAT16 or FAT32. It is recommended for you to use FAT32 for viewing the filename completely (FAT16 cannot support long filename).

USB Application >> USB General Settings

USB General Settings

General Settings	
Simultaneous FTP Connections	<input type="text" value="5"/> (Maximum 6)
Default Charset	<input type="text" value="English"/> ▼
SMB File Sharing Service (Network Neighborhood)	
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
Access Mode	
<input checked="" type="radio"/> LAN Only <input type="radio"/> LAN And WAN	
NetBios Name Service	
Workgroup Name	<input type="text" value="WORKGROUP"/>
Host Name	<input type="text" value="Vigor"/>
Printer Server	
<input checked="" type="radio"/> Enable <input type="radio"/> Disable	

Note:

1. If character set is set to "English", only English long file name is supported.
2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; : " < > * + = / \ | ?.

OK

Available settings are explained as follows:

Item	Description
General Settings	Simultaneous FTP Connections - This field is used to specify the quantity of the FTP sessions. The router allows up to 6

	FTP sessions connecting to USB storage disk at one time. Default Charset - At present, Vigor router supports four types of character sets. Default Charset is for English based file name.
SMB File Sharing Service	Click Enable to invoke SMB service (file sharing) via the router.
Access Mode	LAN Only - Users coming from internet cannot connect to the SMB server of the router. LAN And WAN - Both LAN and WAN users can access SMB server of the router.
NetBios Name Service	For the NetBios service of USB storage disk, you have to specify a workgroup name and a host name. A workgroup name must not be the same as the host name. The workgroup name can have as many as 15 characters and the host name can have as many as 23 characters. Both them cannot contain any of the following--- ; : " < > * + = \ ?. Workgroup Name - Type a name for the workgroup. Host Name - Enter the host name for the router.
Printer Server	Enable - Click it to make Vigor router act as a printer server (with USB printer attached).

After finishing all the settings here, please click OK to save the configuration.

VII-2-2 USB User Management

This page allows you to set profiles for FTP/SMB users. Any user who wants to access into the USB storage disk must Enter the same username and password configured in this page. Before adding or modifying settings in this page, please insert a USB storage disk first. Otherwise, an error message will appear to warn you.

USB Application >> USB User Management

USB Application >> USB User Management

Profile Index: 1

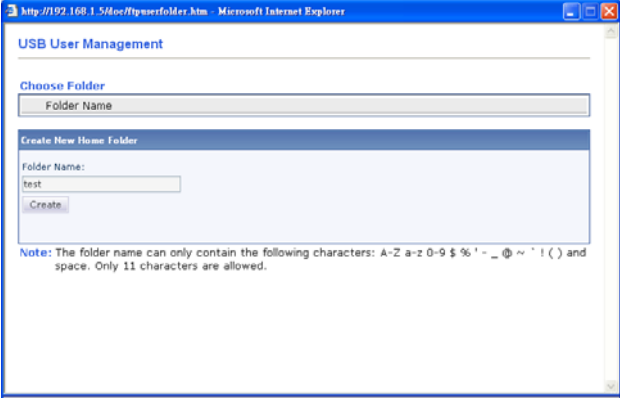

<input checked="" type="checkbox"/> Enable	
Username	<input type="text" value="Max: 11 characters"/>
Password	<input type="text" value="Max: 11 characters"/>
Confirm Password	<input type="text"/>
Home Folder	<input type="text"/> 
Access Rule	
File	<input type="checkbox"/> Read <input type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

Note:

The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () and space.

Available settings are explained as follows:

Item	Description
Enable	Check it to activate this profile (account) for FTP service or SMB file sharing service. Later, the user can use the username specified in this page to login into FTP server.
Username	Enter the username for FTP/SMB users for accessing into FTP server (USB storage disk). Be aware that users cannot access into USB storage disk in anonymity. Later, you can open FTP client software and Enter the username specified here for accessing into USB storage disk. The length of the name is limited to 11 characters. Note: "Admin" could not be typed here as username, for the word is specified for accessing into web pages of Vigor router only. Also, it is reserved for FTP firmware upgrade usage. Note: FTP Passive mode is not supported by Vigor Router. Please disable the mode on the FTP client.
Password	Enter the password for FTP/SMB users for accessing FTP server. Later, you can open FTP client software and Enter the password specified here for accessing into USB storage disk. The length of the password is limited to 11 characters.
Confirm Password	Enter the password again to make confirmation.
Home Folder	It determines the folder for the client to access into. The user can enter a directory name in this field. Then, after clicking OK , the router will create the specific/new folder in the USB storage disk. In addition, if the user types "/" here, he/she can access into all of the disk folders and files in USB storage disk. Note: When write protect status for the USB storage disk is ON , you cannot type any new folder name in this field. Only "/" can be used in such case. You can click  to open the following dialog to add any new folder which can be specified as the Home Folder.

	
<p>Access Rule</p>	<p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p>File - Check the items (Read, Write and Delete) for such profile.</p> <p>Directory -Check the items (List, Create and Remove) for such profile.</p>

Before you click OK, you have to insert a USB storage disk into the USB interface of the Vigor router. Otherwise, you cannot save the configuration.

VII-2-3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

USB Application >> File Explorer

Note: The folder can not be deleted when it is not empty.

Available settings are explained as follows:

Item	Description
 Refresh	Click this icon to refresh files list.
 Back	Click this icon to return to the upper directory.
 Create	Click this icon to add a new folder.
Current Path	Display current folder.

Upload	Click this button to upload the selected file to the USB storage disk. The uploaded file in the USB diskette can be shared for other user through FTP.
---------------	--

VII-2-4 USB Device Status

This page is to monitor the status for USB device connecting to Vigor router. . In addition, the status of the USB modem or USB printer or USB sensor connecting to Vigor router can be checked from such page. If you want to remove the storage disk from USB port in router, please click **Disconnect USB Disk** first. And then, remove the USB device later.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status: No Disk Connected				<input type="button" value="Disconnect USB Disk"/>
Disk Capacity: 0 MB				
Free Capacity: 0 MB Refresh				
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Available settings are explained as follows:

Item	Description
Connection Status	If there is no USB device connected to Vigor router, "No Disk Connected" will be shown here.
Disk Capacity	It displays the total capacity of the USB storage disk.
Free Capacity	It displays the free space of the USB storage disk. Click Refresh at any time to get new status for free capacity.
Index	It displays the number of the client which connects to FTP server.
IP Address	It displays the IP address of the user's host which connects to the FTP server.
Username	It displays the username that user uses to login to the FTP server.

When you insert USB device into the Vigor router, the system will start to find out such device within several seconds.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status: Disk Connected				Disconnect USB Disk
Write Protect Status: No				
Disk Capacity: 2009 MB				
Free Capacity: 925 MB Refresh				
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	
Note: If the write protect switch of USB disk is turned on, the USB disk is in READ-ONLY mode. No data can be written to it.				

VII-2-5 Temperature Sensor

A USB Thermometer is now available. It complements your installed DrayTek router installations which will help you monitor the server or data communications room environment and notify you if the server room or data communications room is overheating.

During summer in particular, it is important to ensure that your server or data communications equipment are not overheating due to cooling system failures.

The inclusion of a USB thermometer in compatible Vigor routers will continuously monitor the temperature of its environment. When a pre-determined threshold is reached you will be alerted by either an email or SMS so you can undertake appropriate action.

Temperature Sensor Settings

USB Application >> Temperature Sensor Setting

Temperature Chart	Temperature Sensor Settings
Display Settings	
Temperature Calibration	<input type="text" value="0.00"/>
Temperature Unit	<input checked="" type="radio"/> Celsius <input type="radio"/> Fahrenheit
Alarm Settings	
<input type="checkbox"/> Enable Syslog Alarm	
Upper temperature limit	<input type="text" value="30.00"/>
Lower temperature limit	<input type="text" value="18.00"/>

Note:

Set 1) [Notification Object](#), 2) [SMS / Mail Service Object](#), 3) [SMS / Mail Alert Service](#) to make Vigor router send alert when the temperature reaches the limit.

OK

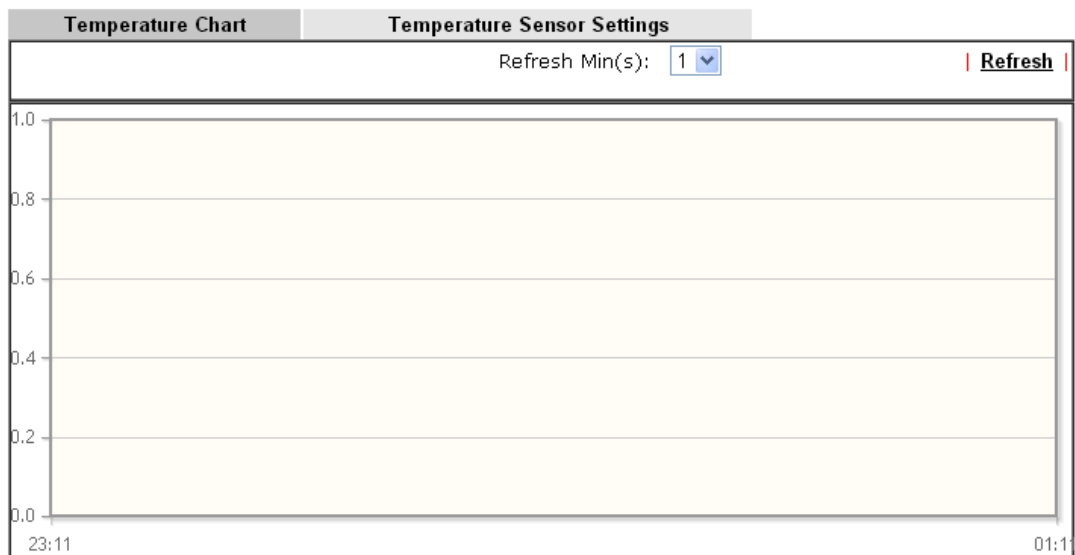

Available settings are explained as follows:

Item	Description
Display Settings	<p>Temperature Calibration - Type a value used for correcting the temperature error.</p> <p>Temperature Unit - Choose the display unit of the temperature. There are two types for you to choose.</p>
Alarm Settings	<p>Enable Syslog Alarm - The temperature log will be recorded on Syslog if it is enabled.</p> <p>Upper temperature limit/Lower temperature limit - Enter the upper limit and lower limit for the system to send out temperature alert.</p>

VII-2-6 Modem Support List

Such page provides the information about the brand name and model name of the USB modems which are supported by Vigor router.

USB Application >> Modem Support List

The following compatibility test lists 3.5G/LTE modems **supported by Vigor router under certain environment or countries**. If the LTE modem you have is on the list but cannot work properly, please write an e-mail to support@draytek.com or consult your dealer for further information.

Brand	Model	LTE	Access Mode	Status
Aiko	Aiko 83D		PPP	Y
Alcatel	Alcatel L100V		DHCP	Y
	Alcatel L100V		PPP	Y
	Alcatel L800		DHCP	Y
	Alcatel W100		DHCP	Y
	Alcatel W100		PPP	Y
	Alcatel W800		DHCP	M
	Alcatel Y855		DHCP	Y
BandRich	Bandlux C170		PPP	Y
	Bandlux C270		PPP	Y
	Bandlux C321		PPP	Y
	Bandlux C330		PPP	Y
	Bandlux C502		PPP	Y
D-Link	<u>D_LINK DWM156</u>		DHCP	M
	<u>D_LINK DWM222</u>		PPP	Y

VII-2-7 SMB Client Support List

SMB Client Support List provides the test status information for applications with file sharing operated under different platforms.

USB Application >> SMB Client Support List

The following compatibility test lists suggested SMB clients supported by Vigor router.

Platform	Application	Status
Microsoft® Windows® XP	Built in	I
Microsoft® Windows Vista™	Built in	Y
Microsoft® Windows® 7	Built in	Y
Microsoft® Windows® 8	Built in	M
Microsoft® Windows® 10	Built in	Y
OS X® 10.7.5	Built in	Y
OS X® 10.10	Built in	Y
Ubuntu 14.04	Built in	Y
Android™	AndSMB	Y
Android™	ES File Explorer	Y
Android™	File Expert	Y
Android™	File Manager	Y
Android™	Solid Explorer	Y
Android™	SharesFinder	Y
iOS	eXPlayer	Y
iOS	nPlayer	Y

Y: Tested and is supported.

I: Supported but has some issue.

M: Has not been tested but might be supported.

Application Notes

A-1 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening **USB Application>>File Explorer**. If it is necessary for you to delete, copy files on the device or write, paste files to the device, it must be done through SMB server or FTP server.

SMB service is based on the original USB FTP service. You will need to setup USB FTP first. We would like to give brief instructions on USB FTP setup here.

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

USB Application >> USB Disk Status

USB Mass Storage Device Status

Connection Status: **Disk Connected** Disconnect USB Disk

Write Protect Status: No

Disk Capacity: 2009 MB

USB Disk Users Connected | Refresh |

Index	Service	IP Address(Port)	Username
-------	---------	------------------	----------

Note: If the write protect switch of USB disk is turned on, the USB disk is in READ-ONLY mode. No data can be written to it.

2. Then, please open **USB Application >> USB General Settings** to enable SMB service.

USB Application >> USB General Settings

USB General Settings

General Settings

Simultaneous FTP Connections: (Maximum 6)

Default Charset:

SMB File Sharing Service (Network Neighborhood)

Enable Disable

Access Mode

LAN Only LAN And WAN

NetBios Name Service

Workgroup Name:

Host Name:

Printer Server

Enable Disable

Note:

1. If character set is set to "English", only English long file name is supported.
2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; : " < > * + = / | ?.

OK

3. Setup a user account for the FTP service by using **USB Application >>USB User Management**. Click **Enable** to enable FTP/SMB User account. Here we add a new account "user1" and assign authorities "Read", "Write" and "List" to it.

USB Application >> USB User Management

Profile Index: 1

FTP/SMB User	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text" value="user1"/>
Password	<input type="password"/> (Maximum 11 Characters)
Confirm Password	<input type="password"/>
Home Folder	<input type="text"/> 
Access Rule	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input checked="" type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () and space.

4. Click **OK** to save the configuration.
5. Make sure the FTP service is running properly. Please open a browser and type *ftp://192.168.1.1*. Use the account "user1" to login.

- When the following screen appears, it means the FTP service is running properly.

- Return to **USB Application >> USB Disk Status**. The information for FTP server will be shown as below.

USB Application >> USB Disk Status

USB Mass Storage Device Status

Connection Status: **Disk Connected** Disconnect USB Disk

Write Protect Status: **No**

Disk Capacity: 2009 MB

USB Disk Users Connected | Refresh |

Index	Service	IP Address(Port)	Username	
1.	FTP	192.168.1.10(1963)	user1	Drop

Now, users in LAN of Vigor2915 can access into the USB storage device by typing ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

This page is left blank.

Part VIII Troubleshooting

Troubleshooting

This part will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration.

VIII-1 Diagnostics

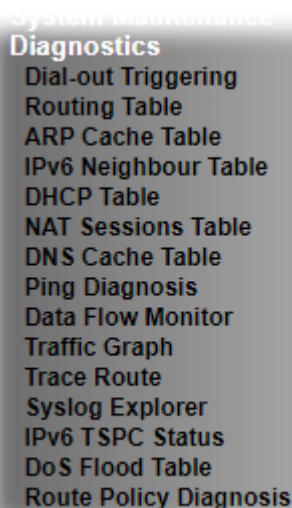

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer or DrayTek technical support for advanced help.

Web User Interface

First, take a look at the menu items under Diagnostics. Diagnostic Tools provide a useful way to view or diagnose the status of your Vigor router.

System Maintenance
Diagnostics
Dial-out Triggering
Routing Table
ARP Cache Table
IPv6 Neighbour Table
DHCP Table
NAT Sessions Table
DNS Cache Table
Ping Diagnosis
Data Flow Monitor

IPv6 DNS Cache Table			Clear Refresh
Domain Name	IP Address	TTL(s)	

Note:

An entry of which TTL shows "Static" is a domain name created in [LAN DNS](#).

When an entry's TTL is larger than s, this entry will be deleted from the table.

OK

Available settings are explained as follows:

Item	Description
Clear	Click this link to remove the result on the window.
Refresh	Click it to reload the page.
When an entry's TTL is larger than....	Check the box the Enter the value of TTL (time to live) for each entry. Click OK to enable such function. It means when the TTL value of each DNS query reaches the threshold of the value specified here, the corresponding record will be deleted from router's Cache automatically.

VIII-1-8 Ping Diagnosis

Click Diagnostics and click Ping Diagnosis to open the web page.

Diagnostics >> Ping Diagnosis

Ping Diagnosis

IPV4 IPV6
 Ping through: Source IP:
 Ping to: IP Address:
 Host / IP
 DNS
 Gateway 1
 Gateway 2

Result | [Clear](#) |

Note:

1. If you want to ping a LAN PC or you don't want to specify which WAN to ping through, please select "Auto" in Ping Through.
2. If you select "Auto" in Source IP, we will fill Source IP according to the interface you ping through.

or

Diagnostics >> Ping Diagnosis

Ping Diagnosis

IPV4 IPV6
 Ping through: Source IP:
 Ping to: IP Address:
 Auto
 WAN1
 WAN2

Result | [Clear](#) |

Note:

1. If you want to ping a LAN PC or you don't want to specify which WAN to ping through, please select "Auto" in Ping Through.
2. If you select "Auto" in Source IP, we will fill Source IP according to the interface you ping through.

Available settings are explained as follows:

Item	Description
IPV4 / IPV6	Choose the interface for such function.
Ping through	Use the drop down list to choose the WAN/LTE interface that you want to ping through or choose Auto to be determined by the router automatically.
Ping to	Use the drop down list to choose the destination that you

	want to ping.
IP Address	Enter the IP address of the Host/IP that you want to ping.
Ping IPv6 Address	Enter the IPv6 address that you want to ping.
Run	Click this button to start the ping work. The result will be displayed on the screen.
Clear	Click this link to remove the result on the window.

VIII-1-9 Data Flow Monitor

This page displays the running procedure for the IP address monitored and refreshes the data in an interval of several seconds. The IP address listed here is configured in Bandwidth Management. You have to enable IP bandwidth limit and IP session limit before invoking Data Flow Monitor. If not, a notification dialog box will appear to remind you enabling it.

[Bandwidth Management >> Sessions Limit](#)

Sessions Limit

Enable Disable

Default Max Sessions:

Limitation List

Index	Start IP	End IP

Click **Diagnostics** and click **Data Flow Monitor** to open the web page. You can click **IP Address**, **TX rate**, **RX rate** or **Session** link for arranging the data display.

Diagnostics >> Data Flow Monitor

Enable Data Flow Monitor

Refresh Seconds: Page:

| [Refresh](#) |

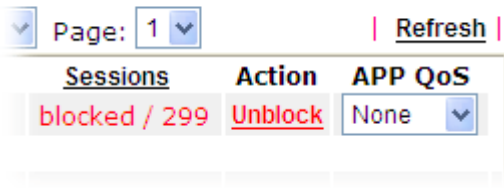

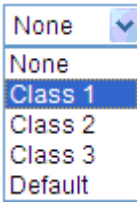

Index	IP Address	TX rate(Kbps)	RX rate(Kbps) ▾	Sessions	Action	APP QoS
		Current / Peak / Speed	Current / Peak / Speed	Current / Peak		
WAN1	---	0 / 0 / Auto	0 / 0 / Auto	0		
WAN2	---	0 / 0 / Auto	0 / 0 / Auto	0		
Total		0 / 0 / Auto	0 / 0 / Auto	0 / 0		

Note:

1. Click "Block" to prevent specified PC from surfing Internet for 5 minutes.
2. The IP blocked by the router will be shown in red, and the session column will display the remaining time that the specified IP will be blocked.
3. When Date Flow Monitor is enabled, Hardware Acceleration will not work.
4. (Kbps): shared bandwidth
 + : residual bandwidth used
 Current/Peak are average.

Available settings are explained as follows:

Item	Description						
Enable Data Flow Monitor	Check this box to enable this function.						
Refresh Seconds	Use the drop down list to choose the time interval of refreshing data flow that will be done by the system automatically.						
Refresh	Click this link to refresh this page manually.						
Index	Display the number of the data flow.						
IP Address	Display the IP address of the monitored device.						
TX rate (kbps)	Display the transmission speed of the monitored device.						
RX rate (kbps)	Display the receiving speed of the monitored device.						
Sessions	Display the session number that you specified in Limit Session web page.						
Action	<p>Block - can prevent specified PC accessing into Internet within 5 minutes.</p> <div style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;"> <p>Page: <input type="text" value="1"/> Refresh </p> <table border="1"> <thead> <tr> <th>Sessions</th> <th>Action</th> <th>APP QoS</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Block</td> <td>None ▾</td> </tr> </tbody> </table> </div> <p>Unblock -The device with the IP address will be blocked for</p>	Sessions	Action	APP QoS	1	Block	None ▾
Sessions	Action	APP QoS					
1	Block	None ▾					

	<p>five minutes. The remaining time will be shown on the session column. Click it to cancel the IP address blocking.</p> 
APP QoS	<p>Use the drop down list to change the priority in data transmission for the specified IP address (host).</p> 
Current /Peak/Speed	<p>Current means current transmission rate and receiving rate for WAN interface.</p> <p>Peak means the highest peak value detected by the router in data transmission.</p> <p>Speed means line speed specified in WAN>>General Setup. If you do not specify any rate at that page, here will display Auto for instead.</p>

VIII-1-10 Traffic Graph

Click **Diagnostics** and click **Traffic Graph** to open the web page. Choose WAN1/WAN2 Bandwidth, Sessions, Ping Detect, daily or weekly for viewing different traffic graph. Click **Reset** to zero the accumulated RX/TX (received and transmitted) data of WAN. Click **Refresh** to renew the graph at any time.

The horizontal axis represents time. Yet the vertical axis has different meanings. For WAN1/WAN2 Bandwidth chart, the numbers displayed on vertical axis represent the numbers of the transmitted and received packets in the past.

For Sessions chart, the numbers displayed on vertical axis represent the numbers of the NAT sessions during the past.

VIII-1-11 Trace Route

Click **Diagnostics** and click **Trace Route** to open the web page. This page allows you to trace the routes from router to the host. Simply Enter the IP address of the host in the box and click **Run**. The result of route trace will be shown on the screen.

Diagnostics >> Trace Route

Trace Route

Trace through:

Protocol:

Host / IP Address:

Result | [Clear](#) |

or

Diagnostics >> Trace Route

Trace Route

IPV4 IPV6

Trace Host / IP Address:

Result | [Clear](#) |

Available settings are explained as follows:

Item	Description
IPv4 / IPv6	Click one of them to display corresponding information for it.
Trace through	Use the drop down list to choose the interface that you want to ping through.
Protocol	Use the drop down list to choose the protocol that you want to ping through.

Host/IP Address	It indicates the IP address of the host.
Trace Host/IP Address	It indicates the IPv6 address of the host.
Run	Click this button to start route tracing work.
Clear	Click this link to remove the result on the window.

VIII-1-12 Syslog Explorer

Such page provides real-time syslog and displays the information on the screen.

For Web Syslog

This page displays the time and message for User/Firewall/call/WAN/VPN settings. You can check **Enable Web Syslog**, specify the type of Syslog and choose the display mode you want. Later, the event of Syslog with specified type will be shown for your reference.

Diagnostics >> Syslog Explorer

2017-09-28 03:35:22	[TELNET] wan		
2017-09-28 03:33:51	[TELNET] wan		

Available settings are explained as follows:

Item	Description
Enable Web Syslog	Check this box to enable the function of Web Syslog.
Syslog Type	Use the drop down list to specify a type of Syslog to be displayed.
Export	Click this link to save the data as a file.
Refresh	Click this link to refresh this page manually.
Clear	Click this link to clear information on this page.
Display Mode	There are two modes for you to choose. Stop record when fulls - when the capacity of syslog is full, the system will stop recording.

	Always record the new event - only the newest events will be recorded by the system.
Time	Display the time of the event occurred.
Message	Display the information for each event.

For USB Syslog

This page displays the syslog recorded on the USB storage disk.

Diagnostics >> Syslog Explorer

Web Syslog	USB Syslog
-------------------	-------------------

Note:
 The syslog will show while the saved syslog file size is over 1MB.
 Folder: n/a File: n/a Page: n/a Log Type: n/a

Time	Log Type	Message
------	----------	---------

Available settings are explained as follows:

Item	Description
Time	Display the time of the event occurred.
Log Type	Display the type of the record.
Message	Display the information for each event.

VIII-1-13 IPv6 TSPC Status

IPv6 TSPC status web page could help you to diagnose the connection status of TSPC.

If TSPC has configured properly, the router will display the following page when the user connects to tunnel broker successfully.

Diagnostics >> IPv6 TSPC Status

WAN1	WAN2	Refresh
TSPC Disabled		

Available settings are explained as follows:

Item	Description
Refresh	Click this link to refresh this page manually.

VIII-1-14 DoS Flood Table

This page can display content of IP connection detected by DoS Flooding Defense mechanism. It is useful and convenient for network engineers (e.g., MIS engineer) to inspect the network environment to find out if there is any abnormal connection.

Information of IP traced and destination port used for SYN Flood, UDP Flood and ICMP Flood attacks will be detected and shown respectively on different pages.

Moreover, IP address detected and suspected to attack the network system can be blocked shortly by clicking the **Block** button shown on pages of SYN Flood, UDP Flood and ICMP Flood.

Diagnostics >> DoS Flood Table

IPv4

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	
.....			

IPv6

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	
.....			

Note:

You need to enable SYN/UDP/ICMP flood defense in **Firewall >> Defense Setup** to make this table effective.

Info

The icon - (⊗) - means there is something wrong (e.g., attacking the system) with that IP address.

VIII-1-15 Route Policy Diagnosis

With the analysis done by such page, possible path (static route, routing table or policy route) of the packets sent out of the router can be traced.

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode Analyze a single packet
 Analyze multiple packets by uploading an input file

Packet Information

Protocol

or

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode Analyze a single packet
 Analyze multiple packets by uploading an input file

Input File

未選擇檔案

([download](#) an example input file)

Analyze

Available settings are explained as follows:

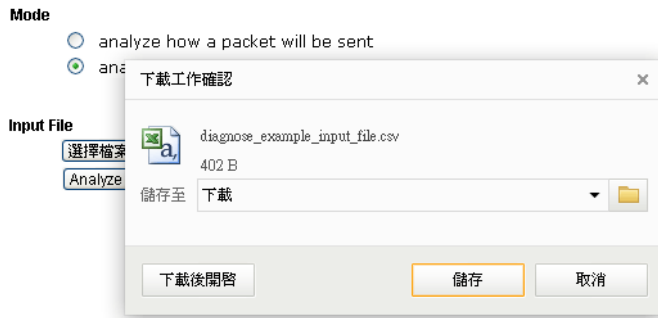

Item	Description
Mode	<p>Analyze a single packet - Choose such mode to make Vigor router analyze how a single packet will be sent by a route policy.</p> <p>Analyze multiple packets... - Choose such mode to make Vigor router analyze how multiple packets in a specified file will be sent by a route policy.</p>
Packet Information	<p>Specify the nature of the packets to be analyzed by Vigor router.</p> <p>ICMP/UDP/TCP/ANY- Specify a protocol for diagnosis.</p> <p>Src IP - Type an IP address as the source IP.</p> <p>Dst IP - Type an IP address as the destination IP.</p> <p>Dst Port - Use the drop down list to specify the destination port.</p>

Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page..

Input File

It is available when Analyze multiple packets.. is selected as Mode.

Select - Click the download link to get a blank example file. Then, click such button to select that blank ".csv" file for saving the result of analysis.

Analyze - Click it to perform the job of analyzing. The analyzed result will be shown on the page. If required, click **export analysis** to export the result as a file.

Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.

VIII-2 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections. Refer to “I-2 Hardware Installation” for details.
2. Turn on the router. Make sure the ACT LED blink once per second and the correspondent LAN LED is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “I-2 Hardware Installation” to execute the hardware installation again. And then, try again.

VIII-3 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

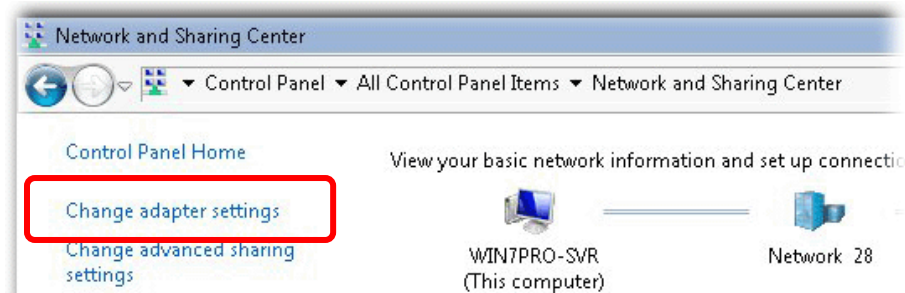

Info

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

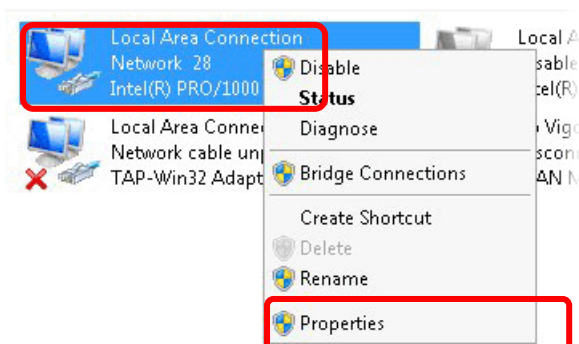

1. Open All Programs>>Getting Started>>Control Panel. Click Network and Sharing Center.

2. In the following window, click Change adapter settings.

3. Icons of network connection will be shown on the window. Right-click on Local Area Connection and click on Properties.

4. Select **Internet Protocol Version 4 (TCP/IP)** and then click **Properties**.

5. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**. Finally, click **OK**.

For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

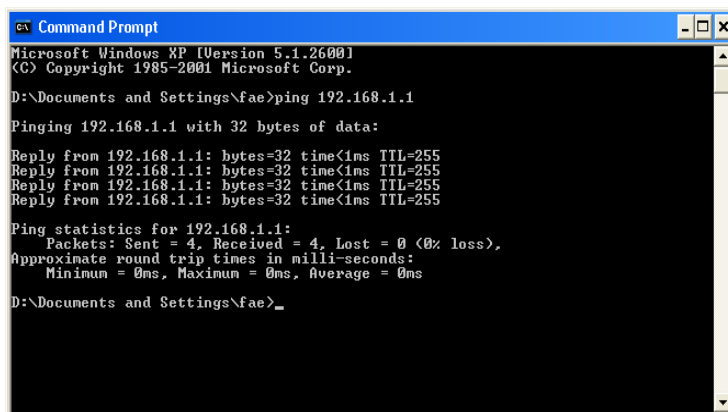

VIII-4 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as get IP automatically. (Please refer to the previous section IX-3) Please follow the steps below to ping the router correctly.

For Windows

1. Open the Command Prompt window (from Start menu> Run).
2. Type command (for Windows 95/98/ME) or cmd (for Windows NT/ 2000/XP/Vista/7). The DOS command dialog will appear.

```
Command Prompt
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

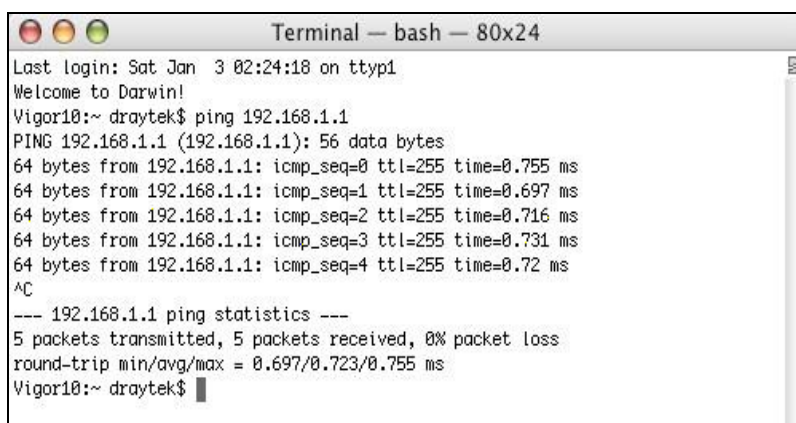

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_
```

3. Type ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “Reply from 192.168.1.1:bytes=32 time<1ms TTL=255” will appear.
4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

1. Double click on the current used MacOs on the desktop.
2. Open the Application folder and get into Utilities.
3. Double click Terminal. The Terminal window will appear.
4. Type ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms” will appear.

```
Terminal — bash — 80x24

round-trip min/avg/max = 0.697/0.723/0.755 ms
Vigor10:~ draytek$
```

VIII-5 Checking If the ISP Settings are OK or Not

If WAN connection cannot be up, check if the LEDs (according to the LED explanations listed on section 1.2) are correct or not. If the LEDs are off, please:

- Change the **Physical Type** from **Auto negotiation** to other values (e.g., 100M full duplex).
- Next, change the physical type of modem (e.g., DSL/FTTX(GPON)/Cable modem) offered by ISP with the same value configured in Vigor router. Check if the LEDs on Vigor router are on or not.
- If not, please install an additional switch for connecting both Vigor router and the modem offered by ISP. Then, check if the LEDs on Vigor router are on or not.
- If the problem of LEDs cannot be solved by the above measures, please contact with the nearest reseller, or send an e-mail to DrayTek FAE for technical support.
- Check if the settings offered by ISP are configured well or not.

When the LEDs are on and correct, yet the WAN connection still cannot be up, please:

- Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1~WAN4 to review the settings that you configured previously.

WAN >> Internet Access

Internet Access			Access Mode	
Index	Display Name	Physical Mode		
WAN1		Fiber	Static or Dynamic IP	Details Page IPv6
WAN2		Ethernet	Static or Dynamic IP	Details Page IPv6

VIII-6 Problems for 3G/4G Network Connection

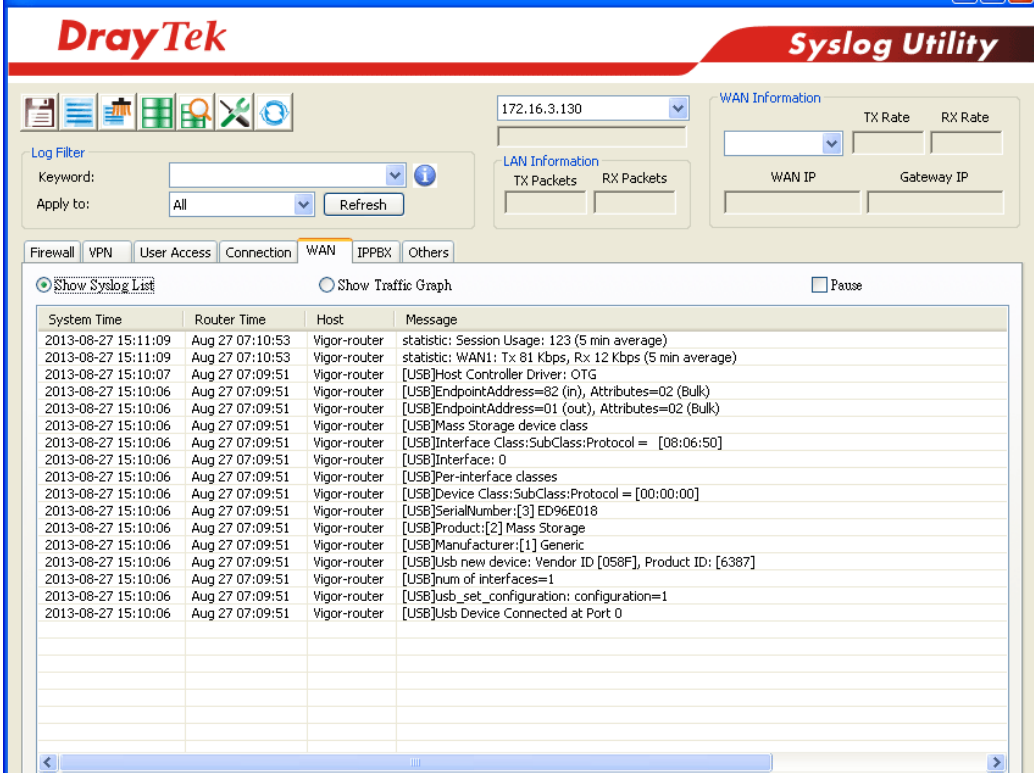

When you have trouble in using 3G/4G network transmission, please check the following:

Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G/4G USB Modem into your Vigor2915. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2915.

USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G/4G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

The screenshot displays the DrayTek Syslog Utility interface. At the top, there is a navigation bar with the DrayTek logo and the title 'Syslog Utility'. Below this, there are several sections: 'Log Filter' with a keyword input field and an 'Apply to' dropdown set to 'All'; 'WAN Information' with a dropdown menu showing '172.16.3.130' and fields for 'TX Rate' and 'RX Rate'; 'LAN Information' with fields for 'TX Packets' and 'RX Packets'; and 'WAN Information' with fields for 'WAN IP' and 'Gateway IP'. A tabbed interface at the bottom shows 'Firewall', 'VPN', 'User Access', 'Connection', 'WAN', 'IPPEX', and 'Others', with 'WAN' selected. Below the tabs, there are radio buttons for 'Show Syslog List' (selected) and 'Show Traffic Graph', along with a 'Pause' checkbox. The main area contains a table with the following data:

System Time	Router Time	Host	Message
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: Session Usage: 123 (5 min average)
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: WAN1: Tx 81 Kbps, Rx 12 Kbps (5 min average)

2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb_set_configuration=1
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb Device Connected at Port 0

Transmission Rate is not fast enough

Please connect your Notebook with 3G/4G USB Modem to test the connection speed to verify if the problem is caused by Vigor2915. In addition, please refer to the manual of 3G/4G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

VIII-7 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

Info

After pressing factory default setting, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

Using current configuration
 Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Schedule Profile : , , ,

Note: Action and Idle Timeout settings will be ignored.

OK Cancel

Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the ACT LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

This page is left blank.

Part IX Telnet Commands

Accessing Telnet of Vigor2915

This chapter also gives you a general description for accessing telnet and describes the firmware versions for the routers explained in this manual.

Info

For Windows 7 user, please make sure the Windows Features of Telnet Client has been turned on under **Control Panel>>Programs**.

Type `cmd` and press Enter. The Telnet terminal will be open later.

In the following window, type `Telnet 192.168.1.1` as below and press Enter. Note that the IP address in the example is the default address of the router. If you have changed the default, enter the current IP address of the router.

Next, type `admin/admin` for Account/Password. Then, type `?`. You will see a list of valid/common commands depending on the router that your use.

```
ca. Telnet 192.168.1.1

```

Telnet Command: csm appe prof

Commands under CSM allow you to set CSM profile to define policy profiles for different policy of IM (Instant Messenger)/P2P (Peer to Peer) application.

“csm appe prof “ is used to configure the APP Enforcement Profile name. Such profile will be applied in Default Rule of Firewall>>General Setup for filtering.

Syntax

```
csm appe prof -i INDEX [-v | -n NAME|setdefault]
```

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 32.
-v	It means to view the configuration of the CSM profile.
-n	It means to set a name for the CSM profile.
<i>NAME</i>	It means to specify a name for the CSM profile, less than 15 characters.
<i>setdefault</i>	Reset to default settings.

Example

```
> csm appe prof -i 1 -n games
The name of APPE Profile 1 was setted.
```

Telnet Command: csm appe set

It is used to configure group settings for IM/P2P/Protocol and Others in APP Enforcement Profile.

```
csm appe set -i INDEX [-v GROUP| -e AP_IDX | -d AP_IDX]
```

Syntax Description

Parameter	Description
<i>INDEX</i>	Specify the index number of CSM profile, from 1 to 32.
-v	View the IM/P2P/Protocol and Others configuration of the CSM profile.
-e	Enable to block specific application.
-d	Disable to block specific application.
<i>GROUP</i>	Specify the category of the application. Available options are: IM, P2P, Protocol and Others.
<i>AP_IDX</i>	Each application has independent index number for identification in CLI command. Specify the index number of the application here. If you have no idea of the index number, do the following (Take IM as an example): Type “csm appe set -i 1 -v IM”, the system will list all of the index numbers of the applications categorized under IM.

Example

```
> Vigor> csm appe set -i 1 -e 1
Profile 1 - : AIM is enabled.
```

Telnet Command: csm appe show

It is used to display group (IM/P2P/Protocol and Others) information APP Enforcement Profile.

csm appe show [-a/-i/-p/-t/-m]

Syntax Description

Parameter	Description
-a	View the configuration status for All groups.
-i	View the configuration status of IM group.
-p	View the configuration status of P2P group.
-t	View the configuration status of protocol group.
-m	View the configuration status of Others group.

Example

```
>csm appe show -t
```

Type	Index	Name	Version	Advance
Advanced Option: (M)essage, (F)ile Transfer, (G)ame, (C)onference, and (O)ther Activities				

PROTOCOL	52	DB2		
PROTOCOL	53	DNS		
PROTOCOL	54	FTP		
PROTOCOL	55	HTTP	1.1	
PROTOCOL	56	IMAP	4.1	
PROTOCOL	57	IMAP STARTTLS	4.1	
PROTOCOL	58	IRC	2.4.0

Telnet Command: csm appe config

It is used to display the configuration status (enabled or disabled) for IM/P2P/Protocol/Other applications.

csm appe config -v INDEX [-i/-p/-t/-m]

Syntax Description

Parameter	Description
INDEX	Specify the index number of CSM profile, from 1 to 32.
-i	View the configuration status of IM group.
-p	View the configuration status of P2P group.
-t	View the configuration status of protocol group.
-m	View the configuration status of Others group.

Example

```
> csm appe config -v 1 -m
```

Group	Type	Index	Name	Enable	A
vance Enable					
Advance abbreviation: Message, File Transfer, Game, Conference, and Other					
Advance abbreviation: : M, F, G, C, and O					

OTHERS	TUNNEL	75	DNSCrypt	Disable	
OTHERS	TUNNEL	76	DynaPass	Disable	
OTHERS	TUNNEL	77	FreeU	Disable	

OTHERS	TUNNEL	78	HTTP Proxy	Disable
OTHERS	TUNNEL	79	HTTP Tunnel	Disable
OTHERS	TUNNEL	80	Hamachi	Disable
OTHERS	TUNNEL	81	Hotspot Shield	Disable
OTHERS	TUNNEL	82	MS Teredo	Disable
OTHERS	TUNNEL	83	PGPNet	Disable
OTHERS	TUNNEL	84	Ping Tunnel	Disable

Telnet Command: csm appe interface

It is used to configure APPE signature download interface.

csm appe interface [*AUTO/WAN#*]

Syntax Description

Parameter	Description
<i>AUTO</i>	Vigor router specifies WAN interface automatically.
<i>WAN</i>	Specify the WAN interface for signature downloading.

Example

```
> csm appe interface wan1
Download interface is set as "WAN1" now.
> csm appe interface auto
Download interface is set as "auto-selected" now.
```

Telnet Command: csm appe email

It is used to set notification e-mail for APPE signature based on the settings configured in System Maintenance>>SysLog/Mail Alert Setup (in which, the box of APPE Signature is checked under Enable E-Mail Alert).

csm appe email [-e/-d/-s]

Syntax Description

Parameter	Description
-e	Enable notification e-mail mechanism.
-d	Disable notification e-mail mechanism.
-s	Send an example e-mail.

Example

```
> csm appe email -e
Enable APPE email.
```

Telnet Command: csm ucf

It is used to configure settings for URL control filter profile.

Syntax

csm ucf show

csm ucf setdefault

csm ucf msg *MSG*

csm ucf obj *INDEX* [-n *PROFILE_NAME* | -I [*P|B|A|N*] | *uac* | *wf*]

csm ucf obj *INDEX* -n *PROFILE_NAME*

csm ucf obj *INDEX* -p *VALUE*

csm ucf obj *INDEX* -I *P|B|A|N*

csm ucf obj *INDEX* *uac*

csm ucf obj *INDEX* *wf*

Syntax Description

Parameter	Description
<i>show</i>	It means to display all of the profiles.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>msg MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>obj</i>	It means to specify the object for the profile.
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
-n	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
-p	Set the priority (defined by the number specified in VALUE) for the profile.

<i>VALUE</i>	Number 0 to 3 represent different conditions. 0: It means Bundle: Pass. 1: It means Bundle: Block. 2: It means Either: URL Access Control First. 3: It means Either: Web Feature First.
<i>-l</i>	It means the log type of the profile. They are: P: Pass, B: Block, A: All, N: None
<i>MSG</i>	It means to specify the Administration Message, less then 255 characters
<i>uac</i>	It means to set URL Access Control part.
<i>wf</i>	It means to set Web Feature part.

Example

```
> csm ucf obj 1 -n game -l B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[ ]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
  No  Grp NO.   Group Name
-----
```

Telnet Command: csm ucf obj INDEX uac

It means to configure the settings regarding to URL Access Control (uac).

Syntax

```
csm ucf obj INDEX uac -v
csm ucf obj INDEX uac -e
csm ucf obj INDEX uac -d
csm ucf obj INDEX uac -a P|B
csm ucf obj INDEX uac -i E|D
csm ucf obj INDEX uac -o KEY_WORD_Object_Index
csm ucf obj INDEX uac -g KEY_WORD_Group_Index
```

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
- v	It means to view the protocol configuration of the CSM profile.

<i>-e</i>	It means to enable the function of URL Access Control.
<i>-d</i>	It means to disable the function of URL Access Control.
<i>-a</i>	Set the action of specific application, P or B. B: Block. The web access meets the URL Access Control will be blocked. P: Pass. The web access meets the URL Access Control will be passed.
<i>-i</i>	Prevent the web access from any IP address. E: Enable the function. The Internet access from any IP address will be blocked. D: Disable the function.
<i>-o</i>	Set the keyword object.
<i>KEY_WORD_Object_Index</i>	Specify the index number of the object profile.
<i>-g</i>	Set the keyword group.
<i>KEY_WORD_Group_Index</i>	Specify the index number of the group profile.

Example

```

> csm ucf obj 1 uac -i E
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[v]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
  No  Grp NO.   Group Name
-----

> csm ucf obj 1 uac -a B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
  No  Grp NO.   Group Name
-----

```

Telnet Command: csm ucf obj INDEX wf

It means to configure the settings regarding to Web Feature (wf).

Syntax

csm ucf obj *INDEX wf -v*

csm ucf obj *INDEX wf -e*

csm ucf obj *INDEX wf -d*

csm ucf obj *INDEX wf -a P/B*

csm ucf obj *INDEX wf -s WEB_FEATURE*

csm ucf obj *INDEX wf -u WEB_FEATURE*

csm ucf obj *INDEX wf -f File_Extension_Object_index*

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
<i>-v</i>	It means to view the protocol configuration of the CSM profile.
<i>-e</i>	It means to enable the restriction of web feature.
<i>-d</i>	It means to disable the restriction of web feature.
<i>-a</i>	Set the action of web feature, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-s</i>	It means to enable the the Web Feature configuration. Features available for configuration are: c: Cookie p: Proxy u: Upload
<i>-u</i>	It means to cancel the web feature configuration.
<i>-f</i>	It means to set the file extension object index number.
<i>File_Extension_Object_index</i>	Enter the index number (1 to 8) for the file extension object.

Example

```
> csm ucf obj 1 wf -s c
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v] Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
 
  No  Grp NO.   Group Name
-----

[ ]Enable Restrict Web Feature
Action:[pass]
```

File Extension Object Index : [0]	Profile Name : []
[V] Cookie [] Proxy [] Upload	

Telnet Command: csm wcf

It means to configure the settings regarding to web control filter (wcf).

Syntax

```

csm wcf show
csm wcf look
csm wcf cache
csm wcf server WCF_SERVER
csm wcf msg MSG
csm wcf setdefault
csm wcf obj INDEX -v
csm wcf obj INDEX -a P/B
csm wcf obj INDEX -n PROFILE_NAME
csm wcf obj INDEX -l N/P/B/A
csm wcf obj INDEX -o KEY_WORD Object Index
csm wcf obj INDEX -g KEY_WORD Group Index
csm wcf obj INDEX -w E/D/P/B
csm wcf obj INDEX -s CATEGORY|WEB_GROUP
csm wcf obj INDEX -u CATEGORY|WEB_GROUP

```

Syntax Description

Parameter	Description
<i>show</i>	It means to display the web content filter profiles.
<i>Look</i>	It means to display the license information of WCF.
<i>Cache</i>	It means to set the cache level for the profile.
<i>Server WCF_SERVER</i>	It means to set web content filter server.
<i>Msg MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>obj</i>	It means to specify the object profile.
<i>INDEX</i>	It means to specify the index number of web content filter profile, from 1 to 8.
<i>- v</i>	It means to view the web content filter profile.
<i>-a</i>	Set the action of web content filter profile, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-n</i>	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
<i>-l</i>	It means the log type of the profile. They are: P: Pass, B: Block,

	A: All, N: None
<i>-o</i>	Set the keyword object.
<i>KEY_WORD_Object_Index</i>	Specify the index number of the object profile.
<i>-g</i>	Set the keyword group.
<i>KEY_WORD_Group_Index</i>	Specify the index number of the group profile.
<i>-w</i>	It means to set the action for the black and white list. E:Enable, D:Disable, P:Pass, B:Block
<i>-s</i>	It means to choose the items under CATEGORY or WEB_GROUP.
<i>-u</i>	It means to discard items under CATEGORY or WEB_GROUP.
WEB_GROUP	Child_Protection, Leisure, Business, Chating, Computer Internet, Other
CATEGORY	Includes: Alcohol & Tobacco, Criminal Activity, Gambling, Hate & Intoleranc, Illegal Drug, Nudity, Pornography/Sexually Explicit, Weapons, Violence, School Cheating,Sex Education, Tasteless, Child Abuse Imges, Entertainment, Games, Sports, Travel, Leisure & Recreation, Fashin & Beauty, Business, Job Search, Web-based Emal, Chat, Instant Messaging, Anonymizers, Forums & Newsgroups, Computers & Technology, Download Sites, Streaming Media & Downloads, Phishing & Fraud, Search Engines & Portals, Social Networking, Spam Sites,Malware, Botnets, Hacking, Illegal Software, Information Security,Peer-to-eer, Advertisements & Pop-Ups, Arts, Transportation, Compromised, Dating & Personals, , Education, Finance, Government,Health & Medcine, News, Non-profits & NGOs, Personal Sites,Politics, Real Estate, Rligion, Restaurants & Dining,Shopping, Translators, General, Cults,Greetig cards, Image Sharing, Network Errors, Parked Domains, Private IP Addresses)

Example

```
> csm wcf obj 1 -n test_wcf
Profile Index: 1
Profile Name:[test_wcf]
[ ]White/Black list
Action:[block]
  No  Obj NO.   Object Name
  ---  ---
  No  Grp NO.   Group Name
  ---  ---
Action:[block]
Log:[block]
-----
child Protection Group:
  [v]Alcohol & Tobacco      [v]Criminal & Activity  [v]Gambling
  [v]Hate & Intolerance     [v]Illegal Drug        [v]Nudity

>
```

Telnet Command: csm dnsf

It means to configure the settings regarding to DNS filter.

```
csm dnsf enable ON/OFF
csm dnsf syslog N/P/B/A
csm dnsf service WCF_PROFILE
csm dnsf service_ucf UCF_PROFILE
csm dnsf time CACHE_TIME
csm dnsf blockpage show/on/off
csm dnsf profile_show
csm dnsf profile_edit INDEX
csm dnsf profile_edit INDEX -n PROFILE_NAME
csm dnsf profile_edit INDEX -I N/P/B/A
csm dnsf profile_edit INDEX -w WCF_PROFILE
csm dnsf profile_edit INDEX -u UCF_PROFILE
csm dnsf profile_edit INDEX -c CACHE_TIME
```

Syntax Description

Parameter	Description
<i>enable</i>	Enable or disable DNS Filter. ON: enable. OFF: disable.
<i>syslog</i>	Determine the content of records transmitting to Syslog. P: Pass. Records for the packets passing through DNS filter will be sent to Syslog. B: Block. Records for the packets blocked by DNS filter will be sent to Syslog. A: All. Records for the packets passing through or blocked by DNS filter will be sent to Syslog. N: None. No record will be sent to Syslog.
<i>service WCF_PROFILE</i>	WCF_PROFILE: Specify a WCF profile as the base of DNS filtering. Type a number to indicate the index number of WCF profile (1 is first profile, 2 is second profile, and so on ...).
<i>time CACHE_TIME</i>	CACHE_TIME: It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.
<i>blockpage</i>	DNS sends block page for redirect port. When a web page is blocked by DNS filter, the router system will send a message page to describe that the page is not allowed to be visited. ON: Enable the function of displaying message page. OFF: Disable the function of displaying message page. SHOW: Display the function of displaying message page is ON or OFF.
<i>profile_show</i>	Display the table of the DNS filter profile.
<i>profile_edit</i>	Modify the content of the DNS filter profile.
<i>-n PROFILE_NAME</i>	PROFILE_NAME: Enter the name of the DNS filter profile that you want to modify.
<i>-I N P B A</i>	Specify the log type of the profile. P: Pass. B: Block. A: All. N: None.
<i>-w WCF_PROFILE</i>	WCF_PROFILE: Enter the index number of the WCF profile.
<i>-u UCF_PROFILE</i>	UCF_PROFILE: Enter the index number of the UCF profile.
<i>-c CACHE_TIME</i>	-c means to set the cache time for DNS filter. CACHE_TIME: It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.

Example

```
> csm dnsf service 2
dns service set up!!!
>csm dnsf service 3
wcf profile 3 is empty.....
>csm dnsf cachetime 1
dns cache time set up!!!
```

Telnet Command: ddns enable

This command allows users to enable or disable the DDNS service.

Syntax

ddns enable *[0/1]*

Syntax Description

Parameter	Description
<i>0/1</i>	0 - Disable the DDNS service. 1 - Enable the DDNS service.

Example

```
> ddns enable 1
  Enable Dynamic DNS Setup
>
```

Telnet Command: ddns set

This command allows users to set Dynamica DNS account.

Syntax

ddns set *[option]*

ddns set *-i [account index] -S [service provider] -T [service type] -D [hostname] -L [username] -P [password]*

Syntax Description

Parameter	Description
<i>-i [value]</i>	It means index number of Dynamic DNS Account. value: 1-6
<i>-E [value]</i>	It means to enable /disable Dynamic DNS Account. value: 0: Disable, 1:Enable
<i>-W [value]</i>	It means to specify WAN Interface. [value]: Must be between 1-8 1: WAN1 First 2: WAN1 Only 3: WAN2 First 4: WAN2 Only example: To set WAN Interface: WAN1 First
<i>-L [value]</i>	It means to type Login Name. [value]: limit up to 64 characters
<i>-P [value]</i>	It means to type Password. [value]: limit up to 24 characters
<i>-C [value]</i>	It means to enable /disable Wildcards. [value]: 0: Disable, 1:Enable
<i>-B [value]</i>	It means to enable / disable Backup MX. [value]: 0: Disable, 1:Enable
<i>-M [value]</i>	It means to type Mail Extender.

	[value]: limit up to 60 characters
<i>-R [value]</i>	It means to type Determine Real WAN IP. [value]: 0: WAN IP, 1: Internet IP
<i>-S [value]</i>	It means to specify Service Provider. If user want to set User-Defined page, value must select 1. [value]: value must be between 1-19. 1 >> User-Defined 2 >> 3322 DDNS (www.3322.org) 3 >> ChangeIP.com (www.changeip.com) 4 >> ddns.com.cn (www.ddns.com.cn) 5 >> DtDNS (www.dtdns.com) 6 >> dyn.com (www.dyn.com) 7 >> DynAccess (www.dynaccess.com) 8 >> dynami.co.za (www.dynami.co.za) 9 >> freedns.afraid.org (freedns.afraid.org) 10 >> NO-IP.COM Free (www.no-ip.com) 11 >>.opendns.com (www.opendns.com) 12 >> OVH (www.ovh.com) 13 >> Strato (www.strato.eu) 14 >> TwoDNS (www.twodns.de) 15 >> TZO (www.tzo.com) 16 >> ubddns.org (ubddns.org) 17 >> Viettel DDNS (vddns.vn) 18 >> vigorddns.com (www.vigorddns.com) 19 >> ZoneEdit DDNS (dynamic.zoneedit.com)
<i>T [value]</i>	It means to type Service Type. [value]: value must be between 1-3. 1: Dynamic 2: Custom 3: Static
<i>-D <Host Name> <sub Domain Name></i>	It means to type Domain Name. i.e: Account index 1 setting Domain Name for Dynamic Service Type >> ddns set -i 1 -T 1 -D "host ddns.com.cn" i.e: Account index 2 setting Domain Name for Custom Service Type >> ddns set -i 2 -T 2 -D "domain name" i.e: Account index 3 setting Domain Name for Static Service Type >> ddns set -i 3 -T 3 -D "domain name"
<i>-H [value]</i>	It means to type User-Defined Provider Host. [value]: limit up to 64 characters
<i>-A [value]</i>	It means to type User-Defined Service API. [value]: limit up to 256 characters
<i>-a [value]</i>	It means to type User-Defined Auth Type. [value]: 0: basic 1: URL
<i>-N [value]</i>	It means to type User-Defined Connection Type. [value]: 0: Http 1: Https
<i>-O [value]</i>	It means to type User-Defined Server Response. [value]: limit up to 32 characters

Example

```
> ddns set -i 1 -S 6 -T 1 -D "hostname dnsalias.net" -L user1 -P pwd1
> Save OK
```

Telnet Command: ddns log

Displays the DDNS log.

Example

```
> ddns log
> ddns log2017-09-04 04:43:46.5 >>>> DDNS is updating. <<<<<2017-09-04
04:43:05.6 >>>> DDNS is updating. <<<<<
```

Telnet Command: ddns time

Sets and displays the DDNS time.

Syntax

`ddns time [update in minutes]`

Syntax Description

Parameter	Description
<i>Update in minutes</i>	Enter the value as DDNS time. The range is from 1 to 14400.

Example

```
> ddns time
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1440
> ddns time 1000
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1000
```

Telnet Command: ddns forceupdate

This command will update DDNS automatically.

Example

```
> ddns forceupdate
Now updating DDNS ...
Please check result by using command "ddns log"
```

Telnet Command: ddns setdefault

This command will return DDS with factory default settings.

Example

```
>ddns setdefault
>Set to Factory Default.
```

Telnet Command: ddns show

This command allows users to check the content of selected DDNS account.

Syntax

ddns show -i [value]

Syntax Description

Parameter	Description
-I [value]	Display the content of selected DDNS account. [value]: value must be between 1-6

Example

```
> ddns show -i 1
-----
Index: 1
[ ] Enable Dynamic DNS Account
WAN Interface: WAN1 First
Service Provider: dyn.com (www.dyn.com)
Service Type: Dynamic
Domain Name: [].[]
Login Name:
[ ] Wildcards
[ ] Backup MX
Mail Extender:
Determine Real WAN IP: WAN IP

DrayTek>
```

Telnet Command: dos

This command allows users to configure the settings for DoS defense system.

Syntax

dos [-V | D | A]

dos [-s ATTACK_F [THRESHOLD][TIMEOUT]]

dos [-a | e [ATTACK_F][ATTACK_0] | d [ATTACK_F][ATTACK_0]]

Syntax Description

Parameter	Description
-V	It means to view the configuration of DoS defense system.
-D	It means to deactivate the DoS defense system.
-A	It means to activate the DoS defense system.
-s	It means to enable the defense function for a specific attack and set its parameter(s).
ATTACK_F	It means to specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan.
THRESHOLD	It means the packet rate (packet/second) that a flooding attack will be detected. Set a value larger than 20.
TIMEOUT	It means the time (seconds) that a flooding attack will be blocked. Set a value larger than 5.
-a	It means to enable the defense function for all attacks listed in ATTACK_0.
-e	It means to enable defense function for a specific attack(s).
ATTACK_0	It means to specify a name of the following attacks: ip_option,

	tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.
-d	It means to disable the defense function for a specific attack(s).

Example

```
>dos -A
The Dos Defense system is Activated
>dos -s synflood 50 10
Synflood is enabled! Threshold=50 <pke/sec> timeout=10 <pke/sec>
```

Telnet Command: exit

Type this command will leave telnet window.

Telnet Command: Internet

This command allows you to configure detailed settings for WAN connection.

Syntax

internet -W n -M n [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
-W n	W means to select WAN interface. n: 1: WAN1 ,2: WAN2, ... x: WANx. Default is WAN1.
-M n	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 - 7, A, B) n=0: Offline n=1: PPPoE n=2: Dynamic IP n=3: Static IP n=4: PPTP with Dynamic IP, n=5: PPTP with Static IP, n=6: L2TP with Dynamic IP n=7: L2TP with Static IP n=A: 3G/4G USB Modem(PPP mode) n=B: 3G/4G USB Modem(DHCP mode)
<command><parameter>/[...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-S <isp name>	It means to set ISP Name (max. 23 characters).
-P <on/off>	It means to enable PPPoE Service.
-u <username>	It means to set username (max. 49 characters) for Internet accessing.
-p <password>	It means to set password (max. 49 characters) for Internet accessing.
-a n	It means to set PPP Authentication Type and n means different types (represented by 0-1). n=0: PAP/CHAP (this is default setting) n=1: PAP Only

-t n	It means to set connection duration and n means different conditions. n=-1: Always-on n=1 ~ 999: Idle time for offline (default 180 seconds)
-i <ip address>	It means that <i>PPPoE server</i> will assign an IP address specified here for CPE (PPPoE client). If you type 0.0.0.0 as the <ip address>, ISP will assign suitable IP address for you. However, if you type an IP address here, the router will use that one as a fixed IP.
-w <ip address>	It means to assign WAN IP address for such connection. Please type an IP address here for WAN port.
-n <netmask>	It means to assign netmask for WAN connection. You have to type 255.255.255.xxx (x is changeable) as the netmask for WAN port.
-g <gateway>	It means to assign gateway IP for such WAN connection.
-s <server ip>	It means to set PPTP/L2TP Server IP. <server ip>= ppp.qqq.rrr.sss: PPTP/L2TP server IP
-A <idx>	Set to Always On mode, and <idx> as backup WAN#.
-B <mode>	Set to Backup mode. <mode> 0: When any WAN disconnect; 1: When all WAN disconnect.
-V	It means to view Internet Access profile.
-C <sim pin code>	Set (PPP mode) SIM PIN code (max. 15 characters) for 3G/4G USB Modem.
-O <init string>	Set (PPP mode) Modem Initial String (max. 47 characters) for 3G/4G USB Modem.
-T <init string2>	Set (PPP mode) Modem Initial String2 (max. 47 characters) for 3G/4G USB Modem.
-D <dial string>	Set (PPP mode) Modem Dial String (max. 31 characters) for 3G/4G USB Modem.
-v <service name>	Set (PPP mode) Service Name (max. 23 characters) for 3G/4G USB Modem.
-m <ppp username>	Set (PPP mode) PPP Username (max. 63 characters) for 3G/4G USB Modem.
-o <ppp password>	Set (PPP mode) PPP Password (max. 62 characters) for 3G/4G USB Modem.
-e n	Set (PPP mode) PPP Authentication Type for 3G/4G USB Modem. n= 0: PAP/CHAP (default), 1: PAP Only
-q n	(PPP mode) Index(1-15) in Schedule Setup-One
-x n	(PPP mode) Index(1-15) in Schedule Setup-Two
-y n	(PPP mode) Index(1-15) in Schedule Setup-Three
-z n	(PPP mode) Index(1-15) in Schedule Setup-Four
-Q <mode>	Set (PPP mode or DHCP mode) WAN Connection Detection Mode. <mode> 0: ARP Detect; 1: Ping Detect
-I <ping ip>	Set (PPP mode or DHCP mode) WAN Connection Detection Ping IP. <ping ip>= ppp.qqq.rrr.sss: WAN Connection Detection Ping IP
-L n	Set (PPP mode) WAN Connection Detection TTL (1-255) value.
-E <sim pin code>	Set (DHCP mode) SIM PIN code (max. 19 characters).

<code>-G <mode></code>	Set (DHCP mode) Network Mode. <mode> 0: 4G/3G/2G; 1: 4G Only; 2: 3G Only; 3: 2G Only
<code>-N <apn name></code>	Set (DHCP mode) APN Name (max. 47 characters)
<code>-U n</code>	(DHCP mode) MTU(1000-1440)

Example

```
>internet -M 1 -S tcom -u username -p password -a 0 -t -1 -i 0.0.0.0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 ISP Name set to tcom
WAN1 Username set to username
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
WAN1 Idle timeout set to always-on
WAN1 Gateway IP set to 0.0.0.0
> internet -V
WAN1 Internet Mode:PPPoE
ISP Name: tcom
Username: username
Authentication: PAP/CHAP
Idle Timeout: -1
WAN IP: Dynamic IP
> internet -M 1 -u link1 -p link1 -a 0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 Username set to link1
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
```

Telnet Command: ip pubsubnet

This command allows users to enable or disable the public subnet for your router.

Syntax

`ip pubsubnet <Enable/Disable>`

Syntax Description

Parameter	Description
<i>Enable</i>	Enable the function.
<i>Disable</i>	Disable the function.

Example

```
> ip pubsubnet enable
public subnet enabled!
```

Telnet Command: ip pubaddr

This command allows to set the IP routed subnet for the router.

Syntax

ip pubaddr ?

ip pubaddr <public subnet IP address>

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet IP address.
<i>public subnet IP address</i>	Specify an IP address. The system will set the one that you specified as the public subnet IP address.

Example

```
> ip pubaddr ?
% ip addr <public subnet IP address>
% Now: 192.168.0.1

> ip pubaddr 192.168.2.5
% Set public subnet IP address done !!!
```

Telnet Command: ip pubmask

This command allows users to set the mask for IP routed subnet of your router.

Syntax

ip pubmask ?

ip pubmask <public subnet mask>

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet mask.
<i>public subnet IP address</i>	Specify a subnet mask. The system will set the one that you specified as the public subnet mask.

Example

```
> ip pubmask ?
% ip pubmask <public subnet mask>
% Now: 255.255.255.0

> ip pubmask 255.255.0.0
% Set public subnet mask done !!!
```

Telnet Command: ip aux

This command is used for configuring WAN IP Alias.

Syntax

ip aux add [IP] [Join to NAT Pool][wanX]

ip aux remove [index]

Syntax Description

Parameter	Description
<i>add</i>	It means to create a new WAN IP address.
<i>remove</i>	It means to delete an existed WAN IP address.
<i>IP</i>	It means the auxiliary WAN IP address.
<i>Join to NAT Pool</i>	0 (disable) or 1 (enable).
<i>wanX</i>	Add or remove an address for WAN interface.
<i>index</i>	Enter the index number of the table displayed on your screen.

Example

```
> ip aux add 192.168.1.65 1
% 192.168.1.65 has added in index 2.

> ip aux ?%% ip aux add [IP] [Join to NAT Pool]
%% ip aux remove [Index]

%%      Where IP = Auxiliary WAN IP Address.
%%      Join to NAT Pool = 0 or 1.
%%      Index = The Index number of table.

Now auxiliary WAN1 IP Address table:
Index no.      Status  IP address      NAT IP pool
-----
  1             Disable 0.0.0.0 Yes
  2             Enable 192.168.1.65   Yes
```

When you type *ip aux?*, the current auxiliary WAN IP Address table will be shown as the following:

Index no.	Status	IP address	IP pool
1	Enable	172.16.3.229	Yes
2	Enable	172.16.3.56	No
3	Enable	172.16.3.113	No

Telnet Command: ip addr

This command allows users to set/add a specified LAN IP your router.

Syntax

```
ip addr [IP address]
```

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.

Example

```
>ip addr 192.168.50.1
% Set IP address OK !!!
```

Info

When the LAN IP address is changed, the start IP address of DHCP server are still the same. To make the IP assignment of the DHCP server being consistent with this new IP address (they should be in the same network segment), the IP address of the PC must be fixed with the same LAN IP address (network segment) set by this command for accessing into the web user interface of the router. Later, modify the start addresses for the DHCP server.

Telnet Command: ip nmask

This command allows users to set/add a specified netmask for your router.

Syntax

`ip nmask [IP netmask]`

Syntax Description

Parameter	Description
<i>IP netmask</i>	It means the netmask of LAN IP.

Example

```
> ip nmask 255.255.0.0
% Set IP netmask OK !!!
```

Telnet Command: ip arp

ARP displays the matching condition for IP and MAC address.

Syntax

`ip arp add [IP address] [MAC address] [LAN or WAN]`

`ip arp del [IP address] [LAN or WAN]`

`ip arp flush`

`ip arp status`

`ip arp accept [0/1/2/3/4/5/status]`

`ip arp setCacheLife [time]`

In which, **arp add** allows users to add a new IP address into the ARP table; **arp del** allows users to remove an IP address; **arp flush** allows users to clear arp cache; **arp status** allows users to review current status for the arp table; **arp accept** allows to accept or reject the source /destination MAC address; **arp setCacheLife** allows users to configure the duration in which ARP caches can be stored on the system. If **ip arp setCacheLife** is set with "60", it means you have an ARP cache at 0 second. Sixty seconds later without any ARP messages received, the system will think such ARP cache is expired. The system will issue a few ARP request to see if this cache is still valid.

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.
<i>MAC address</i>	It means the MAC address of your router.
<i>LAN or WAN</i>	It indicates the direction for the arp function.
<i>0/1/2/3/4/5</i>	0: disable to accept illegal source mac address

	1: enable to accept illegal source mac address 2: disable to accept illegal dest mac address 3: enable to accept illegal dest mac address 4: Decline VRRP mac into arp table 5: Accept VRRP mac into arp table status: display the setting status.
<i>Time</i>	Available settings will be 10, 20, 30,...2550 seconds.

Example

```

> ip arp accept status
Accept illegal source mac arp: disable

Accept illegal dest mac arp: disable

Accept VRRP mac into arp table: disable
> ip arp status
[ARP Table]
  Index IP Address      MAC Address      Netbios Name
  ---  -
  1    192.168.1.113    00-05-5D-E4-D8-EE  A1000351

```

Telnet Command: ip dhcpc

This command is available for WAN DHCP.

Syntax

`ip dhcpc option`

`ip dhcpc option -h/l`

`ip dhcpc option -d [idx]`

`ip dhcpc option -e [1 or 0] -w [wan unumber] -c [option number] -v [option value]`

`ip dhcpc option -e [1 or 0] -w [wan unumber] -c [option number] -x "[option value]"`

`ip dhcpc option -u [idx unumber]`

`ip dhcpc release [wan number]`

`ip dhcpc renew [wan number]`

`ip dhcpc status`

Syntax Description

Parameter	Description
<i>option</i>	It is an optional setting for DHCP server. -h: display usage -l: list all custom set DHCP options -d: delete custom dhcp client option by index number -e: enable/disable option feature, 1:enable, 0:disable -w: set WAN number (e.g., 1=WAN1) -c: set option number: 0-255 -v: set option value by string -x: set option value by raw byte (hex) -u: update by index number
<i>release</i>	It means to release current WAN IP address.

<i>renew</i>	It means to renew the WAN IP address and obtain another new one.
<i>status</i>	It displays current status of DHCP client.

Example

```
>ip dhcp status
I/F#3 DHCP Client Status:

DHCP Server IP      : 172.16.3.7
WAN Ipm             : 172.16.3.40
WAN Netmask         : 255.255.255.0
WAN Gateway         : 172.16.3.1
Primary DNS         : 168.95.192.1
Secondary DNS       : 0.0.0.0
Leased Time         : 259200
Leased Time T1      : 129600
Leased Time T2      : 226800
Leased Elapsed      : 259194
Leased Elapsed T1   : 129594
Leased Elapsed T2   : 226794
```

Telnet Command: ip ping

This command allows users to ping IP address of WAN1/WAN2/PVC3/PVC4/PVC5 for verifying if the WAN connection is OK or not.

Syntax

`ip ping [IP address] [WAN1 /PVC3/PVC4/PVC5]`

Syntax Description

Parameter	Description
<i>IP address</i>	It means the WAN IP address.
<i>WAN1/PVC3/PVC4/PVC5</i>	It means the WAN port /PVC that the above IP address passes through.

Example

```
>ip ping 172.16.3.229 WAN1
Pinging 172.16.3.229 with 64 bytes of Data:
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Packets: Sent = 5, Received = 5, Lost = 0 <0% loss>
```

Telnet Command: ip tracert

This command allows users to trace the routes from the router to the host.

Syntax

`ip tracert [Host/IP address] [WAN1/WAN2] [Udp/Icmp]`

Syntax Description

Parameter	Description
<i>IP address</i>	It means the target IP address.
<i>WAN1/WAN2</i>	It means the WAN port that the above IP address passes through.
<i>Udp/Icmp</i>	It means the UDP or ICMP.

Example

```
>ip tracert 22.128.2.62 WAN1
Traceroute to 22.128.2.62, 30 hops max
 1  172.16.3.7  10ms
 2  172.16.1.2  10ms
 3  Request Time out.
 4  168.95.90.66 50ms
 5  211.22.38.134 50ms
 6  220.128.2.62 50ms
Trace complete
```

Telnet Command: ip telnet

This command allows users to access specified device by telnet.

Syntax

`ip telnet [IP address][Port]`

Syntax Description

Parameter	Description
<i>IP address</i>	Enter the WAN or LAN IP address of the remote device.
<i>Port</i>	Type a port number (e.g., 23). Available settings: 0 ~65535.

Example

```
> ip telnet 172.17.3.252 23
>
```

Telnet Command: ip rip

This command allows users to set the RIP (routing information protocol) of IP.

Syntax

`ip rip [0/1/2]`

Syntax Description

Parameter	Description
0/1/2	0 means disable; 1 means first subnet and 2 means second subnet.

Example

```
> ip rip 1
%% Set RIP 1st subnet.
```

Telnet Command: ip wanrip

This command allows users to set the RIP (routing information protocol) of WAN IP.

Syntax

```
ip wanrip [ifno] -e [0/1]
```

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 1: WAN1,2: WAN2, 3: PVC3,4: PVC4,5: PVC5 Note: PVC3 -PVC5 are virtual WANs.
<i>-e</i>	It means to disable or enable RIP setting for specified WAN interface. 1: Enable the function of setting RIP of WAN IP. 0: Disable the function.

Example

```
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol disable
> ip wanrip 5 -e 1
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol enable
```

Telnet Command: ip route

This command allows users to set static route.

Syntax

```
ip route add [dst] [netmask][gateway][ifno][rtype]
```

```
ip route del [dst] [netmask][rtype]
```

```
ip route status
```

```
ip route cnc
```

```
ip route default [wan1/wan2/off/?]
```

```
ip route clean [1/0]
```

Syntax Description

Parameter	Description
<i>add</i>	It means to add an IP address as static route.
<i>del</i>	It means to delete specified IP address.
<i>status</i>	It means current status of static route.
<i>dst</i>	It means the IP address of the destination.
<i>netmask</i>	It means the netmask of the specified IP address.
<i>gateway</i>	It means the gateway of the connected router.
<i>ifno</i>	It means the connection interface. 3=WAN1 5=WAN3,6=WAN4,7=WAN5 However, WAN3, WAN4, WAN5 are router-borne WANs
<i>rtype</i>	It means the type of the route. default : default route; static: static route.
<i>cnc</i>	It means current IP range for CNC Network.
<i>default</i>	Set WAN1/WAN2/off as current default route.
<i>clean</i>	Clean all of the route settings. 1: Enable the function. 0: Disable the function.

Example

```
> ip route add 172.16.2.0 255.255.255.0 172.16.2.4 3 static
> ip route status

Codes: C - connected, S - static, R - RIP, * - default, ~ - private
C~      192.168.1.0/   255.255.255.0 is directly connected, LAN1
S       172.16.2.0/   255.255.255.0 via 172.16.2.4, WAN1
```

Telnet Command: ip igmp_proxy

This command allows users to enable/disable igmp proxy server.

Syntax

```
ip igmp_proxy set
ip igmp_proxy reset
ip igmp_proxy wan
ip igmp_proxy t_home[on/off/show/help]
ip igmp_proxy query
ip igmp_proxy ppp [0/1]
ip igmp_proxy status
```

Syntax Description

Parameter	Description
<i>set</i>	It means to enable proxy server.
<i>reset</i>	It means to disable proxy server.
<i>wan</i>	It means to specify WAN interface for IGMP service.
<i>t_home</i>	It means to specify t_home proxy server for using.
<i>On/off/show/help</i>	It means to turn on/off/display or get more information of the T_home service.
<i>query</i>	It means to set IGMP general query interval. The default value is 125000 ms.
<i>ppp</i>	0 - No need to set IGMP with PPP header. 1 - Set IGMP with PPP header.
<i>status</i>	It means to display current status for proxy server.

Example

```
> ip igmp t_home on
%T-Home Setting:
%T-Home Service is turned on.
%WAN1 : Enabled, connection type: PPPoE, without tag for ADSL
%WAN5 : Enabled, connection type: DHCP, tag: 8
%: PVC4(WAN5) is bound to PVC0(WAN1), protocol=MPoA 1483 Bridge
%IGMP Proxy Interface: WAN5(PVC)
%WAN5 for Router-borne Application/ IPTV on/off: ON
> ip igmp_proxy query 130000
This command is for setting IGMP General Query Interval
The default value is 125000 ms
Current Setting is:130000 ms
>
```

Telnet Command: ip igmp_snoop

This command allows users to enable or disable IGMP snoop function.

Syntax

```
ip igmp_snoop enable
ip igmp_snoop disable
```

ip igmp_snoop status
 ip igmp_snoop table
 ip igmp_snoop txquery
 ip igmp_snoop mode
 ip igmp_snoop chkleave
 ip igmp_snoop separate
 ip igmp_snoop portchk

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable igmp snoop function
<i>disable</i>	It means to disable igmp snoop function.
<i>status</i>	It means to display current igmp configuration.
<i>table</i>	It means to display current configuration of igmp.
<i>txquery</i>	It means to send out IGMP QUERY to LAN periodically.
<i>mode</i>	It means to set software or hardware mode for snooping working on.
<i>chkleave</i>	It means to check the leave status. On: enable the IGMP snoop leave checking function. Off: it will drop LEAVE if still clients on the same group.
<i>separate</i>	It means to set IGMP packets being separated by NAT/Bridge. On: The packets will be separated. Off: The packets will not be separated by NAT/Bridge.
<i>portchk</i>	It means to perform LAN port checking for IGMP packets. On: Perform the LAN port checking. Off: No perform the LAN port checking.

Example

```

> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_snoop disable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Disabled.
> ip igmp_snoop mode hw
igmp snooping works on SW mode now.
> ip igmp_snoop mode ?
% ip igmp mode [hw/sw]
igmp snooping works on HW mode now.
> ip igmp_snoop separate ?
% ip igmp separate [on/off]
igmp snoop seprate is ON now.
igmp packets will be separated by NAT/Bridge.
  
```

Telnet Command: ip igmp_fl

This command allows users to activate IGMP fast leave and display current status for IGMP fast leave.

Syntax

ip igmp_fl enable

ip igmp_fl disable

ip igmp_fl status

Syntax Description

Parameter	Description
enable / disable	It means to enable / disable the function of IGMP fast leave.
status	It means to show current status of IGMP fast leave.

Example

```
> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_fl enable
%% ip igmp_fl [enable|disable|status], IGMP Fast Leave is Enabled.
> ip igmp_fl status
%% ip igmp_fl [enable|disable|status], IGMP Fast Leave is Disabled.
```

Telnet Command: ip dmz

Specify MAC address of certain device as the DMZ host.

Syntax

ip dmz [mac]

Syntax Description

Parameter	Description
mac	It means the MAC address of the device that you want to specify

Example

```
>ip dmz ?
% ip dmz <mac>, now : 00-00-00-00-00-00
> ip dmz 11-22-33-44-55-66
> ip dmz ?
% ip dmz <mac>, now : 11-22-33-44-55-66
>
```

Telnet Command: ip dmzswitch

This command allows users to set DMZ mode.

ip dmzswitch *off*

ip dmzswitch *private*

ip dmzswitch *trueip*

`ip dmzswitch active_trueip`

Syntax Description

Parameter	Description
<i>off</i>	It means to turn off DMZ function.
<i>private</i>	It means to set DMZ with private IP.
<i>trueip</i>	It means to set DMZ with true IP.
<i>active_trueip</i>	It means to set the DMZ with active true IP.

Example

```
>ip ip dmzswitch off
>
```

Telnet Command: ip session

This command allows users to set maximum session limit number for the specified IP; set message for exceeding session limit and set how many seconds the IP session block works.

Syntax

`ip session on`

`ip session off`

`ip session default [num]`

`ip session defaultp2p [num]`

`ip session status`

`ip session show`

`ip session timer [num]`

`ip session [block/unblock][IP]`

`ip session [add/del][IP1-IP2][num][p2pnum]`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.
<i>off</i>	It means to turn off session limit for each IP.
<i>default [num]</i>	It means to set the default number of session num limit.
<i>Defaultp2p [num]</i>	It means to set the default number of session num limit for p2p.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all session limit settings in the IP range.
<i>timer [num]</i>	It means to set when the IP session block works. The unit is second.
<i>[block/unblock][IP]</i>	It means to block/unblock the specified IP address. Block: The IP cannot access Internet through the router. Unblock: The specified IP can access Internet through the router.
<i>add</i>	It means to add the session limits in an IP range.
<i>del</i>	It means to delete the session limits in an IP range.
<i>IP1-IP2</i>	It means the range of IP address specified for this command.

<i>num</i>	It means the number of the session limits, e.g., 100.
<i>p2pnum</i>	It means the number of the session limits, e.g., 50 for P2P.

Example

```
>ip session default 100
> ip session add 192.168.1.5-192.168.1.100 100 50
> ip session on
> ip session status

IP range:
  192.168.1.5 - 192.168.1.100 : 100

Current ip session limit is turn on

Current default session number is 100
```

Telnet Command: ip bandwidth

This command allows users to set maximum bandwidth limit number for the specified IP.

Syntax

`ip bandwidth on`

`ip bandwidth off`

`ip bandwidth default [tx_rate][rx_rate]`

`ip bandwidth status`

`ip bandwidth show`

`ip bandwidth [add/del] [IP1-IP2][tx][rx][shared]`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the IP bandwidth limit.
<i>off</i>	It means to turn off the IP bandwidth limit.
<i>default [tx_rate][rx_rate]</i>	It means to set default tx and rx rate of bandwidth limit. The range is from 0 - 65535 Kpbs.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all the bandwidth limits settings within the IP range.
<i>add</i>	It means to add the bandwidth within the IP range.
<i>del</i>	It means to delete the bandwidth within the IP range.
<i>IP1-IP2</i>	It means the range of IP address specified for this command.
<i>tx</i>	It means to set transmission rate for bandwidth limit.
<i>rx</i>	It means to set receiving rate for bandwidth limit.
<i>shared</i>	It means that the bandwidth will be shared for the IP range.

Example

```
> ip bandwidth default 200 800
```

```

> ip bandwidth add 192.168.1.50-192.168.1.100 10 60
> ip bandwidth status

IP range:
  192.168.1.50 - 192.168.1.100 : Tx:10K Rx:60K

Current ip Bandwidth limit is turn off

Auto adjustment is off

```

Telnet Command: ip bindmac

This command allows users to set IP-MAC binding for LAN host.

Syntax

`ip bindmac on`

`ip bindmac off`

`ip bindmac strict_on`

`ip bindmac show`

`ip bindmac add [IP][MAC][Comment]`

`ip bindmac del [IP]/all`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on IP bindmac policy. Even the IP is not in the policy table, it can still access into network.
<i>off</i>	It means to turn off all the bindmac policy.
<i>strict_on</i>	It means that only those IP address in IP bindmac policy table can access into network.
<i>show</i>	It means to display the IP address and MAC address of the pair of binded one.
<i>add</i>	It means to add one ip bindmac.
<i>del</i>	It means to delete one ip bindmac.
<i>IP</i>	It means to Enter the IP address for binding with specified MAC address.
<i>MAC</i>	It means to Enter the MAC address for binding with the IP address specified.
<i>Comment</i>	It means to type words as a brief description.
<i>All</i>	It means to delete all the IP bindmac settings.

Example

```

> ip bindmac add 192.168.1.46 00:50:7f:22:33:55 just for test
> ip bindmac show
ip bind mac function is turned ON
IP : 192.168.1.46 bind MAC : 00-50-7f-22-33-55 Comment : just

```

Telnet Command: ip bgp

This command allows users to configure settings for BGP.

Syntax

```
ip bgp mode [0/1]
ip bgp as [value]
ip bgp hold [value]
ip bgp retry [value]
ip bgp id [value]
ip bgp show
ip bgp neighbor [idx] mode [0/1]
ip bgp neighbor [idx] name [max len: 20]
ip bgp neighbor [idx] ip [x.x.x.x]
ip bgp neighbor [idx] as [1-4294967295]
ip bgp neighbor [idx] show
ip bgp neighbor show all
ip bgp static [sidx][ip][<netmask>]
ip bgp static [sidx] delete
ip bgp static show
```

Syntax Description

Parameter	Description
<i>mode</i> <0/1>	It means to enable / disable BGP mode. 0: disable 1: enable
<i>as</i> <value>	It means to set the AS number for local router. <value>: Available number is between 0 and 4294967295.
<i>hold</i> <value>	It means to set the time interval to determine the peer is dead when the router is unable to receive any keepalive message from the peer within the time. <value>: Available number is between 10 and 65535 (unit: second). The default is 180 (seconds).
<i>retry</i> <value>	It means to set a period of time to reconnect if the router fails to connect to the neighboring router. <value>: Available number is between 3 and 255 (unit: second). The default is 120 (seconds).
<i>id</i> <value>	It means to specify the LAN subnet <1~16> as router ID. <value>: Available number is between 1 and 16.
<i>show</i>	It means to display information related to BGP settings.
<i>neighbor</i> <idx> mode <0/1>	It means to enable / disable the basic BGP function for neighboring router. <idx>: Available profile number is between 1 and 8. <0/1>: 0- disable; 1- enable
<i>neighbor</i> <idx> name <max len: 20>	It means to define a profile name for neighboring router. <idx>: Available profile number is between 1 and 8. <max len>: The maximum name length shall not be over 20 characters.
<i>neighbor</i> <idx> ip <x.x.x.x>	It means to set the IP address specified for the neighboring router. <idx>: Available profile number is between 1 and 8.

	<x.x.x.x>: Enter the IP address, e.g., 100.100.100.100.
<i>neighbor <idx> as <1-4294967295></i>	It means to set the AS number for the neighboring router. <idx>: Available profile number is between 1 and 8. <value>: Available number is between 1 and 4294967295.
<i>neighbor <idx> show</i>	It means to display information for the specified profile. <idx>: Available profile number is between 1 and 8.
<i>neighbor show all</i>	It means to display information for all neighboring routers.
<i>static <sid> <ip> <netmask></i>	It means to configure the neighboring router(s) for exchanging the routing information with the local router. <sid>: Available profile number is between 1 and 6. <ip>: Enter the IP address, e.g., 100.100.100.200. <netmask>: Enter the subnet mask for the neighboring router, e.g., 255.255.255.0.
<i>static <sid> delete</i>	It means to delete static network settings for neighboring router. <sid>: Available profile number is between 1 and 6.
<i>static show</i>	It means to display setting information for exchanging the routing information with the local router.

Example

```

> ip bgp static 1 192.168.2.56 255.255.255.0
Set static network index: 1
IP addr: 192.168.2.56
Net mask: 255.255.255.0
> ip bgp static show
BGP static networks:
Index: 1, IP addr: 192.168.2.56, mask: 255.255.255.0

```

Telnet Command: ip maxnatuser

This command is used to set the maximum number of NAT users.

Syntax

ip maxnatuser *user no*

Syntax Description

Parameter	Description
<i>User no</i>	A number specified here means the total NAT users that Vigor router supports. 0 - It means no limitation.

Example

```
> ip maxnatuser 100
% Max NAT user = 100
```

Telnet Command: ip policy_rt

This command is used to set the IP policy route profile.

Syntax

ip policy_rt [*-<command>* *<parameter>* | ...]

Syntax Description

Parameter	Description
<i><command><parameter>[...]</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
General Setup for Policy Route	
<i>-i [value]</i>	Specify an index number for setting policy route profile. Value: 1 to 60. "-1" means to get a free policy index automatically.
<i>-e [0/1]</i>	0: Disable the selected policy route profile. 1: Enable the selected policy route profile.
<i>-o [value]</i>	Determine the operation of the policy route. Value: add - Create a new policy route profile. del - Remove an existed policy route profile. edit - Modify an existed policy route profile. flush - Reset policy route to default setting.
<i>-1 [any/range]</i>	Specify the source IP mode. Range: Indicate a range of IP addresses. Any: It means any IP address will be treated as source IP address.
<i>-2 [any/ip_range/ip_subnet/do main]</i>	Specify the destination IP mode. Any: No need to specify an IP address for any IP address will be treated as destination IP address. ip_range: Indicates a range of IP addresses. ip_subnet: Indicates the IP subnet. domain: Indicates the domain name.
<i>-3 [any/range]</i>	Specify the destination port mode. Range: Indicate a range of port number.

	Any: It means any port number can be used as destination port.
<i>-G [default/specific]</i>	Specify the gateway mode.
<i>-L [default/specific]</i>	Specify the failover gateway mode.
<i>-s [value]</i>	Indicate the source IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.0)
<i>-S [value]</i>	Indicate the source IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.100)
<i>-d [value]</i>	Indicate the destination IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.0)
<i>-D [value]</i>	Indicate the destination IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.100)
<i>-p [value]</i>	Indicate the destination port start. Value: Type a number (1 ~ 65535) as the port start (e.g., 1000).
<i>-P [value]</i>	Indicate the destination port end. Value: Type a number (1 ~ 65535) as the port end (e.g., 2000).
<i>-y [value]</i>	Indicate the priority of the policy route profile. Value: Type a number (0 ~ 250). The default value is "150".
<i>-I [value]</i>	Indicate the interface specified for the policy route profile. Value: Available interfaces include, LAN1 ~ LAN8, IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN5, VPN_PROFILE_1 ~ VPN_PROFILE_100, WAN_1_IP_ALIAS_1 ~ WAN_4_IP_ALIAS_8
<i>-g [value]</i>	Indicate the gateway IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.3.1)
<i>-l [value]</i>	Indicate the failover IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.4.1)
<i>-t [value]</i>	It means "protocol". Value: Available settings include "TCP", "UDP", "TCP/UDP", "ICMP" and "Any".
<i>-n [0/1]</i>	Indicates the function of "Force NAT". 0: Disable the function. 1: Enable the function.
<i>-a [0/1]</i>	Indicates to enable the function of failover. 0: Disable the function. 1: Enable the function.
<i>-f [value]</i>	It means to specify the interface for failover. Value: Available interfaces include, NO_FAILOVER, Default_WAN, Policy1 ~ Policy60 LAN1 ~ LAN8 IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN5, VPN_PROFILE_1 ~ VPN_PROFILE_100, WAN_1_IP_ALIAS_1 ~ WAN_4_IP_ALIAS_8
<i>-b [value]</i>	It means "failback". Value: Available settings include, 0: Disable the function of "failback".

	1: Enable the function of "failback". -v: View current failback setting.
Diagnose for Policy Route	
-s [value]	It means "source IP". Value: Available settings include: Any: It indicates any IP address can be used as source IP address. "xxx.xxx.xxx.xxx": The type format (e.g, 192.168.1.0).
-d [value]	It means "destination IP". Value : Available settings include: Any: It indicates any IP address can be used as destination IP address. "xxx.xxx.xxx.xxx": Specify an IP address.
-p [value]	It means "destination port". Value: Specify a number or type Any (indicating any number).
-t [value]	It means "protocol". Value: Available settings include "ICMP", "TCP", "UDP" and "Any".

Example

```
> ip policy_rt diagnose -s 192.168.1.100 -d any -p any -t ICMP
-----
      Matched Route (Priority)
-----
* No_Match
-----
      Matched Policy (Priority)
-----
* Policy_1 (200)
-----
* Conclusion:The packet was dropped because the send-to interface of the
mat
ched policy "policy 1" was inactive and there was no failover setting
> ip policy_rt -i -1 -o add -1 range -s 192.168.1.10 -S 192.168.1.20 -2
ip_range -d 202.211.100.10 -D 202.211.100.20 -g 202.211.100.1 -I WAN2
```

Telnet Command: ip lanDNSRes

This command is used to set LAN DNS profiles. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

Syntax

ip lanDNSRes [-<command> <parameter> | ...]

Parameter	Description
-a <IP Address>	It is used to configure IP address mapping (IPv4/IPv6 Address or multiple subnet addresses). <i>IP Address</i> : Enter the IP address (e.g., 192.168.1.56).
-d <address mapping index number>	It means to delete index number with address mapping configured. <i>address mapping index number</i> : Enter the index number which represents the address mapping profile.
-e <0/1>	It means to enable or disable the function of LAN DNS or DNS Forwarding Profile. 0: disable 1: enable

<i>-i</i> <profile setting index number>	It means to create LAN DNS profile with specified domain name. <i>profile setting index number</i> : Enter the index number which represents the profile with domain name configured.
<i>-l</i>	It means to list detailed information of profile configuration. > ip lanDNSRes -l % % Idx: 7 % State: Enable % Profile: DrayTekFTP % Domain Name: ftp.draytek.com % ----- Address Mapping Table ----- % Idx ReplyOnlySameSubnet IP Address % 1 Yes 172.16.2.10 % 2 Yes 172.16.3.10 % 3 Yes 172.16.4.10
<i>-n</i> <domain name>	It means to specify a domain name to be accessed.
<i>-p</i> <profile name>	It means to set name of the LAN DNS profile.
<i>-r</i>	It means to clear specified domain name profile and the address mapping setting.
<i>-s</i> <0/1>	It means to determine all subnet packets or only the packets with the same subnet will be replied for address mapping profile. 0: reply all subnet packets. 1: reply only same subnet packet.
<i>-z</i>	It means to update LAN DNS configuration to DNS cache.

Example

```

> ip lanDNSRes -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip lanDNSRes -i 1 -n ftp.drayTek.com
> ip lanDNSRes -i 1 -a 172.16.2.10 -s 1
> ip lanDNSRes -i 1 -a 172.16.3.10 -s 1
> ip lanDNSRes -i 1 -a 172.16.4.10 -s 1
> ip lanDNSRes -l
%
% Idx: 7
% State: Enable
% Profile: DrayTekFTP
% Domain Name: ftp.draytek.com
% ----- Address Mapping Table -----
% Idx ReplyOnlySameSubnet IP Address
% 1 Yes 172.16.2.10
% 2 Yes 172.16.3.10
% 3 Yes 172.16.4.10

```

Telnet Command: ip dnsforward

This command is used to set LAN DNS profile for conditional DNS forwarding.

ip dnsforward [*-<command>* <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-a</i> <IP Address>	Set forwarded DNS server IP Address.

<i>-d <DNS server mapping index number></i>	Delete the selected LAN DNS profile.
<i>-e <0/1></i>	0: disable such function. 1: enable such function.
<i>-i <profile setting index number></i>	Enter the index number of the profile.
<i>-l</i>	List the content of LAN DNS profile (including domain name, IP address and message).
<i>-n <domain name></i>	Set domain name.
<i>-p <profile name></i>	Set profile name for LAN DNS.
<i>-r</i>	Reset the settings for selected profile.

Example

```

> ip dnsforward -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip dnsforward -i 1 -a 172.16.1.1
% Configure Set1's IP:172.16.1.1
> ip dnsforward -i 1 -l
% Idx: 1
% State: Disable
% Profile: test
% Domain Name: ftp.drayTek.com
% DNS Server IP: 172.16.1.1
>

```

Telnet Command: ip6 addr

This command allows users to set the IPv6 address for your router.

Syntax

`ip6 addr -s [prefix] [prefix-length] [LAN|WAN1|WAN2|iface#]`

`ip6 addr -d [prefix] [prefix-length] [LAN|WAN1|WAN2|iface#]`

`ip6 addr -a [LAN|WAN1|WAN2|iface#]`

Syntax Description

Parameter	Description
<i>-s</i>	It means to add a static ipv6 address.
<i>-d</i>	It means to delete an ipv6 address.
<i>-a</i>	It means to show current address(es) status.
<i>-u</i>	It means to show only unicast addresses.
<i>prefix</i>	It means to Enter the prefix number of IPv6 address.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>LAN WAN1 WAN2 iface#</i>	It means to specify LAN or WAN interface for such address.

Example

```

> ip6 addr -a
LAN

```

```

Unicast Address:
  FE80::250:7FFF:FE00:0/64 (Link)
Multicast Address:
  FF02::2
  FF02::1:FF00:0
  FF02::1

```

Telnet Command: ip6 dhcp req_opt

This command is used to configure option-request settings for DHCPv6 client.

Syntax

```
ip6 dhcp req_opt [LAN/WAN1/WAN2/iface#] [-<command> <parameter>| ... ]
```

Syntax Description

Parameter	Description
<i>req_opt</i>	It means option-request.
<i>LAN/WAN1/WAN2/iface#</i>	It means to specify LAN or WAN interface for such address.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-s</i>	It means to ask the SIP.
<i>-S</i>	It means to ask the SIP name.
<i>-d</i>	It means to ask the DNS setting.
<i>-D</i>	It means to ask the DNS name.
<i>-n</i>	It means to ask NTP.
<i>-i</i>	It means to ask NIS.
<i>-I</i>	It means to ask NIS name.
<i>-p</i>	It means to ask NISP.
<i>-P</i>	It means to ask NISP name.
<i>-b</i>	It means to ask BCMCS.
<i>-B</i>	It means to ask BCMCS name.
<i>-r</i>	It means to ask refresh time.
<i>Parameter</i>	1: the parameter related to the request will be displayed. 0: the parameter related to the request will not be displayed.

Example

```

> ip6 dhcp req_opt WAN2 -S 1
> ip6 dhcp req_opt WAN2 -r 1
> ip6 dhcp req_opt WAN2 -a
% Interface WAN2 is set to request following DHCPv6 options:
%   sip name
>

```

Telnet Command: ip6 dhcp client

This command allows you to use DHCPv6 protocol to obtain IPv6 address from server.

Syntax

`ip6 dhcp client [WAN1|WAN2|iface#] [-<command> <parameter>| ...]`

Syntax Description

Parameter	Description
<i>client</i>	It means the dhcp client settings.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-p [IAID]</i>	It means to request identity association ID for Prefix Delegation.
<i>-n [IAID]</i>	It means to request identity association ID for Non-temporary Address.
<i>-c [parameter]</i>	It means to send rapid commit to server.
<i>-i [parameter]</i>	It means to send information request to server.
<i>-e[parameter]</i>	It means to enable or disable the DHCPv6 client. 1: Enable 0: Disable

Example

```
> ip6 dhcp client WAN2 -p 2008::1
> ip6 dhcp client WAN2 -a
Interface WAN2 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_PD whose IAID equals to 2008
> ip6 dhcp client WAN2 -n 1023456
> ip6 dhcp client WAN2 -a
Interface WAN2 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_NA whose IAID equals to 2008
> system reboot
```

Telnet Command: ip6 dhcp server

This command allows you to configure DHCPv6 server.

Syntax

`ip6 dhcp server [-<command> <parameter>| ...]`

Syntax Description

Parameter	Description
<i>server</i>	It means the dhcp server settings.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-i<pool_min_addr></i>	It means to set the start IPv6 address of the address pool.
<i>-x<pool_max_addr></i>	It means to set the end IPv6 address of the address pool.
<i>-d<addr></i>	It means to set the first DNS IPv6 address.
<i>-D<addr></i>	It means to set the second DNS IPv6 address.

<i>-c<parameter></i>	It means to send rapid commit to server. 1: Enable 0: Disable
<i>-e<parameter></i>	It means to enable or disable the DHCPv6 server. 1: Enable 0: Disable

Example

```
> ip6 dhcp server -d FF02::1
> ip6 dhcp server -i ff02::1
> ip6 dhcp server -x ff02::3
> ip6 dhcp server -a
% Interface LAN has following DHCPv6 server settings:
%   DHCPv6 server disabled
%   maximum address of the pool: FF02::3
%   minimum address of the pool: FF02::1
%   1st DNS IPv6 Addr: FF02::1
```

Telnet Command: ip6 internet

This command allows you to configure settings for accessing Internet.

Syntax

`ip6 internet -W n -M n [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>-W n</i>	W means to set WAN interface and n means different selections. Default is WAN1. n=1: WAN1 n=2: WAN2 n=3: WAN3 . . n=X: WANx
<i>-M n</i>	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 - 5) n= 0: Offline, n=1: PPP, n=2: TSPC, n=3: AICCU, n=4: DHCPv6, n=5: Static n=6:6in4-Static n=7:6rd
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-m n</i>	It means to set IPv6 MTU. N = any value (0 means "unspecified").
<i>-u <username></i>	It means to set Username.

	<username>= type a name as the username (maximum 63 characters).
-p <password>	It means to set Password. <password> = type a password (maximum 63 characters).
-s <server>	It means to set Tunnel Server IP. <server>= IPv4 address or URL (maximum 63 characters).
-d <server>	It means to set the primary DNS Server IP. <server>= type an IPv6 address for first DNS server.
-D <server>	It means to set the secondary DNS Server IP. <server>= type an IPv6 address for second DNS server.
-t <dhcp/ra/none>	It means to set IPv6 PPP WAN test mode for DHCP or RADVD. <dhcp/ra/none>= type IPv6 address.
-V	It means to view IPv6 Internet Access Profile.
-o	It means to set AICCU always on. 1=On, 0=Off

Example

```
> ip6 internet -W 2 -M 2 -u 88886666 -p draytek123456 -s amsterdam.freenet6.net
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> system reboot
```

Telnet Command: ip6 neigh

This command allows you to display IPv6 neighbour table.

Syntax

```
ip6 neigh -s [inet6_addr] [eth_addr] [LAN/WAN1/WAN2]
```

```
ip6 neigh -d [inet6_addr] [LAN/WAN1/WAN2]
```

```
ip6 neigh -a [inet6_addr] [-N LAN/WAN1/WAN2]
```

Syntax Description

Parameter	Description
-s	It means to add a neighbour.
-d	It means to delete a neighbour.
-a	It means to show neighbour status.
inet6_addr	Type an IPv6 address
eth_addr	Type submask address.
LAN/WAN1/WAN2	Specify an interface for the neighbor.

Example

```
> ip6 neigh -s 2001:2222:3333::1111 00:50:7F:11:ac:22:WAN2
      Neighbour 2001:2222:3333::1111 successfully added!
> ip6 neigh -a
```

I/F	ADDR	MAC	STATE
LAN	FF02::1	33-33-00-00-00-01	CONNECTED
WAN2	2001:5C0:1400:B::10B8	00-00-00-00-00-00	CONNECTED
WAN2	2001:2222:3333::1111	00-00-00-00-00-00	CONNECTED
WAN2	2001:2222:6666::1111	00-00-00-00-00-00	CONNECTED
WAN2	::	00-00-00-00-00-00	CONNECTED
LAN	::		NONE

```
>
```

Telnet Command: ip6 neigh

This command allows you to add a proxy neighbour.

Syntax

```
ip6 neigh -s inet6_addr [LAN/WAN1/WAN2]
```

```
ip6 neigh -d inet6_addr [LAN/WAN1/WAN2]
```

```
ip6 neigh -a [inet6_addr] [-N LAN/WAN1/WAN2]
```

Syntax Description

Parameter	Description
-s	It means to add a proxy neighbour.
-d	It means to delete a proxy neighbour.
-a	It means to show proxy neighbour status.
inet6_addr	Type an IPv6 address
LAN/WAN1/WAN2	Specify an interface for the proxy neighbor.

Example

```
> ip6 neigh -s FE80::250:7FFF:FE12:300 LAN
%      Neighbour FE80::250:7FFF:FE12:300 successfully added!
```

Telnet Command: ip6 route

This command allows you to

Syntax

```
ip6 route -s [prefix] [prefix-length] [gateway] [LAN/WAN1/WAN2/iface#] [-D]
```

```
ip6 route -d [prefix] [prefix-length]
```

```
ip6 route -a [LAN/WAN1/WAN2/iface#]
```

Syntax Description

Parameter	Description
-s	It means to add a route.
-d	It means to delete a route.
-a	It means to show the route status.
-D	It means that such route will be treated as the default route.
prefix	It means to Enter the prefix number of IPv6 address.
prefix-length	It means to type a fixed value as the length of the prefix.
gateway	It means the gateway of the router.
LAN/WAN1/WAN2/iface#	It means to specify LAN or WAN interface for such address.

Example

```
> ip6 route -s FE80::250:7FFF:FE12:500 16 FE80::250:7FFF:FE12:100 LAN
%      Route FE80::250:7FFF:FE12:500/16 successfully added!
> ip6 route -a LAN
```

```
PREFIX/PREFIX-LEN  _EXPIRES_  _NEXT-HOP_  I/F  METRIC  STATE  FLAGS
```

```

-----

```

Telnet Command: ip6 ping

This command allows you to ping an IPv6 address or a host.

Syntax

`ip6 ping [IPv6 address/Host] [LAN/WAN1/WAN2]`

Syntax Description

Parameter	Description
<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i>LAN/WAN1/WAN2</i>	It means to specify LAN or WAN interface for such address.

Example

```

> ip6 ping 2001:4860:4860::8888 WAN2

Pinging 2001:4860:4860::8888 with 64 bytes of Data:

Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms

Packets: Sent = 5, Received = 5, Lost = 0 <% loss>
>

```

Telnet Command: ip6 tracert

This command allows you to trace the routes from the router to the host.

Syntax

`ip6 tracert [IPv6 address/Host]`

Syntax Description

Parameter	Description
<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.

Example

```
> ip6 tracert 2001:4860:4860::8888
traceroute to 2001:4860:4860::8888, 30 hops max through protocol ICMP
 1 2001:5C0:1400:B::10B8      340 ms
 2 2001:4DE0:1000:A22::1     330 ms
 3 2001:4DE0:A::1           330 ms
 4 2001:4DE0:1000:34::1     340 ms
 5 2001:7F8:1: :A501:5169:1 330 ms
 6 2001:4860::1:0:4B3       350 ms
 7 2001:4860::8:0:2DAF      330 ms
 8 2001:4860::2:0:66E      340 ms
 9 Request timed out.      *
10 2001:4860:4860::8888    350 ms
Trace complete.
>
```

Telnet Command: ip6 tpsc

This command allows you to display TSPC status.

Syntax

`ip6 tpsc [ifno]`

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. Ifno=1 (means WAN1) Info=2 (means WAN2)

Example

```
> ip6 tpsc 2
Local Endpoint v4 Address : 111.243.177.223
Local Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b9
Router DNS name : 8886666.broker.freenet6.net
Remote Endpoint v4 Address : 81.171.72.11
Remote Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b8
Tspc Prefixlen : 56
Tunnel Broker: Amsterdam.freenet.net

Status: Connected
```

```
>
```

Telnet Command: ip6 radvd

This command allows you to enable or disable RADVD server.

Syntax

```
ip6 radvd -s [1/0] [lifetime]
```

```
ip6 radvd -V
```

Syntax Description

Parameter	Description
-s	It means to enable or disable the default lifetime of the RADVD server. 1: Enable the RADVD server. 0: Disable the RADVD server.
<i>Lifetime</i>	It means to set the lifetime. The lifetime associated with the default router in units of seconds. It's used to control the lifetime of the prefix. The maximum value corresponds to 18.2 hours. A lifetime of 0 indicates that the router is not a default router and should not appear on the default router list. Enter the number (unit: second) you want.
-V	It means to show the RADVD configuration.
-r	It means RA default test.
-r [num]	It means RA test for item [num].

Example

```
> ip6 radvd -s 1 1800
> ip6 radvd -V
% IPv6 Radvd Config:
Radvd : Enable, Default Lifetime : 1800 seconds
```

Telnet Command: ip6 mngt

This command allows you to manage the settings for access list.

Syntax

```
ip6 mngt list
```

```
ip6 mngt list [add<index> <prefix> <prefix-length>|remove <index>|flush]
```

```
ip6 mngt status
```

```
ip6 mngt [http/telnet/ping/https/ssh] [on/off]
```

Syntax Description

Parameter	Description
<i>list</i>	It means to show the setting information of the access list.
<i>status</i>	It means to show the status of IPv6 management.
<i>add</i>	It means to add an IPv6 address which can be used to execute management through Internet.

<i>index</i>	It means the number (1, 2 and 3) allowed to be configured for IPv6 management.
<i>prefix</i>	It means to Enter the IPv6 address which will be used for accessing Internet.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>remove</i>	It means to remove (delete) the specified index number with IPv6 settings.
<i>flush</i>	It means to clear the IPv6 access table.
<i>http/telnet/ping/https/ssh</i>	These protocols are used for accessing Internet.
<i>on/off</i>	It means to enable (on) or disable (off) the Internet accessing through http/telnet/ping.

Example

```

> ip6 mngt list add 1 FE80::250:7FFF:FE12:1010 128
> ip6 mngt list add 2 FE80::250:7FFF:FE12:1020 128
> ip6 mngt list add 3 FE80::250:7FFF:FE12:2080 128
> ip6 mngt list
% IPv6 Access List :
Index   IPv6 Prefix      Prefix Length
=====
1       FE80::250:7FFF:FE12:1010      128
2       FE80::250:7FFF:FE12:1020      128
3       FE80::250:7FFF:FE12:2080      128

> ip6 mngt status
% IPv6 Remote Management :
telnet : off,  http : off,   ping : off

```

Telnet Command: ip6 online

This command allows you to check the online status of IPv6 LAN /WAN.

Syntax

ip6 online [ifno]

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 0=LAN1 1=WAN1 2=WAN2

Example

```

> ip6 online 0
% LAN 1 online status :
% Interface : UP
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 408, Tx bytes = 32160, Rx packets = 428, Rx bytes = 33636

```

```

> ip6 online 1
% WAN 1 online status :
% IPv6 WAN1 Disabled
% Default Gateway : ::
% UpTime : 0:00:00
% Interface : DOWN
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 0, Tx bytes = 0, Rx packets = 0, Rx bytes = 0

```

Telnet Command: ip6 aiccu

This command allows you to set IPv6 settings for WAN interface with connection type of AICCU.

Syntax

```
ip6 aiccu [ifno]
```

```
ip6 aiccu subnet [add <ifno> <prefix> <prefix-length>|remove <ifno>|show <info>]
```

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 1=WAN1 2=WAN2
<i>add</i>	It means to add an IPv6 address which can be used to execute management through Internet.
<i>prefix</i>	It means to Enter the IPv6 address which will be used for accessing Internet.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>remove</i>	It means to remove (delete) the specified index number with IPv6 settings.
<i>show</i>	It means to display the AICCU status.

Example

```

> ip6 aiccu subnet add 2 2001:1111:0000::1111 64
> ip6 aiccu 2
Status: Connecting

>ip6 aiccu subnet show 2
IPv6 WAN2 AICCU Subnet Prefix Config:
2001:1111::1111/64
>

```

Telnet Command: ip6 ntp

This command allows you to set IPv6 settings for NTP (Network Time Protocols) server.

Syntax

```
ip6 ntp -h
```

```
ip6 ntp -v
```

```
ip6 ntp -p [0/1]
```

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-v	It is used to show the NTP state.
-p <0/1>	It is used to specify NTP server for IPv6. 0 - Auto 1 - First Query IPv6 NTP Server.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
```

Telnet Command: ip6 lan

This command allows you to set IPv6 settings for LAN interface.

Syntax

```
ip6 lan -l n [-<l:w:d:D:m:o:s> <parameter> | ... ]
```

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-l n	It means to selete LAN interface to be set. n= 1: LAN1 n= 2: LAN2, ... x: LANx. Default is LAN1
-w n	It means to selete WAN interface to be primary interface. n= 0: None, n=1: WAN1 , n=2: WAN2, ... x: WANx.
-d <server>	It means to set 1st DNS Server IP. <server>= IPv6 Address
-D <server>	It means to set 2nd DNS Server IP. <server>= IPv6 Address
-m n	It means to set ipv6 LAN management. n=0:OFF n=1:SLAAC. Default is SLAAC n=2:DHCPv6
-o n	It means to enable Other option(O-bit) flag. (O-bit is redundant when management is DHCPv6) n=0: Disable n=1: Enable.
-e n	It means to add an extension WAN. n: 1: WAN1, 2: WAN2, ... x: WANx.

-E n	It means to delete an extension WAN. n: 1: WAN1 ,2: WAN2, ... x: WANx.
-b map	It means to set bit map(decimal) for extension WAN. map: bit 0: WAN1 bit 1: WAN2, ... bit n: WAN(n+1).
-f n	It means to disable IPv6. n= 1: Disable IPv6, n=0: Enable IPv6.
-R n	It means to enable /disable RIPng. n=1: Enable RIPng, n=0: Disable RIPng.
-s n	It means to show IPv6 LAN setting. n=0:show all. Default is show all. n=1: LAN1 n=2: LAN2, ... 4: LAN4, n=5: DMZ.

Example

```
> ip6 lan -l 1 -w 1 -d 2001:4860:4860::8888 -o 1 -f 0 -s 2
% Set primary WAN1!

% Set 1st DNS server 2001:4860:4860::8888

% Set Other Option Enable!

% [LAN1] support ipv6!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

% [LAN2] setting:
% Primary WAN : WAN1
% Management : SLAAC
% Other Option : Disable
% WAN Exten : None
% Subnet ID : 2
% Static IP(0) : ::/0
% [ifno: 0, enable: 0]
% Static IP(1) : ::/0
% [ifno: 0, enable: 0]
% Static IP(2) : ::/0
% [ifno: 0, enable: 0]
% Static IP(3) : ::/0
% [ifno: 0, enable: 0]
% DNS1 : 2001:4860:4860::8888
% DNS2 : 2001:4860:4860::8844
```

% ULA Type	: OFF
% RIPng	: Enable

Telnet Command: ip6 session

This command allows you to set sessions limit for IPv6 address.

Syntax

`ip6 session [on/off/default num/status/show]`

`ip6 session [add/del] [IP1-IP2] [num]`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.
<i>off</i>	It means to turn off session limit for each IP.
<i>default <num></i>	It means to set the default number of session num limit.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all IP range session limit settings.
<i>add</i>	It means to add the session limit for an IPv6 range. <IP1-IP2> - Specify a range for IPv6 addresses.
<i>del</i>	It means to delete the session limit for an IPv6 range by first IP (IP1) or 'del all'.

Example

```
> ip6 session on
> ip6 session add 2100:ABCD::2-2100:ABCD::10 100
> ip6 session status

IPv6 range:
  2100:ABCD::2 - 2100:ABCD::10 : 100

Current ip6 session limit is turn on

Current default session number is 100
```

Telnet Command: ip6 bandwidth

This command allows you to set IPv6 settings

Syntax

`ip6 Bandwidth [on/off/default tx_rate rx_rate/status/show]`

`ip6 Bandwidth [add/del] [IP1-IP2] [tx][rx][shared]`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on bandwidth limit for each IP.
<i>off</i>	It means to turn off bandwidth limit for each IP.
<i>default <tx> <rx></i>	It means to set the default transmission (tx), receiving (rx) rate of bandwidth limit (0-30000 Kbps/Mbps).
<i>status</i>	It means to display the current settings.

<i>show</i>	It means to display all IP range bandwidth limit settings.
<i>add</i>	It means to add the bandwidth limit for an IPv6 range. <IP1-IP2> - Specify a range for IPv6 addresses.
<i>del</i>	It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'.

Example

```

> ip6 bandwidth on
> ip6 bandwidth add 2001:ABCD::2-2001:ABCD::10 512 5M shared
> ip6 bandwidth status

IPv6 range:
  2001:ABCD::2 - 2001:ABCD::10 : Tx:512K Rx:5M shared

Current ip6 Bandwidth limit is turn on

Current default ip6 Bandwidth rate is Tx:2000K Rx:8000K bps

```

Telnet Command: ipf view

IPF users to view the version of the IP filter, to view/set the log flag, to view the running IP filter rules.

Syntax

`ipf view [-VcdhrtzZ]`

Syntax Description

Parameter	Description
<i>-V</i>	It means to show the version of this IP filter.
<i>-c</i>	It means to show the running call filter rules.
<i>-d</i>	It means to show the running data filter rules.
<i>-h</i>	It means to show the hit-number of the filter rules.
<i>-r</i>	It means to show the running call and data filter rules.
<i>-t</i>	It means to display all the information at one time.
<i>-z</i>	It means to clear a filter rule's statistics.
<i>-Z</i>	It means to clear IP filter's gross statistics.

Example

```

> ipf view -V -c -d
ipf: IP Filter: v3.3.1 (1824)
Kernel: IP Filter: v3.3.1
Running: yes
Log Flags: 0x80947278 = nonip
Default: pass all, Logging: available

```

Telnet Command: ipf set

This command is used to set general rule for firewall.

Syntax

`ipf set [Options]`

`ipf set [SET_NO] rule [RULE_NO] [Options]`

Syntax Description

Parameter	Description
<i>Options</i>	There are several options provided here, such as <code>-v</code> , <code>-c [SET_NO]</code> , <code>-d [SET_NO]</code> ,... and etc.
<i>SET_NO</i>	It means to specify the index number (from 1 to 12) of filter set.
<i>RULE_NO</i>	It means to specify the index number (from 1 to 7) of filter rule set.
<code>-v</code>	Type <code>"-v"</code> to view the configuration of general set.
<code>-c [SET_NO]</code>	It means to setup Call Filter, e.g., <code>-c 2</code> . The range for the index number you can type is <code>"0"</code> to <code>"12"</code> (0 means "disable").
<code>-d [SET_NO]</code>	It means to setup Data Filter, e.g., <code>-d 3</code> . The range for the index number you can type is <code>"0"</code> to <code>"12"</code> (0 means "disable").
<code>-l [VALUE]</code>	It means to setup Log Flag, e.g., <code>-l 2</code> Type <code>"0"</code> to disable the log flag. Type <code>"1"</code> to display the log of passed packet. Type <code>"2"</code> to display the log of blocked packet. Type <code>"3"</code> to display the log of non-matching packet.
<code>-p [VALUE]</code>	It means to setup actions for packet not matching any rule, e.g., <code>-p 1</code> Type <code>"0"</code> to let all the packets pass; Type <code>"1"</code> to block all the packets.
<code>-M [P2P_NO]</code>	It means to configure IM/P2P for the packets not matching with any rule, e.g., <code>-M 1</code> Type <code>"0"</code> to let all the packets pass; Type <code>"1"</code> to block all the packets.
<code>-U [URL_NO]</code>	It means to configure URL content filter for the packets not matching with any rule, e.g., <code>-U 1</code> Type <code>"0"</code> to let all the packets pass; Type <code>"1"</code> to block all the packets.
<code>-a [AD_SET]</code>	It means to configure the advanced settings.
<code>-f [VALUE]</code>	It means to accept large incoming fragmented UDP or ICMP packets.
<code>-E [VALUE]</code>	It means to set the maximum count for session limitation.
<code>-F [VALUE]</code>	It means to configure the load-balance policy.
<code>-Q [VALUE]</code>	It means to set the QoS class.

Example

```
> ipf set -c 1 #set call filter start from set 1
Setting saved.

> ipf set -d 2 #set data filter start from set 2
Setting saved.
> ipf set -v

Call Filter: Enable (Start Filter Set = 1)
Data Filter: Enable (Start Filter Set = 2)
Log Flag   : None
```

```

Telnet Command: ipf rule

This command is used to set filter rule for firewall.

Syntax

```
ipf rule s r [-<command> <parameter>] / ...
```

```
ipf rule s r -v
```

Syntax Description

Parameter	Description
<i>s</i>	Such word means Filter Set, range form 1-12.
<i>r</i>	Such word means Filter Rule, range from 1-7.
<i><Command><parameter></i>	The following lists all of the available commands with parameters.
<i>-e</i>	It means to enable or disable the rule setting. 0- disable 1- enable
<i>-s o:g <obj></i>	It means to specify source IP object and IP group. o - indicates "object". g - indicates "group". obj - indicates index number of object or index number of group. Available settings range from 1-192. For example, "-s g 3" means the third source IP group profile.
<i>-s u <Address Type> <Start IP Address> <End IP Address> / <Address Mask></i>	It means to configure source IP address including address type, start IP address, end IP address and address mask. u - It means "user defined". <i>Address Type</i> - Enter the number (representing different address type). 0 - Subnet Address 1 - Single Address

	<p>2 - Any Address 3 - Range Address</p> <p>Example: Set Subnet Address => -s u 0 192.168.1.10 255.255.255.0 Set Single Address => -s u 1 192.168.1.10 Set Any Address => -s u 2 Set Range Address => -s u 3 192.168.1.10 192.168.1.15</p>
-d u <Address Type> <Start IP Address> <End IP Address> / <Address Mask>	<p>It means to configure destination IP address including address type, start IP address, end IP address and address mask.</p> <p>u - It means "user defined".</p> <p><i>Address Type</i> - Enter the number (representing different address type).</p> <p>0 - Subnet Address 1 - Single Address 2 - Any Address 3 - Range Address</p> <p>Example: Set Subnet Address => -d u 0 192.168.1.10 255.255.255.0 Set Single Address => -d u 1 192.168.1.10 Set Any Address => -d u 2 Set Range Address => -d u 3 192.168.1.10 192.168.1.15</p>
-d o:g <obj>	<p>It means to specify destination IP object and IP group.</p> <p>o - indicates "object". g - indicates "group"</p> <p><obj>- indicates index number of object or index number of group. Available settings range from 1-192. For example, "-d g 1" means the first destination IP group profile.</p>
-S o:g <obj>	<p>It means to specify Service Type object and IP group.</p> <p>o - indicates "object". g - indicates "group"</p> <p><obj> - indicates index number of object or index number of group. Available settings range from 1-96. For example, "-S 0 1" means the first service type object profile.</p>
-S u <protocol> <source_port_value> <destination_port_value>	<p>It means to configure advanced settings for Service Type, such as protocol and port range.</p> <p>u - it means "user defined".</p> <p><protocol> - It means TCP(6),UDP(17), TCP/UDP(255).</p> <p><source_port_value> -</p> <p>1 - Port OP, range is 0-3. 0:=, 1:!=, 2:>, 3:< 3 - Port range of the Start Port Number, range is 1-65535. 5 - Port range of the End Port Number, range is 1-65535.</p> <p><destination_port_value>:</p> <p>2 - Port OP, range is 0-3, 0:==, 1:!=, 2:>, 3:< 4 - Port range of the Start Port Number, range is 1-65535. 6 - Port range of the End Port Number, range is 1-65535.</p>
-F	<p>It means the Filter action you can specify.</p> <p>0 -Pass Immediately, 1 - Block Immediately, 2 - Pass if no further match, 3 - Block if no further match.</p>
-q	<p>It means the classification for QoS.</p>

	<ul style="list-style-type: none"> 1- Class 1, 2 - Class 2, 3 - Class 3, 4 - Other
<i>-l</i>	It means load balance policy. Such function is used for "debug" only.
<i>-E</i>	It means to enable APP Enforcement.
<i>-a<index></i>	It means to specify which APP Enforcement profile will be applied. <index> - Available settings range from 0 ~ 32. "0" means no profile will be applied.
<i>-u<index></i>	It means to specify which URL Content Filter profile will be applied. <index> - Available settings range from 0 ~ 8. "0" means no profile will be applied.
<i>-c</i>	It means to set code page. Different number represents different code page. <ul style="list-style-type: none"> 0. None 1. ANSI(1250)-Central Europe 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. ANSI/OEM(874)-Thai 17. ANSI/OEM(932)-Japanese Shift-JIS 18. ANSI/OEM(936)-Simplified Chinese GBK 19. ANSI/OEM(949)-Korean 20. ANSI/OEM(950)-Traditional Chinese Big5
<i>-C <Windows Size> <Session_Timeout></i>	It means to set Window size and Session timeout (Minute). <Windows Size> - Available settings range from 1 ~ 65535. <Session_Timeout> - Make the best utilization of network resources.
<i>-v</i>	It is used to show current filter/rule settings.

Example

```

> ipf rule 2 1 -e 1 -s "o 1" -d "o 2" -S "o 1" -F 2
> ipf rule 2 1 -v

Filter Set 2 Rule 1:

Status : Enable
Comments: xNetBios -> DNS
Index(1-15) in Schedule Setup: <null>, <null>, <null>, <null>

```

```

Direction      : LAN -> WAN
Source IP      : Group1,
Destination IP: Group2,
Service Type   : TCP/UDPGroupl,
Fragments     : Don't Care

Pass or Block      : Block Immediately
Branch to Other Filter Set: None
Max Sessions Limit : 32000
Current Sessions   : 0
Mac Bind IP       : Non-Strict

Telnet Command: ipf flowtrack

This command is used to set and view flowtrack sessions.

Syntax

`ipf flowtrack set [-re]`

`ipf flowtrack view [-f]`

`ipf flowtrack [-i][-p][-t]`

Syntax Description

Parameter	Description
<code>-r</code>	It means to refresh the flowtrack.
<code>-e</code>	It means to enable or disable the flowtrack.
<code>-f</code>	It means to show the sessions state of flowtrack. If you do not specify any IP address, then all the session state of flowtrack will be displayed.
<code>-b</code>	It means to show all of IP sessions state.
<code>-i [IP address]</code>	It means to specify IP address (e.g., -i 192.168.2.55).
<code>-p[value]</code>	It means to type a port number (e.g., -p 1024). Available settings are 0 ~ 65535.
<code>-t [value]</code>	It means to specify a protocol (e.g., -t tcp). Available settings include: <i>tcp</i> <i>udp</i>

Example

```

>ipf flowtrack set -r
Refresh the flowstate ok
> ipf flowtrack view -f
Start to show the flowtrack sessions state:

ORIGIN>> 192.168.1.11:59939 ->      8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 -> 192.168.1.11:59939 ,ifno=3
          proto=17, age=93023180(3920), flag=203
ORIGIN>> 192.168.1.11:15073 ->     8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 -> 192.168.1.11:15073 ,ifno=3
          proto=17, age=93025100(2000), flag=203
ORIGIN>> 192.168.1.11: 7247 ->     8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 -> 192.168.1.11: 7247 ,ifno=3
          proto=17, age=93020100(7000), flag=203
End to show the flowtrack sessions state
> ipf flowtrack set -e
Current flow_enable=0
> ipf flowtrack set -e
Curretn flow_enable=1

```

Telnet Command: ipf flowtest

This command is used to for RD debug in firewall diagnose.

Syntax

`ipf flowtest mode [<command><parameter>|...]`

`ipf flowtest set [index][option]`

`ipf flowtest send`

`ipf flowtest view`

`ipf flowtest reset`

Syntax Description

Parameter	Description
<i>mode</i>	
<i><command> <parameter> ...</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-m [value]</i>	It means to set ICMP, UDP or TCP as flowtest mode. Value - 1, 2 or 3. In which, 1: ICMP 2: UDP 3: TCP
<i>-d [value]</i>	It means to set the original direction Value - 1 or 2. In which, 1: LAN to WAN 2: WAN to LAN
<i>-v [value]</i>	It means to choose IP version. Value - 4 or 6. In which,

	4: IPv4 6: IPv6
<i>-i [value]</i>	It means to specify IPv4 address of LAN device (e.g., 192.168.1.10).
<i>-j [value]</i>	It means to specify IPv4 address of WAN device (e.g., 8.8.8.8).
<i>-I [value]</i>	It means to specify IPv6 address of LAN device (e.g., 2001:5678:0000:0000:1319:8a2e:0370:7343).
<i>-w [value]</i>	It means to specify IPv6 address of WAN device (e.g., 2001:1234:0000:0000:1319:8a2e:0370:7344).
<i>-p [value]</i>	It means to set port number of LAN device (e.g., 65535)
<i>-q [value]</i>	It means to set port number of WAN device (e.g., 53).
<i>-e [value]</i>	It means to set MAC address of LAN device (e.g., AA:BB:CC:11:22:33).
set	
<i>[index]</i>	Index: 1 to 5.
<i>-e [value]</i>	It means to enable /disable the test packet. Value - 1 or 0. In which, 1: enable 0: disable
<i>-w [value]</i>	It means to set direction of this packet. Value - 1 or 2. In which, 1: LAN to WAN 2: WAN to LAN
<i>-y [value]</i>	It means to set the payload type of this packet. Value - 1 to 7. In which, 1: Customize 2: Echo Request 3: Echo Reply 4: Destination Unreachable 5: Ping Request 6: Pin Reply 7: Traceroute 8: DNS Query 9: Http Get
<i>-a [value]</i>	It means set payload data depending to payload type. Value - host name (e.g, www.draytek.com) or hex. stream (e.g., "6162636465666768696a6b6c6d6e6f70")
<i>-f [value]</i>	It means to set TCP flag of this packet. Value - SYN ACK PSH FIN RST URG
<i>send</i>	It means to start a test by sending each packet out.
<i>view</i>	It means to view the test information and the test result.
<i>reset</i>	It means to clear all configuration for flowtest.

Example

```
> ipf flowtest mode -m 2 -v 4 -d 1 -i 192.168.1.111 -j 8.8.8.8 -p 57005 -q
53 -e 60:E3:27:02:CB:B1
> ipf flowtest set 1 -e 1 -w 1 -y 8 -a www.draytek.com
> ipf flowtest send
Send TEST Packet
```

```

>
> ipf flowtest view
Test Info
Mode:UDP Direction:LAN->WAN

```

Telnet Command: Log

This command allows users to view log for WAN interface such as call log, IP filter log, flush log buffer, etc.

Syntax

`log [-cfhiptwx?] [-F a|c|f|w]`

Syntax Description

Parameter	Description
<code>-c</code>	It means to show the latest call log.
<code>-f</code>	It means to show the IP filter log.
<code>-F</code>	It means to show the flush log buffer. a: flush all logs c: flush the call log f: flush the IP filter log w: flush the WAN log
<code>-h</code>	It means to show this usage help.
<code>-p</code>	It means to show PPP/MP log.
<code>-t</code>	It means to show all logs saved in the log buffer.
<code>-w</code>	It means to show WAN log.
<code>-x</code>	It means to show packet body hex dump.

Example

```

> log -w
25:36:25.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
      Client IP      = 0.0.0.0
      Your IP        = 0.0.0.0

```

```

Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:33.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:41.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:49.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:57.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: ldap user

This command is used to configure the LDAP profile.

Syntax

ldap user [*INDEX*][*OPTION*]

Syntax Description

Parameter	Description
<i>INDEX</i>	Specify the index number (1 to 8) of the LDAP profile.
<i>OPTION</i>	
-n <i>VALUE</i>	Setup Profile Name.
-b <i>VALUE</i>	Setup Base Distinguished Name.
-a <i>VALUE</i>	<p>If you have added containers to be published, you may need to specify additional LDAP filters for each class of objects included in these containers.</p> <p>Creating LDAP filters is a fairly complex task that should be performed by advanced users only. LDAP filters must be RFC2254-compliant.</p> <p>For example, to exclude from publication all users who either belong to the HR department of your company or are members of the HR Group. For example:</p> <pre>>ldap user 1 -a "(!((department=HR)(memberOf=CN=HRGroup,OU=Groups,DC=acme,DC=com)))"</pre> <p>Additional Filter has been updated.</p>
-g <i>VALUE</i>	Setup Group Distinguished Name.
-c <i>VALUE</i>	Setup Common Name Identifier.
-v	View detail information of the LDAP profile.

Example

```

>ldap user 1 -n LD_user_test1
Profile Name has been updated!
> ldap user 1 -v
Profile Index:1
Profile Name:LD_user_test1
Common Name Identifier:
Base Distinguished Name:
Additional Filter:
Group distinguished Name:
>ldap user 1 -b ou=People,dc=example,dc=com

```

Telnet Command: ldap set

This command is used to set general settings (e.g., IP address, port number) for LDAP server.

Syntax

ldap set *[Options][Value]*

Syntax Description

Parameter	Description
<i>enable [0-1]</i>	Enable or disable LDAP function. 0 - Disable the function. 1 - Enable the function.
<i>type [0-2]</i>	Set the bind type as Simple(0), Anonymous(1), and Regular(2).
<i>ssl [0-1]</i>	Enable or disable LDAP function via SSL tunnel. 0 - Disable the function. 1 - Enable the function.
<i>IP <VALUE></i>	Set IP address for LDAP server.
<i>port <VALUE></i>	Set port number for LDAP server.
<i>dn <VALUE></i>	Set Regular DN value
<i>PWD <VALUE></i>	Set Regular password value.

Example

```

>ldap set enable 1
>ldap enabled.
> ldap set ssl 1
LDAP with SSL has been enabled!
> ldap set IP 192.168.100.155
LDAP Server IP has been setting.
> ldap set port 389
LDAP Server Port has been setting.
> ldap set dn dc=example,dc=com
LDAP Regular DN has been setting.
> ldap set PWD 123456
LDAP Regular Password has been setting.

```

Telnet Command: ldap view

This command is used to check current status of LDAP settings configuration.

Syntax

ldap view

Example

```
> ldap view ?
LDAP Enable:Disabled.
LDAP Bind Type:Simple
LDAP with SSL:Disabled
LDAP Regular DN:
LDAP Regular Password:
LDAP Server IP:
LDAP Server Port:389
```

Telnet Command: tacacsplus set

This command allows users to configure general settings for TACACS+ server

Syntax

`tacacspluse set [Options][Value]`

Syntax Description

Parameter	Description
<code>enable [0-1]</code>	Disable (0)/enable(1) the TACACS+ server.
<code>IP <VALUE></code>	Set the IP address of TACACS+ server.
<code>port <VALUE></code>	Set the port number of TACACS+ server.
<code>shared_secret <VALUE></code>	Set the Shared Secret value of TACACS+ Server.

Example

```
> tacacsplus set enable 1
TACACS+ enabled!
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> tacacsplus set IP 192.168.1.59
TACACS+ Server IP has been setting.
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> tacacsplus view
TACACS+ Enable:Enable.
TACACS+ Server IP:192.168.1.59
TACACS+ Server Port:49
TACACS+ Type:ASCII
TACACS+ Shared Secret:
```

Telnet Command: tacacsplus view

This command allows users to check the general settings for TACACS+ server

Syntax

`tacacspluse view`

Example

```
> tacacsplus view
TACACS+ Enable:Enable.
TACACS+ Server IP:192.168.1.59
TACACS+ Server Port:49
TACACS+ Type:ASCII
```

```
TACACS+ Shared Secret:
```

Telnet Command: mngt ftpport

This command allows users to set FTP port for management.

Syntax

```
mngt ftpport [FTP port]
```

Syntax Description

Parameter	Description
<i>FTP port</i>	It means to Enter the number for FTP port. The default setting is 21.

Example

```
> mngt ftpport 21
% Set FTP server port to 21 done.
```

Telnet Command: mngt httpport

This command allows users to set HTTP port for management.

Syntax

```
mngt httpport [Http port]
```

Syntax Description

Parameter	Description
<i>Http port</i>	It means to enter the number for HTTP port. The default setting is 80.

Example

```
> mngt httpport 80
% Set web server port to 80 done.
```

Telnet Command: mngt httpsport

This command allows users to set HTTPS port for management.

Syntax

```
mngt httpsport [Https port]
```

Syntax Description

Parameter	Description
<i>Https port</i>	It means to Enter the number for HTTPS port. The default setting is 443.

Example

```
> mngt httpsport 443
% Set web server port to 443 done.
```

Telnet Command: mngt telnetport

This command allows users to set telnet port for management.

Syntax

mngt telnetport [*Telnet port*]

Syntax Description

Parameter	Description
<i>Telnet port</i>	It means to Enter the number for telnet port. The default setting is 23.

Example

```
> mngt telnetport 23
% Set Telnet server port to 23 done.
```

Telnet Command: mngt sshport

This command allows users to set SSH port for management.

Syntax

mngt sshport [*ssh port*]

Syntax Description

Parameter	Description
<i>ssh port</i>	It means to Enter the number for SSH port. The default setting is 22.

Example

```
> mngt sshport 23
% Set ssh port to 23 done.
```

Telnet Command: mngt noping

This command is used to pass or block Ping from LAN PC to the internet.

Syntax

mngt noping [*on*]

mngt noping [*off*]

mngt noping [*viewlog*]

mngt noping [*clearlog*]

Syntax Description

Parameter	Description
<i>on</i>	All PING packets will be forwarded from LAN PC to Internet.
<i>off</i>	All PING packets will be blocked from LAN PC to Internet.
<i>viewlog</i>	It means to display a log of ping action, including source MAC and source IP.
<i>clearlog</i>	It means to clear the log of ping action.

Example

```
> mngt noping off
No Ping Packet Out is OFF!!
```

Telnet Command: mngt defenseworm

This command can block specified port for passing through the router.

Syntax

```
mngt defenseworm [on]
mngt defenseworm [off]
mngt defenseworm [add port]
mngt defenseworm [del port]
mngt defenseworm [viewlog]
mngt defenseworm [clearlog]
```

Syntax Description

Parameter	Description
<i>on</i>	It means to activate the function of defense worm packet out.
<i>off</i>	It means to inactivate the function of defense worm packet out.
<i>add port</i>	It means to add a new TCP port for block.
<i>del port</i>	It means to delete a TCP port for block.
<i>viewlog</i>	It means to display a log of defense worm packet, including source MAC and source IP.
<i>clearlog</i>	It means to remove the log of defense worm packet.

Example

```
> mngt defenseworm add 21
Add TCP port 21
Block TCP port list: 135, 137, 138, 139, 445, 21
> mngt defenseworm del 21
Delete TCP port 21
Block TCP port list: 135, 137, 138, 139, 445
```

Telnet Command: mngt rmtcfg

This command can allow the system administrators to login from the Internet. By default, it is not allowed.

Syntax

```
mngt rmtcfg [status]
mngt rmtcfg [enable]
mngt rmtcfg [disable]
mngt rmtcfg [http/https/ftp/telnet/ssh/tr069] [on/off]
```

Syntax Description

Parameter	Description
-----------	-------------

<i>status</i>	It means to display current setting for your reference.
<i>enable</i>	It means to allow the system administrators to login from the Internet.
<i>disable</i>	It means to deny the system administrators to login from the Internet.
<i>http/https/ftp/telnet/ssh/r069</i>	It means to specify one of the servers/protocols for enabling or disabling.
<i>on/off</i>	on - enable the function. off - disable the function.

Example

```

> mngt rmtcfg ftp on
Enable server fail
Remote configure function has been disabled
please enable by enter mngt rmtcfg enable

> mngt rmtcfg enable
%% Remote configure function has been enabled.
> mngt rmtcfg ftp on
%% FTP server has been enabled.

```

Telnet Command: mngt lanaccess

This command allows users to manage accessing into Vigor router through LAN port.

Syntax

```
mngt lanaccess -e [0/1] -s [value] -i [value]
```

```
mngt lanaccess -f
```

```
mngt lanaccess -d
```

```
mngt lanaccess -v
```

```
mngt lanaccess -h
```

Syntax Description

Parameter	Description
-e[0/1]	It means to enable/disable the function. 0-disable the function. 1-enable the function.
-s[value]	It means to specify service offered. Available values include: FTP, HTTP, HTTPS, TELNET, SSH, None, All
-i[value]	It means the interface which is allowed to access. Available values include: LAN2-LAN6, DMZ, IP Routed Subnet, None, All Note: LAN1 is always allowed for accessing into the router.
-f	It means to flush all of the settings.
-d	It means to restore the factory default settings.
-v	It means to view current settings.
-h	It means to get the usage of such command.

Example

```
> mngt lanaccess -e 1
> mngt lanaccess -s FTP,TELNET
> mngt lanaccess -i LAN3
>> mngt lanaccess -v
Current LAN Access Control Setting:
* Enable:Yes
* Service:
  - FTP:Yes
  - HTTP:No
  - HTTPS:No
  - TELNET:Yes
  - SSH:No
* Subnet:
  - LAN 2: disabled
  - LAN 3: enabled
  - LAN 4: disabled
  - LAN 5: disabled
  - LAN 6: disabled
  - DMZ: disabled
  - IP Routed Subnet: disabled
```

Note: the settings do NOT apply to LAN1, LAN1 is always allowed to access the router

Telnet Command: mngt echoicmp

This command allows users to reject or accept PING packets from the Internet.

Syntax

mngt echoicmp *[enable]*

mngt echoicmp *[disable]*

Syntax Description

Parameter	Description
<i>enable</i>	It means to accept the echo ICMP packet.
<i>disable</i>	It means to drop the echo ICMP packet.

Example

```
> mngt echoicmp enable
%% Echo ICMP packet enabled.
```

Telnet Command: mngt accesslist

This command allows you to specify that the system administrator can login from a specific host or network. A maximum of three IPs/subnet masks is allowed.

Syntax

mngt accesslist *list*

mngt accesslist *add [index][ip addr][mask]*

mngt accesslist *remove [index]*

mngt accesslist *flush*

Syntax Description

Parameter	Description
<i>list</i>	It can display current setting for your reference.
<i>add</i>	It means adding a new entry.
<i>index</i>	It means to specify the number of the entry.
<i>ip addr</i>	It means to specify an IP address.
<i>mask</i>	It means to specify the subnet mask for the IP address.
<i>remove</i>	It means to delete the selected item.
<i>flush</i>	It means to remove all the settings in the access list.

Example

```
> mngt accesslist add 1 192.168.1.89 255.255.255.0
%% Set OK.
> mngt accesslist list
%% Access list :
  Index IP address      Subnet mask
```

```
=====
1      192.168.1.89    255.255.255.0
```

Telnet Command: mngt snmp

This command allows you to configure SNMP for management.

Syntax

mngt snmp [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <1/2>	1: Enable the SNMP function. 2: Disable the SNMP function.
-g<Community name>	It means to set the name for getting community by typing a proper character. (max. 23 characters)
-s <Community name>	It means to set community by typing a proper name. (max. 23 characters)
-m <IP address>	It means to set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host.
-t <Community name>	It means to set trap community by typing a proper name. (max. 23 characters)
-n <IP address>	It means to set the IPv4 address of the host that will receive the trap community.
-T <seconds>	It means to set the trap timeout <0-999>.
-V	It means to list SNMP setting.

Example

```
> mngt snmp -e 1 -g draytek -s DK -m 192.168.1.1 -t trapcom -n 10.20.3.40 -T 88
SNMP Agent Turn on!!!
Get Community set to draytek
Set Community set to DK
Manager Host IP set to 192.168.1.1
Trap Community set to trapcom
Notification Host IP set to 10.20.3.40
Trap Timeout set to 88 seconds
```

Telnet Command: mngt bfp

This command allows you to configure brute force protect (BFP) for system management.

Syntax

mngt bfp [<command><parameter>|...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.

<code>-e 0/1</code>	Enable / disable the BFP function. 0 - Disable 1 - Enable
<code>-s [service]</code>	It means to enable different service. service - Available types are FTP, HTTP, HTTPS, TELNET, TR069, SSH, None and All.
<code>-l [failure]</code>	It means to set login failure retry times. failure - Available number is from 1 to 255.
<code>-p [penalty]</code>	It means to set penalty time for BFP. The unit is sec.
<code>-v</code>	It means to view current settings.

Example

```
> mngt bfp -e 1
> mngt bfp -s FTP
> mngt bfp -l 10
> mngt bfp -v
Current Brute Force Protection Setting:
* Enable: yes
* Service:
  - FTP:      yes
  - HTTP:     no
  - HTTPS:    no
  - TELNET:   no
  - TR069:    no
  - SSH:      no
* Maximum login failures: 10
* Penalty period: 0
```

Telnet Command: msubnet switch

This command is used to configure multi-subnet.

Syntax

`msubnet switch [2/3/4/5][On/Off]`

Syntax Description

Parameter	Description
<code>2/3/4/5</code>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<code>On/Off</code>	On means turning on the subnet for the specified LAN interface. Off means turning off the subnet.

Example

```
> msubnet switch 2 On
% LAN2      Subnet On!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet addr

This command is used to configure IP address for the specified LAN interface.

Syntax

`msubnet addr [2/3/4/5][IP address]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>IP address</i>	Enter the private IP address for the specified LAN interface.

Example

```
> msubnet addr 2 192.168.5.1
% Set LAN2 subnet IP address done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nmask

This command is used to configure net mask address for the specified LAN interface.

Syntax

`msubnet nmask [2/3/4/5][IP address]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>IP address</i>	Enter the subnet mask address for the specified LAN interface.

Example

```
> msubnet nmask 2 255.255.0.0
% Set LAN2 subnet mask done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet status

This command is used to display current status of subnet.

Syntax

`msubnet status [2/3/4/5]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5

Example

```
> ms subnet status 2
% LAN2      Off: 0.0.0.0/0.0.0.0, PPP Start IP: 0.0.0.60
% DHCP server: Off
% Dhcp Gateway: 0.0.0.0, Start IP: 0.0.0.10, Pool Count: 50
```

Telnet Command: ms subnet dhcps

This command allows you to enable or disable DHCP server for the subnet.

Syntax

`msubnet dhcps [2/3/4/5][On/Off]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>On/Off</i>	On means enabling the DHCP server for the specified LAN interface. Off means disabling the DHCP server.

Example

```
> ms subnet dhcps 3 off
% LAN3      Subnet DHCP Server disabled!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nat

This command is used to configure the subnet for NAT or Routing usage.

Syntax

`msubnet nat [2/3/4/5] [On/Off]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>On/Off</i>	On - It means the subnet will be configured for NAT usage. Off - It means the subnet will be configured for Routing usage.

Example

```
> > msubnet nat 2 off
% LAN2 Subnet is for Routing usage!
%Note: If you have multiple WAN connections, please be reminded to setup a
Load-Balance policy so that packets from this subnet will be forwarded to the
right WAN interface!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet gateway

This command is used to configure an IP address as the gateway used for subnet.

Syntax

`msubnet gateway [2/3/4/5] [Gateway IP]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>Gateway IP</i>	Specify an IP address as the gateway IP.

Example

```
> msubnet gateway 2 192.168.1.13
% Set LAN2 Dhcp Gateway IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet ipcnt

This command is used to defined the total number allowed for each LAN interface.

Syntax

`msubnet ipcnt [2/3/4/5] [IP counts]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>IP counts</i>	Specify a total number of IP address allowed for each LAN interface. The available range is from 0 to 220.

Example

```
> msubnet ipcnt 2 15
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet talk

This command is used to establish a route between two LAN interfaces.

Syntax

`msubnet talk [1/2/3/4/5] [1/2/3/4/5] [On/Off]`

Syntax Description

Parameter	Description
<i>1/2/3/4/5</i>	It means LAN interface. 1=LAN1 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>On/Off</i>	On - It means Off - It means

Example

```
> msubnet talk 1 2 on
% Enable routing between LAN1      and LAN2      !

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet talk ?
% msubnet talk <1/2/3/4/5> <1/2/3/4/5> <On/Off>
% where 1:LAN1, 2:LAN2, 3:LAN3, 4:LAN4, 5:LAN5
% Now:
%           LAN1  LAN2  LAN3  LAN4  LAN5
% LAN1      V
```

```

% LAN2          V
% LAN3          V
% LAN4          V
% LAN5          V
>

```

Telnet Command: msubnet startip

This command is used to configure a starting IP address for DHCP.

Syntax

`msubnet startip [2/3/4/5] [Gateway IP]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>Gateway IP</i>	Type an IP address as the starting IP address for a subnet.

Example

```

> msubnet startip 2 192.168.2.90
%Set LAN2 Dhcp Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet startip ?
% msubnet startip <2/3/4/5/6> <Gateway IP>
% Now: LAN2 192.168.2.90; LAN3 192.168.3.10; LAN4 192.168.4.10; LAN5
192.168.5.1
0; LAN6 192.168.6.10

```

Telnet Command: msubnet pppip

This command is used to configure a starting IP address for PPP connection.

Syntax

`msubnet pppip [2/3/4/5] [Start IP]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>Start IP</i>	Type an IP address as the starting IP address for PPP connection.

Example

```

> msubnet pppip 2 192.168.2.250
% Set LAN2 PPP(IPCP) Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> msubnet pppip ?
% msubnet pppip <2/3/4/5/6> <Start IP>
% Now: LAN2 192.168.2.250; LAN3 192.168.3.200; LAN4 192.168.4.200; LAN5
192.168.5.200; LAN6 192.168.6.200

```

Telnet Command: msubnet nodetype

This command is used to specify the type for node which is required by DHCP option.

Syntax

msubnet nodetype [*2/3/4/5*][*count*]

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>count</i>	Choose the following number for specifying different node type. 1= B-node 2= P-node 4= M-node 8= H-node 0= Not specify any type for node.

Example

```

> msubnet nodetype ?
% msubnet nodetype <2/3/4/5> <count>
% Now: LAN2 0; LAN3 0; LAN4 0; LAN5 0

% count: 1. B-node 2. P-node 4. M-node 8. H-node

> msubnet nodetype 2 1
% Set LAN2 Dhcp Node Type done !!!

> msubnet nodetype ?
% msubnet nodetype <2/3/4/5> <count>
% Now: LAN2 1; LAN3 0; LAN4 0; LAN5 0

% count: 1. B-node 2. P-node 4. M-node 8. H-node

```

Telnet Command: msubnet primWINS

This command is used to configure primary WINS server.

Syntax

msubnet primWINS [2/3/4/5/6] [WINS IP]

Syntax Description

Parameter	Description
2/3/4/5/6	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5 6=LAN6
WINS IP	Enter the IP address as the WINS IP.

Example

```
> msubnet primWINS 2 192.168.3.5
% Set LAN2 Dhcp Primary WINS IP done !!!

> msubnet primWINS ?
% msubnet primWINS <2/3/4/5/6> <WINS IP>
% Now: LAN2 192.168.3.5; LAN3 0.0.0.0; LAN4 0.0.0.0; LAN5 0.0.0.0; LAN6 0.0.0.0
```

Telnet Command: msubnet secWINS

This command is used to configure secondary WINS server.

Syntax

msubnet secWINS [2/3/4/5/6] [WINS IP]

Syntax Description

Parameter	Description
2/3/4/5/6	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5 6=LAN6
WINS IP	Enter the IP address as the WINS IP.

Example

```
> msubnet secWINS 2 192.168.3.89
% Set LAN2 Dhcp Secondary WINS IP done !!!

> msubnet secWINS ?
% % msubnet secWINS <2/3/4/5/6> <WINS IP>
% Now: LAN2 192.168.3.89; LAN3 0.0.0.0; LAN4 0.0.0.0; LAN5 0.0.0.0; LAN6 0.0.0.0
```

Telnet Command: msubnet tftp

This command is used to set TFTP server for multi-subnet.

Syntax

`msubnet tftp [2/3/4/5] [TFTP server name]`

Syntax Description

Parameter	Description
<i>2/3/4/5</i>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4 5=LAN5
<i>TFTP server name</i>	Type a name to indicate the TFTP server.

Example

```
> msubnet tftp ?
% msubnet tftp <2/3/4/5> <TFTP server name>
% Now: LAN2
      LAN3
      LAN4
      LAN5
      LAN6

> msubnet tftp 2 publish
% Set LAN2 TFTP Server Name done !!!

> msubnet tftp ?
% msubnet tftp <2/3/4/5> <TFTP server name>
% Now: LAN2 publish
      LAN3
      LAN4
      LAN5
```

Telnet Command: msubnet mtu

This command allows you to configure MTU value for LAN/DMZ/IP Routed Subnet.

Syntax

`msubnet mtu [interface][value]`

Syntax Description

Parameter	Description
<i>interface</i>	Available settings include LAN1~LAN6, IP_Routed_Subnet, and DMZ.
<i>value</i>	1000 ~ 1508 (Bytes), default: 1500 (Bytes)

Example

```
> msubnet mtu ?
Usage:
```

```

>msubnet mtu <interface> <value>

<interface>: LAN1~LAN5,IP_Routed_Subnet,DMZ
<value>:      1000 ~ 1496 (Bytes), default: 1500 (Bytes)

e.x: >msubnet mtu LAN1 1492

Current Settings:

LAN1 MTU:          1500 (Bytes)
LAN2 MTU:          1500 (Bytes)
LAN3 MTU:          1500 (Bytes)
LAN4 MTU:          1500 (Bytes)
LAN5 MTU:          1500 (Bytes)
DMZ MTU:           1500 (Bytes)
IP Routed Subnet MTU: 1500 (Bytes)

```

Telnet Command: msbnet leasetime

This command allows you to set leasetime for DHCP server. It is helpful to manage the IP address(es) assigned by DHCP server.

Syntax

msbnet leasetime [1/2/3/4/5/6/dmz][Lease Time (sec.)]

Syntax Description

Parameter	Description
[1/2/3/4/5/6/dmz]	1 - 6 represent LAN1 to LAN6.
Lease Time (sec.)	Range from 1 to 259200. If no value specified here, Vigor router system will use the maximum value, 259200, as the leasetime.

Example

```

> msbnet leasetime 1 80800
Set LAN1 lease time: 80800
> msbnet leasetime 1
% Set LAN1 lease time: 259200

```

Telnet Command: object ip obj

This command is used to create an IP object profile.

Syntax

- object ip obj setdefault
- object ip obj INDEX -v
- object ip obj INDEX -n NAME
- object ip obj INDEX -i INTERFACE
- object ip obj INDEX -s INVERT
- object ip obj INDEX -a TYPE [START_IP] [END/MASK_IP]

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
<i>-v</i>	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
<i>-s INVERT</i>	It means to set invert selection for the object profile. INVERT=0, means disableing the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
<i>-a TYPE</i>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i>
<i>[START_IP]</i>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.
<i>[END/MASK_IP]</i>	Type an IP address (different with START_IP) as the end IP address.

Example

```

> object ip obj 1 -n marketing
> object ip obj 1 -a 1 192.168.1.45
> object ip obj 1 -v
IP Object Profile 1
Name      :[marketing]
Interface:[Any]
Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
Invert Selection:[0]

```

Telnet Command: object ip grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

object ip grp setdefault

object ip grp *INDEX* -v

object ip grp *INDEX* -n *NAME*

object ip grp *INDEX* -i *INTERFACE*

object ip grp *INDEX* -a *IP_OBJ_INDEX*

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
-n <i>NAME</i>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
-i <i>INTERFACE</i>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
-a <i>IP_OBJ_INDEX</i>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
> object ip grp 2 -n First
IP Group Profile 2
Name    :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object ip grp 2 -i 1
> object ip grp 2 -a 1 2
IP Group Profile 2
Name    :[First]
Interface:[Lan]
```

Included ip object index:

[0:][1]

[1:][2]

[2:][0]

[3:][0]

[4:][0]

[5:][0]

[6:][0]

[7:][0]

Telnet Command: object ipv6 obj

This command is used to create an IP object profile.

Syntax

object ip obj setdefault

object ip obj *INDEX* -v

object ip obj *INDEX* -n *NAME*

object ip obj *INDEX* -i *INTERFACE*

object ip obj *INDEX* -s *INVERT*

object ip obj *INDEX* -a *TYPE* [*START_IP*] [*END/MASK_IP*]

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
-v	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
-n <i>NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
-i <i>INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
-s <i>INVERT</i>	It means to set invert selection for the object profile. INVERT=0, means disabling the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
-a <i>TYPE</i>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i>
[<i>START_IP</i>]	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.
[<i>END/MASK_IP</i>]	Type an IP address (different with <i>START_IP</i>) as the end IP address.

Example

```
> object ip obj 1 -n marketing
> object ip obj 1 -a 1 192.168.1.45
> object ip obj 1 -v
IP Object Profile 1
Name      :[marketing]
Interface:[Any]
```

```

Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
Invert Selection:[0]

```

Telnet Command: object ipv6 grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

object ip grp setdefault

object ip grp INDEX -v

object ip grp INDEX -n NAME

object ip grp INDEX -i INTERFACE

object ip grp INDEX -a IP_OBJ_INDEX

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
<i>-a IP_OBJ_INDEX</i>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```

> object ip grp 2 -n First
IP Group Profile 2
Name   :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
[8:][0]

```

```
[9:][0]
[10:][0]
[11:][0]

Set ok!
```

Telnet Command: object service obj

This command is used to create service object profile.

Syntax

object service obj setdefault

object service obj INDEX -v

object service obj INDEX -n NAME

object service obj INDEX -p PROTOCOL

object service obj INDEX -s CHK [START_P] [END_P]

object service obj INDEX -d CHK [START_P] [END_P]

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified service object profile.
<i>-v</i>	It means to view the information of the specified service object profile. Example: <i>object service obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object service obj 9 -n bruce</i>
<i>-i PROTOCOL</i>	It means to define a PROTOCOL for the service object profile. PROTOCOL =0, means any PROTOCOL =1, means ICMP PROTOCOL =2, means IGMP PROTOCOL =6, means TCP PROTOCOL =17, means UDP PROTOCOL =255, means TCP/UDP Other values mean other protocols. Example: <i>object service obj 8 -i 0</i>
<i>CHK</i>	It means the check action for the port setting. 0=equal(=), when the starting port and ending port values are the same, it indicates one port; when the starting port and ending port values are different, it indicates a range for the port and available for this service type. 1=not equal(!=), when the starting port and ending port values are the same, it indicates all the ports except the port defined here; when the starting port and ending port values are different, it indicates that all the ports except the range defined here are available for this service type. 2=larger(>), the port number greater than this value is available.. 3=less(<), the port number less than this value is available for this profile.
<i>-s CHK [START_P] [END_P]</i>	It means to set source port check and configure port range (1~65565) for TCP/UDP.

	END_P, type a port number to indicate source port. Example: <i>object service obj 3 -s 0 100 200</i>
<i>-d CHK [START_P] [END_P]</i>	It means to set destination port check and configure port range (1-65565) for TCP/UDP. END_P, type a port number to indicate destination port. Example: <i>object service obj 3 -d 1 100 200</i>

Example

```
> object service obj 1 -n limit
> object service obj 1 -p 255
> object service obj 1 -s 1 120 240
> object service obj 1 -d 1 200 220
> object service obj 1 -v
Service Object Profile 1
Name      :[limit]
Protocol:[255]
Source port check action:[!=]
Source port range:[120~240]
Destination port check action:[!=]
Destination port range:[200~220]
```

Telnet Command: object service grp

This command is used to integrate several service objects under a service group profile.

Syntax

```
object service grp setdefault
object service grp INDEX -v
object service grp INDEX -n NAME
object service grp INDEX -a SER_OBJ_INDEX
```

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object service grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the service group. NAME: Type a name with less than 15 characters. Example: <i>object service grp 8 -n bruce</i>
<i>-a SER_OBJ_INDEX</i>	It means to specify service object profiles for the group profile. Example: <i>:object service grp 3 -a 1 2 3 4 5</i> The service object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
>object service grp 1 -n Grope_1
Service Group Profile 1
Name :[Grope_1]
Included service object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object service grp 1 -a 1 2
Service Group Profile 1
Name :[Grope_1]
Included service object index:
[0:][1]
[1:][2]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
```

Telnet Command: object kw

This command is used to create keyword profile.

Syntax

```
object kw obj setdefault
object kw obj show PAGE
object kw obj INDEX -v
object kw obj INDEX -n NAME
object kw obj INDEX -a CONTENTS
```

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>show PAGE</i>	It means to show the contents of the specified profile. PAGE: Enter the page number.
<i>show</i>	It means to show the contents for all of the profiles.
<i>INDEX</i>	It means the index number of the specified keyword profile.
<i>-v</i>	It means to view the information of the specified keyword profile.
<i>-n NAME</i>	It means to define a name for the keyword profile. NAME: Type a name with less than 15 characters.
<i>-a CONTENTS</i>	It means to set the contents for the keyword profile. Example: <i>object kw obj 40 -a test</i>

Example

```
> object kw obj 1 -n children
Profile 1
Name  :[children]
Content:[]
> object kw obj 1 -a gambling
Profile 1
Name  :[children]
Content:[gambling]

> object kw obj 1 -v
Profile 1
Name  :[children]
Content:[gambling]
```

Telnet Command: object fe

This command is used to create File Extension Object profile.

Syntax

`object fe show`

`object fe setdefault`

`object fe obj INDEX -v`

`object fe obj INDEX -n NAME`

`object fe obj INDEX -e CATEGORY/FILE_EXTENSION`

`object fe obj INDEX -d CATEGORY/FILE_EXTENSION`

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number (from 1 to 8) of the specified file extension object profile.
<i>-v</i>	It means to view the information of the specified file extension object profile.
<i>-n NAME</i>	It means to define a name for the file extension object profile. NAME: Type a name with less than 15 characters.
<i>-e</i>	It means to enable the specific CATEGORY or FILE_EXTENSION.
<i>-d</i>	It means to disable the specific CATEGORY or FILE_EXTENSION
<i>CATEGORY/FILE_EXTENSION</i>	CATEGORY: Image, Video, Audio, Java, ActiveX, Compression, Execution Example: <i>object fe obj 1 -e Image</i> FILE_EXTENSION: ".bmp", ".dib", ".gif", ".jpeg", ".jpg", ".jpg2", ".jp2", ".pct", ".pcx", ".pic", ".pict", ".png", ".tif", ".tiff", ".asf", ".avi", ".mov", ".mpe", ".mpeg", ".mpg", ".mp4", ".qt", ".rm", ".wmv", ".3gp", ".3gpp", ".3gpp2", ".3g2", ".aac", ".aiff", ".au", ".mp3", ".m4a", ".m4p", ".ogg", ".ra", ".ram", ".vox", ".wav", ".wma", ".class", ".jad", ".jar", ".jav", ".java", ".jcm", ".js", ".jse",

```

".jsp", ".jtk", ".alx", ".apb", ".axs", ".ocx", ".olb", ".ole",
".tlb", ".viv", ".vrm", ".ace", ".arj", ".bzip2", ".bz2", ".cab",
".gz", ".gzip", ".rar", ".sit", ".zip", ".bas", ".bat", ".com",
".exe", ".inf", ".pif", ".reg", ".scr"
Example: object fe obj 1 -e .bmp

```

Example

```

> object fe obj 1 -n music
> object fe obj 1 -e Audio
> object fe obj 1 -v
Profile Index: 1
Profile Name:[music]

Telnet Command: object sms

This command is used to create short message object profile.

Syntax

```

object sms show
object sms setdefault
object sms obj INDEX -v
object sms obj INDEX -n NAME
object sms obj INDEX -s Service Provider
object sms obj INDEX -u Username
object sms obj INDEX -p Password
object sms obj INDEX -q Quota
object sms obj INDEX -i Interval
object sms obj INDEX -l URL

```

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 10) of the specified SMS object profile.
<i>-v</i>	It means to view the information of the specified SMS object profile.
<i>-n [NAME]</i>	It means to define a name for the SMS object profile. NAME: Type a name with less than 15 characters.
<i>-s [Service Provider]</i>	It means to specify the number of the service provider which offers the service of SMS. Different numbers represent different service provider. 0 : kotsms.com.tw (TW) 2 : textmarketer.co.uk (UK) 4 : messagemedia.co.uk (UK) 5 : bulksms.com (INT) 6 : bulksms.co.uk (UK) 7 : bulksms.2way.co.za (ZA) 8 : bulksms.com.es (ES) 9 : usa.bulksms.com (US) 10 : bulksms.de (DE) 11 : www.pswin.com (EU) 12 : www.messagebird.com (EU) 13 : www.lusosms.com (EU) 14 : www.vibeactivemedia.com (UK)
<i>-u [Username]</i>	It means to define a user name for the SMS object profile. Type a user name that the sender can use to register to selected SMS provider.
<i>-p [Password]</i>	It means to define a password for the SMS object profile. Type a password that the sender can use to register to selected SMS provider.
<i>-q [Quota]</i>	Enter the number of the credit that you purchase from the service provider. Note that one credit equals to one SMS text message on the standard route.
<i>-I [Interval]</i>	It means to set the sending interval for the SMS to be delivered. Enter the shortest time interval for the system to send SMS.
<i>-I [URL]</i>	It means to set the URL for Custom 1 and Custom 2 profiles. The profile name for Custom 1 and Custom 2 are defined in default and can not be changed.

Example

```

> object sms obj 1 -n CTC
> object sms obj 1 -n CTC
> object sms obj 1 -s 0
> object sms obj 1 -u carrie
> object sms obj 1 -p 19971125cm
> object sms obj 1 -q 2
> object sms obj 1 -i 50
> object sms obj 1 -v
Profile Index: 1
Profile Name:[CTC]
SMS Provider:[kotsms.com.tw (TW)]
Username:[carrie]
Password:[*****]
Quota:[2]
Sending Interval:[50(seconds)]

```

Telnet Command: object mail

This command is used to create mail object profile.

Syntax

object mail show
 object mail setdefault
 object mail obj *INDEX -v*
 object mail obj *INDEX -n Profile Name*
 object mail obj *INDEX -s SMTP Server*
 object mail obj *INDEX -l Use SSL*
 object mail obj *INDEX -m SMTP Port*
 object mail obj *INDEX -a Sender Address*
 object mail obj *INDEX -t Authentication*
 object mail obj *INDEX -u Username*
 object mail obj *INDEX -p Password*
 object mail obj *INDEX -i Sending Interval*

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 10) of the specified mail object profile.
<i>-v</i>	It means to view the information of the specified mail object profile.
<i>-n [Profile Name]</i>	It means to define a name for the mail object profile. <i>Profile Name:</i> Type a name with less than 15 characters.
<i>-s [SMTP Server]</i>	It means to set the IP address of the mail server.
<i>-l [Use SSL]</i>	It means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. 0 - disable 1 - enable to use the port number.
<i>-m [SMTP Port]</i>	It means to set the port number for SMTP server.
<i>-a [Sender Address]</i>	It means to set the e-mail address (e.g., johnwash@abc.com.tw) of the sender.
<i>-t Authentication</i>	The mail server must be authenticated with the correct username and password to have the right of sending message out. 0 - disable 1 - enable to use the port number.
<i>-u Username</i>	Type a name for authentication. The maximum length of the name you can set is 31 characters.
<i>-p Password</i>	Type a password for authentication. The maximum length of the password you can set is 31 characters.
<i>-i Sending Interval</i>	Define the interval for the system to send the SMS out. The unit is second.

Example

```

> object mail obj 1 -n buyer
> object mail obj 1 -n buyer
> object mail obj 1 -s 192.168.1.98
> object mail obj 1 -m 25
> object mail obj 1 -t 1
> object mail obj 1 -u john
> object mail obj 1 -p happy123456
> object mail obj 1 -i 25
> object mail obj 1 -v
Profile Index: 1
Profile Name:[buyer]
SMTP Server:[192.168.1.98]
SMTP Port:[25]
Sender Address:[]
Use SSL:[disable]
Authentication:[enable]
Username:[john]
Password:[*****]
Sending Interval:[25(seconds)]

```

Telnet Command: object noti

This command is used to create notification object profile.

Syntax

```
object noti show
object noti setdefault
object noti obj INDEX -v
object noti obj INDEX -n Profile Name
object noti obj INDEX -e Category Status
object noti obj INDEX -d Category Status
```

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 8) of the specified notification object profile.
<i>-v</i>	It means to view the information of the specified notification object profile.
<i>-n [Profile Name]</i>	It means to define a name for the notification object profile. <i>Profile Name</i> : Type a name with less than 15 characters.
<i>-e</i>	It means to enable the status of specified category.
<i>-d</i>	It means to disable the status of specified category.
<i>[Category]</i>	Available categories are: 1: WAN; 2: VPN Tunnel; 3: Temperature Alert; 4: WAN Budget; 5: CVM; 9: Security
<i>[status]</i>	For WAN - 1: Disconnected; 2: Reconnected. For VPN Tunnel - 1: Disconnected; 2: Reconnected. For Temperature Alert - 1: Out of Range. For WAN Budget - 1: Limit Reached. For CVM - 1: CPE Offline; 2: Backup Fail; 3: Restore Fail; 4: FW Update Fail; 5: VPN Profile Setup Fail. For Security - 1: 1 : Web Log-in event occurs. 2 : Telnet Log-in event occurs. 3 : SSH Log-in event occurs. 4 : TR069 Log-in event occurs. 5 : FTP User Log-in event occurs. 6 : Config-Changed event occurs.

Example

```
> object noti obj 1 -n markbei
> object noti obj 1 -e 1 1
> object noti obj 1 -e 2 1
> object noti obj 1 -e 5 3
> object noti obj 1 -e 9 1
> object noti obj 1 -v

Profile Index: 1
Profile Name:[markbei]
  Category                Status
  WAN                     [v]Disconnected      [ ]Reconnected
  VPN Tunnel              [v]Disconnected      [ ]Reconnected
  Temperature Alert       [ ]USB Temperature Out of Range
  WAN Budget Alert        [ ]Limit Reached
  Security                 [v]Web Log-in event occurs
                          [ ]Telnet Log-in event occurs
                          [ ]SSH Log-in event occurs
                          [ ]TR069 Log-in event occurs
```

```

[ ]FTP User Log-in event occurs
[ ]Config-Changed event occurs

DrayTek>

```

Telnet Command: object schedule

This command is used to create schedule object profile.

Syntax

object schedule set *INDEX* *option*

object schedule view

object schedule setdefault

Syntax Description

Parameter	Description
<i>set</i>	It means to set the schedule profile.
<i>[INDEX]</i>	It means the index number (from 1 to 15) of the specified object profile.
<i>option</i>	Available options for schedule includes: -e
<i>-e [value]</i>	It means to enable the schedule setup. 0 - disable 1 - enable
<i>-c [comment]</i>	It means to set brief description for the specified profile. The length range of the comment: 1 ~ 32 characters.
<i>-D [year][month][day]</i>	It means to set the starting date of the profile. [year] - Must be between 2000-2049. [month] - Must be between 1-12. [day] - Must be between 1-31. For example: To set Start Date 2015/10/6, type > <i>object schedule set 1 -D "2015 10 6"</i>
<i>-T [hour][minute]</i>	It means to set the starting time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Start Time 10:20, type > <i>object schedule set 1 -T "10 20"</i>
<i>-d [hour][minute]</i>	It means to set the duration time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Duration Time 3:30, type > <i>object schedule set 1 -d "3 30"</i>
<i>-a [value]</i>	It means to set the action used for the profile. [value] - 0:Force On, 1:Force Down, 2:Enable Dial-On-Demand, 3:Disable Dial-On-Demand
<i>-l [value]</i>	It means to set idle time. [value] - Must be between 0-255(minute). The default is 0.
<i>-h [option] [day]</i>	Set how often the schedule will be applied. [option] - 0: Once, 1: Weekdays [day] - Sun, Mon, Tue, Wed, Thu, Fri, Sat If the [option] set Weekdays, then must select which days of Week. example: To select Sunday, Monday, Thursday, type > <i>object schedule set 1 -h "1 Sun Mon Thu"</i>
<i>view [INDEX]</i>	It means to show the content of the profile.
<i>setdefault</i>	It means to return to default settings for all profiles.

Example

```

> object schedule set 1 -e 1
> object schedule set 1 -c Working
> object schedule set 1 -D "2016 11 8"
> object schedule set 1 -T "8 1"
> object schedule set 1 -d "2 30"
> object schedule set 1 -a 0

```

```

> object schedule set 1 -h "1 Mon Wed"
> object schedule view 1
Index No.1

-----

```

Telnet Command: port

This command allows users to set the speed for specific port of the router.

Syntax

`port [1, 2, 3, 4, wan1, wan2, all] [AN, 1000F, 100F, 100H, 10F, 10H, status]`

`port[enable,disable] [1, 2, 3, 4, all] [`

`port status`

`port sniff [on,off,port,txrx,restart,status]`

`port 802.1x[enable,disable,status,addport,delport]`

`port jumbo`

`port wanfc`

`port spoof [on, off, stat]`

`port mac_flush`

Syntax Description

Parameter	Description
<i>1, 2, 3, 4, 5, wan1, wan2, all</i>	It means the number of LAN port and WAN port.
<i>AN... 10H</i>	It means the physical type for the specific port. AN: auto-negotiate. 1000F: 1000M Full Duplex. 100F: 100M Full Duplex. 100H: 100M Half Duplex. 10F: 10M Full Duplex. 10H: 10M Half Duplex.
<i>status</i>	It means to view the Ethernet port status.
<i>wanfc</i>	It means to set WAN flow control.
<i>spoof</i>	It means to enable /disable spoofing detection. Stat - Display current spoofing status (on or off).

Example

```
> port 1 100F
%Set Port 1 Force speed 100 Full duplex OK !!!
```

Telnet Command: portmuptime

This command allows you to set a time of keeping the session connection for specified protocol.

Syntax

```
portmuptime [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-t <sec>	It means "TCP" protocol. <sec>: Type a number to set the TCP session timeout.
-u <sec>	It means "UDP" protocol. <sec>: Type a number to set the UDP session timeout.
-i <sec>	It means "IGMP" protocol. <sec>: Type a number to set the IGMP session timeout.
-w <sec>	It means "TCP WWW" protocol. <sec>: Type a number to set the TCP WWW session timeout.
-s <sec>	It means "TCP SYN" protocol. <sec>: Type a number to set the TCP SYN session timeout.
-f	It means to flush all portmaps (useful for diagnostics).
-l <List>	List all settings.

Example

```
> portmuptime -t 86400 -u 300 -i 10
> portmuptime -l
----- Current setting -----
TCP Timeout      : 86400 sec.
UDP Timeout      : 300 sec.
IGMP Timeout     : 10 sec.
TCP WWW Timeout  : 60 sec.
TCP SYN Timeout  : 60 sec.
```

Telnet Command: ppa

This command allows you to configure PPA mode.

```
ppa [-<command> <parameter> | ... ]
```

```
ppa n [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.

<code>-m <mode></code>	Specify a mode. 1=auto 2=manual(traffic) 3=manual(qos) 4=manual(specific hosts) 0=disable
<code>-p <proto></code>	Specify a protocol. proto - 1-TCP; 2-UDP; 3-Both.
<code>-b 1/0</code>	Enable/disable TWO-way hardware acceleration.
<code>-M enable/disable</code>	Enable/disable the multicast hardware acceleration.
<code>-v</code>	Show PPA_WAN_Table and PPA_LAN_Table for reference.
<code>-c</code>	Clean all settings.
ppa n - used in QoS or specific host	
<code>-l <rule></code>	Specify an index number of rule profile for QoS mode.
<code>-h <host></code>	Type an IP address for Specific Host mode.
<code>-s <start port></code>	Specify a starting port number for Specific Host mode.
<code>-e <end port></code>	Specify an ending port number for Specific Host mode

Example

```
> ppa -m 1 -p 1 -b 0
Set ok! The PPA mode is Auto

% You need to set the Manual mode first !

%TWO way accleration is disable

> ppa -v
% PPA mode is Auto
%PPA Protocol TCP 1, UDP 0
%PPA two way disable
%PPA time is 10
%PPA range is 192
%PPA LAN entries 0
%PPA WAN entries 0
```

Telnet Command: prn

This command allows you to view current status (interface and driver) of USB printer.

Syntax

`prn status`

`prn debug`

Example

```
> prn status
Interface: USB bus 2.0
Printer: NotReady

> prn debug
conn[0] :
```

```

none
conn[1] :
none
conn[2] :
none
conn[3] :
none
LPD_data_total=0

usb1p_ptr=0
UsbPrintReady=0, UsbIsPrinting=0

```

Telnet Command: qos setup

This command allows user to set general settings for QoS.

Syntax

`qos setup [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-h</i>	Type it to display the usage of this command.
<i>-m <mode></i>	It means to define which traffic the QoS control settings will apply to and enable QoS control. 0: disable. 1: in, apply to incoming traffic only. 2: out, apply to outgoing traffic only. 3: both, apply to both incoming and outgoing traffic. Default is enable (for outgoing traffic).
<i>-i <bandwidth></i>	It means to set inbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.
<i>-o <bandwidth></i>	It means to set outbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.
<i>-r <index:ratio></i>	It means to set ratio for class index, in %.
<i>-u <mode></i>	It means to enable bandwidth control for UDP. 0: disable 1: enable Default is disable.
<i>-p <ratio></i>	It means to enable bandwidth limit ratio for UDP.
<i>-t <mode></i>	It means to enable/disable Outbound TCP ACK Prioritize. 0: disable 1: enable
<i>-V</i>	Show all the settings.
<i>-D</i>	Set all to factory default (for all WANs).
<i>[...]</i>	It means that you can type in several commands in one line.

Example

```
> qos setup -m 3 -i 9500 -o 8500 -r 3:20 -u 1 -p 50 -t 1

WAN1 QoS mode is both
Wan 1 is XDSL model ,don,t need to set up
Wan 1 is XDSL model ,don,t need to set up
WAN1 class 3 ratio set to 20
WAN1 udp bandwidth control set to enable
WAN1 udp bandwidth limit ratio set to 50
WAN1 Outbound TCP ACK Prioritizel set to enable
QoS WAN1 set complete; restart QoS
>
```

Telnet Command: qos class

This command allows user to set QoS class.

Syntax

```
qos class -c [no] [-a|e|d] [no][-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-h	Type it to display the usage of this command.
-c <no>	Specify the inde number for the class. Available value for <no> contains 1, 2 and 3. The default setting is class 1.
-n <name>	It means to type a name for the class.
-a	It means to add rule for specified class.
-e <no>	It means to edit specified rule. <no>: Enter the index number for the rule.
-d <no>	It means to delete specified rule. <no>: Enter the index number for the rule.
-m <mode>	It means to enable or disable the specified rule. 0: disable, 1: enable
-l <addr>	Set the local address. <i>Addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9". <i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "-l 172.16.3.9: 172.16.3.50". <i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-l 172.16.3.9:255.255.0.0". <i>any</i> - It means Any address. Simple type "-l" to specify any address for this command.
-r <addr>	Set the remote address. <i>addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9".

	<p><i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "<i>-l 172.16.3.9: 172.16.3.50.</i>"</p> <p><i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "<i>-l 172.16.3.9:255.255.0.0".0</i></p> <p><i>any</i> - It means Any address. Simple type "<i>-l</i>" to specify any address for this command.</p>
<i>-p <DSCP id></i>	Specify the ID.
<i>-s <Service type></i>	Specify the service type by typing the number. The available types are listed as below: 1:ANY 2:DNS 3:FTP 4:GRE 5:H.323 6:HTTP 7:HTTPS 8:IKE 9:IPSEC-AH 10:IPSEC-ESP 11:IRC 12:L2TP 13:NEWS 14:NFS 15:NNTP 16:PING 17:POP3 18:PPTP 19:REAL-AUDIO 20:RTSP 21:SFTP 22:SIP 23:SMTP 24:SNMP 25:SNMP-TRAPS 26:SQL-NET 27:SSH 28:SYSLOG 29:TELNET 30:TFTP
<i>-S <d/s></i>	Show the content for specified DSCP ID/Service type.
<i>-V <1/2/3></i>	Show the rule in the specified class.
<i>[...]</i>	It means that you can type in several commands in one line.

Example

```
> qos class -c 2 -n draytek -a -m 1 -l 192.168.1.50:192.168.1.80

Following setting will set in the class2
class 2 name set to draytek
Add a rule in class2
Class2 the 1 rule enabled
Set local address type to Range, 192.168.1.50:192.168.1.80
```

Telnet Command: qos type

This command allows user to configure protocol type and port number for QoS.

Syntax

`qos type [-a <service name> | -e <no> | -d <no>].`

Syntax Description

Parameter	Description
<i>-a <name></i>	It means to add rule.
<i>-e <no></i>	It means to edit user defined service type. "no" means the index number. Available numbers are 1-40.
<i>-d <no></i>	It means to delete user defined service type. "no" means the index number. Available numbers are 1-40.
<i>-n <name></i>	It means the name of the service.
<i>-t <type></i>	It means protocol type. 6: tcp(default) 17: udp 0: tcp/udp <1-254>: other
<i>-p <port></i>	It means service port. The typing format must be [start:end] (ex., 510:330).
<i>-l</i>	List user defined types. "no" means the index number. Available

numbers are 1~40.

Example

```
> qos type -a draytek -t 6 -p 510:1330

service name set to draytek
service type set to 6:TCP
Port type set to Range
Service Port set to 510 ~ 1330
>
```

Telnet Command: qos voip

This command allows user to enable or disable the QoS for VoIP and RTP.

Syntax

qos voip [on/off]

Syntax Description

Parameter	Description
on/off	On - Enable the QoS for VoIP. Off - Disable th QoS for VoIP.

Example

```
> qos voip off
QoS for VoIP: Disable; SIP Port: 5060
```

Telnet Command: quit

This command can exit the telnet command screen.

Telnet Command: show lan

This command displays current status of LAN IP address settings.

Example

```
> show lan
The LAN settings:
      ip           mask           dhcp  star_ip           pool  gateway
-----
-----
[V]LAN1 192.168.1.1 255.255.255.0 [V] 192.168.1.10      200
192.168.1.1
[X]LAN2 192.168.2.1 255.255.255.0 [V] 192.168.2.10      100
192.168.2.1
[X]LAN3 192.168.3.1 255.255.255.0 [V] 192.168.3.10      100
192.168.3.1
[X]LAN4 192.168.4.1 255.255.255.0 [V] 192.168.4.10      100
192.168.4.1
[X]LAN5 192.168.5.1 255.255.255.0 [V] 192.168.5.10      100
192.168.5.1
[X]LAN6 192.168.6.1 255.255.255.0 [V] 192.168.6.10      100
192.168.6.1
[X]Route 192.168.0.1 255.255.255.0 [V] 0.0.0.0      0 192.168.0.1
```

Telnet Command: show dmz

This command displays current status of DMZ host.

Example

```
> show dmz
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable 172.16.3.221
2      Disable 192.168.1.65
```

Telnet Command: show dns

This command displays current status of DNS setting

Example

```
> show dns
%%     Domain name server settings:
%      Primary DNS: [Not set]
%      Secondary DNS: [Not set]
```

Telnet Command: show openport

This command displays current status of open port setting.

Example

```
> show openport
%%     Openport settings:
Index  Status  Comment          Local IP Address
*****
No data entry.
```

Telnet Command: show nat

This command displays current status of NAT.

Example

```
> show nat
Port Redirection Running Table:

Index  Protocol  Public Port  Private IP    Private Port
1      0          0           0.0.0.0       0
2      0          0           0.0.0.0       0
3      0          0           0.0.0.0       0

Telnet Command: show portmap

This command displays the table of NAT Active Sessions.

Example

```
> show portmap
-----
Private_IP:Port Pseudo_IP:Port Peer_IP:Port [Timeout/Protocol/Flag]
-----
```

Telnet Command: show pmtime

This command displays the reuse time of NAT session.

Level0: It is the default setting.

Level1: It will be applied when the NAT sessions are smaller than 25% of the default setting.

Level2: It will be applied when the NAT sessions are smaller than the eighth of the default setting.

Example

```
> show pmtime
Level0 TCP=86400001 UDP=300001 ICMP=10001
Level1 TCP=600000 UDP=90000 ICMP=7000
Level2 TCP=60000 UDP=30000 ICMP=5000
```

Telnet Command: show session

This command displays current status of current session.

Example

```
> show session
% Maximum Session Number: 10000
% Maximum Session Usage: 49
% Current Session Usage: 0
% Current Session Used(include waiting for free): 0
% WAN1 Current Session Usage: 0
```

Telnet Command: show statistic

This command displays statistics for WAN interface.

Syntax

show statistic

show statistic reset *[interface]*

Syntax Description

Parameter	Description
<i>reset</i>	It means to reset the transmitted/received bytes to Zero.
<i>interface</i>	It means to specify WAN1 -WAN5 (including multi-PVC) interface for displaying related statistics.

Example

```
> show statistic
WAN1 total TX: 0 Bytes ,RX: 0 Bytes
WAN2 total TX: 0 Bytes ,RX: 0 Bytes
WAN3 total TX: 0 Bytes ,RX: 0 Bytes
WAN4 total TX: 0 Bytes ,RX: 0 Bytes
WAN5 total TX: 0 Bytes ,RX: 0 Bytes
>
```

Telnet Command: smb setting

This command is used to configure file sharing settings for SMB server.

Syntax

smb setting *[enable/disable]*

smb setting *show status*

smb setting *set workgroup [Workgroup name]*

smb setting *set host [host name]*

smb setting *set access [LAN or LANWAN]*

Syntax Description

Parameter	Description
<i>enable/disable</i>	Enable or disable the SMB service.
<i>show status</i>	Display current status of SMB service.
<i>Set workgroup [Workgroup name]</i>	Set a name of workgroup for SMB service.
<i>set host [host name]</i>	Set a name of the host for SMB service.
<i>set access [LAN or LANWAN]</i>	Allow to access into SMB server by LAN or borth LAN and WAN.

Example

```
> smb setting enable
SMB service is enabled.

> smb setting set access LAN
Allow SMB access from LAN only.
```

```
>
```

Telnet Command: `srv dhcp dhcp2`

This command is used to enable DHCP2 server.

Syntax

```
srv dhcp dhcp2 [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<code>[<command> <parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<code>-l<enable></code>	It means to enable the LAN port to public DHCP. 0: Disable 1: Enable
<code>-m<enable></code>	It means to enable MAC address to public DHCP. 0: Disable 1: Enable
<code>-e<id></code>	It means to turn on the flag of LAN port 1/2/3/4.
<code>-d<id></code>	It means to turn off the flag of LAN port 1/2/3/4.
<code>-v</code>	It means to view current status.

Example

```
> srv dhcp dhcp2 -l 1 -e 1
> srv dhcp dhcp2 -v
2nd DHCP server flag status --
  Server works on specified MAC address: ON
  Server works on specified LAN port: ON
  Port 1 flag: ON
  Port 2 flag: ON
  Port 3 flag: OFF
  Port 4 flag: OFF
```

Telnet Command: `srv dhcp public`

This command allows users to configure DHCP server for second subnet.

Syntax

```
srv dhcp public start [IP address]
```

```
srv dhcp public cnt [IP counts]
```

```
srv dhcp public status
```

```
srv dhcp public add [MAC Addr XX-XX-XX-XX-XX-XX]
```

```
srv dhcp public del [MAC Addr XX-XX-XX-XX-XX-XX/all/ALL]
```

Syntax Description

Parameter	Description
<code>start</code>	It means the starting point of the IP address pool for the DHCP server.

<i>IP address</i>	It means to specify an IP address as the starting point in the IP address pool.
<i>cnt</i>	It means the IP count number.
<i>IP counts</i>	It means to specify the number of IP addresses in the pool. The maximum is 10.
<i>status</i>	It means the execution result of this command.
<i>add</i>	It means creating a list of hosts to be assigned.
<i>del</i>	It means removing the selected MAC address.
<i>MAC Addr</i>	It means to specify MAC Address of the host.
<i>all/ALL</i>	It means all of the MAC addresses.

Example

```
Vigor> ip route add 192.168.1.56 255.255.255.0 192.168.1.12 3 default
Vigor> srv dhcp public status
Index  MAC Address
```

Telnet Command: `srv dhcp dns1`

This command allows users to set Primary IP Address for DNS Server in LAN.

Syntax

`srv dhcp dns1 [?]`

`srv dhcp dns1 [DNS IP address]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current IP address of DNS 1 for the DHCP server.
<code>DNS IP address</code>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> srv dhcp dns1 168.95.1.1
% srv dhcp dns1 <DNS IP address>
% Now: 168.95.1.1
(IP Routed Subnet dns same as NAT Subnet dns)
```

Telnet Command: `srv dhcp dns2`

This command allows users to set Secondary IP Address for DNS Server in LAN.

Syntax

`srv dhcp dns2 [?]`

`srv dhcp dns2 [DNS IP address]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current IP address of DNS 2 for the DHCP server.
<code>DNS IP address</code>	It means the IP address that you want to use as DNS2. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> srv dhcp dns2 10.1.1.1
% srv dhcp dns2 <DNS IP address>
% Now: 10.1.1.1
(IP Routed Subnet dns same as NAT Subnet dns)
```

Telnet Command: `srv dhcp frcdnsmanl`

This command can force the router to invoke DNS Server IP address.

Syntax

```
srv dhcp frcdnsmanl [on]
```

```
srv dhcp frcdnsmanl [off]
```

Syntax Description

Parameter	Description
<code>?</code>	It means to display the current status.
<code>on</code>	It means to use manual setting for DNS setting.
<code>Off</code>	It means to use auto settings acquired from ISP.

Example

```
> srv dhcp frcdnsmanl on
% Domain name server now is using manual settings!
> srv dhcp frcdnsmanl off
% Domain name server now is using auto settings!
```

Telnet Command: `srv dhcp gateway`

This command allows users to specify gateway address for DHCP server.

Syntax

```
srv dhcp gateway [?]
```

```
srv dhcp gateway [Gateway IP]
```

Syntax Description

Parameter	Description
<code>?</code>	It means to display current gateway that you can use.
<code>Gateway IP</code>	It means to specify a gateway address used for DHCP server.

Example

```
> srv dhcp gateway 192.168.2.1
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: `srv dhcp ipcnt`

This command allows users to specify IP counts for DHCP server.

Syntax

`srv dhcp ipcnt [?]`

`srv dhcp ipcnt [IP counts]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current used IP count number.
<code>IP counts</code>	It means the number that you have to specify for the DHCP server.

Example

```
> srv dhcp ipcnt ?
% srv dhcp ipcnt <IP counts>
% Now: 150
```

Telnet Command: `srv dhcp off`

This function allows users to turn off DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp on`

This function allows users to turn on DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp relay`

This command allows users to set DHCP relay setting.

Syntax

`srv dhcp relay servip [server ip]`

`srv dhcp relay subnet [index]`

Syntax Description

Parameter	Description
<code>server ip</code>	It means the IP address that you want to used as DHCP server.
<code>Index</code>	It means subnet 1 or 2. Please type 1 or 2. The router will invoke this function according to the subnet 1 or 2 specified here.

Example

```
> srv dhcp relay servip 192.168.1.46
> srv dhcp relay subnet 2
> srv dhcp relay servip ?
% srv dhcp relay servip <server ip>
% Now: 192.168.1.46
```

Telnet Command: `srv dhcp startip`

Syntax

`srv dhcp startip [?]`

`srv dhcp startip [IP address]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current used start IP address.
<code>IP address</code>	It means the IP address that you can specify for the DHCP server as the starting point.

Example

```
> srv dhcp startip 192.168.1.53
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: `srv dhcp status`

This command can display general information for the DHCP server, such as IP address, MAC address, leased time, host ID and so on.

Example

```
> srv dhcp status
DHCP server: Relay Agent
Default gateway: 192.168.1.1
Index   IP Address   MAC Address           Leased Time   HOST ID
1       192.168.1.113 00-05-5D-E4-D8-EE    17:20:08     A1000351
```

Telnet Command: `srv dhcp leasetime`

This command can set the lease time for the DHCP server.

Syntax

`srv dhcp leasetime [?]`

`srv dhcp leasetime [Lease Time (sec)]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current leasetime used for the DHCP server.
<code>Lease Time (sec)</code>	It means the lease time that DHCP server can use. The unit is second.

Example

```
> srv dhcp leasetime ?
% srv dhcp leasetime <Lease Time (sec.)>
% Now: 86400
>
```

Telnet Command: `srv dhcp nodetype`

This command can set the node type for the DHCP server.

Syntax

`srv dhcp nodetype <count>`

Syntax Description

Parameter	Description
<i>count</i>	It means to specify a type for node. 1. B-node 2. P-node 4. M-node 8. H-node

Example

```
> srv dhcp nodetype 1
> srv dhcp nodetype ?
%% srv dhcp nodetype <count>
%% 1. B-node 2. P-node 4. M-node 8. H-node
% Now: 1
```

Telnet Command: `srv dhcp primWINS`

This command can set the primary IP address for the DHCP server.

Syntax

`srv dhcp primWINS [WINS IP address]`

`srv dhcp primWINS clear`

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of primary WINS server.
<i>clear</i>	It means to remove the IP address settings of primary WINS server.

Example

```
> srv dhcp primWINS 192.168.1.88
> srv dhcp primWINS ?
%% srv dhcp primWINS <WINS IP address>
%% srv dhcp primWINS clear
% Now: 192.168.1.88
```

Telnet Command: `srv dhcp secWINS`

This command can set the secondary IP address for the DHCP server.

Syntax

```
srv dhcp secWINS [WINS IP address]
```

```
srv dhcp secWINS clear
```

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of secondary WINS server.
<i>clear</i>	It means to remove the IP address settings of second WINS server.

Example

```
> srv dhcp secWINS 192.168.1.180
> srv dhcp secWINS ?
%% srv dhcp secWINS <WINS IP address>
%% srv dhcp secWINS clear
% Now: 192.168.1.180
```

Telnet Command: `srv dhcp expired_RecycleIP`

This command can set the time to check if the IP address can be assigned again by DHCP server or not.

Syntax

```
srv dhcp expRecycleIP <sec time>
```

Syntax Description

Parameter	Description
<i>sec time</i>	It means to set the time (5-300 seconds) for checking if the IP can be assigned again or not.

Example

```
Vigor> srv dhcp expRecycleIP 250
% DHCP expired_RecycleIP = 250
```

Telnet Command: `srv dhcp tftp`

This command can set the TFTP server as the DHCP server.

Syntax

```
srv dhcp tftp <TFTP server name>
```

Syntax Description

Parameter	Description
<i>TFTP server name</i>	It means to Enter the name of TFTP server.

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

Telnet Command: `srv dhcp tftpdel`

This command can remove the name defined for the TFTP server.

Syntax

`srv dhcp tftpdel`

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
> srv dhcp tftpdel
% The TFTP Server Name had been deleted !!!
```

Telnet Command: `srv dhcp option`

This command can set the custom option for the DHCP server.

Syntax

`srv dhcp option -h`

`srv dhcp option -l`

`srv dhcp option -d [idx]`

`srv dhcp option -e [1 or 0] -c [option number] -v [option value]`

`srv dhcp option -e [1 or 0] -c [option number] -a [option value]`

`srv dhcp option -e [1 or 0] -c [option number] -x [option value]`

`srv dhcp option -u [idx unumber]`

Syntax Description

Parameter	Description
<code>-h</code>	It means to display usage of this command.
<code>-l</code>	It means to display all the user defined DHCP options.
<code>-d[idx]</code>	It means to delete the option number by specifying its index number.
<code>-e [1 or 0]</code>	It means to enable/disable custom option feature. 1:enable 0:disable
<code>-c</code>	It means to set option number. Available number ranges from 0 to 255.
<code>-v</code>	It means to set option number by typing string.
<code>-a</code>	It means to set the option value by specifying the IP address.
<code>-x</code>	It means to set option number with the format of Hexadecimal characters.
<code>-u</code>	It means to update the option value of the sepecified index.
<code>idx number</code>	It means the index number of the option value.

Example

```
> srv dhcp option -e 1 -c 18 -v /path
> srv dhcp option -l
% state  idx interface      opt type  data

% enable 1  ALL LAN          18 ASCII  /path
```

Telnet Command: srv nat dmz

This command allows users to set DMZ host. Before using this command, please set WAN IP Alias first.

Syntax

```
srv nat dmz n m [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<i>n</i>	It means to map selected WAN IP to certain host. 1: wan1 2: wan2
<i>m</i>	It means the index number of the DMZ host. Default setting is "1" (WAN 1). It is only available for Static IP mode. If you use other mode, you can set 1 ~ 8 in this field. If WAN IP alias has been configured, then the number of DMZ host can be added more.
<i>[-<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-e</i>	It means to enable/disable such feature. 1:enable 0:disable
<i>-i</i>	It means to specify the private IP address of the DMZ host.
<i>-r</i>	It means to remove DMZ host setting.
<i>-v</i>	It means to display current status.

Example

```
> srv nat dmz 1 1 -i 192.168.1.96
> srv nat dmz -v
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable  0.0.0.0 192.168.1.96
```

Telnet Command: `srv nat ipsecpass`

This command allows users to enable or disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

Syntax

`srv nat ipsecpass [options]`

Syntax Description

Parameter	Description
<i>[options]</i>	The available commands with parameters are listed below.
<i>on</i>	It means to enable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>off</i>	It means to disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>status</i>	It means to display current status for checking.

Example

```
> srv nat ipsecpass status
%% Status: IPsec ESP pass-thru and IKE src_port:500 preservation is OFF.
```

Telnet Command: `srv nat openport`

This command allows users to set open port settings for NAT server.

Syntax

`srv nat openport n m [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>n</i>	It means the index number for the profiles. The range is from 1 to 20.
<i>m</i>	It means to specify the sub-item number for this profile. The range is from 1 to 10.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-a <enable></i>	It means to enable or disable the open port rule profile. 0: disable 1:enable
<i>-c <comment></i>	It means to Enter the description (less than 23 characters) for the defined network service.
<i>-i <local ip></i>	It means to set the IP address for local computer. Local ip: Type an IP address in this field.
<i>-w <idx></i>	It means to specify the public IP. 1: WAN1 Default, 2: WAN1 Alias 1, ...and so on.
<i>-p <protocol></i>	Specify the transport layer protocol. Available values are TCP, UDP and ALL.

<i>-s</i> <start port>	It means to specify the starting port number of the service offered by the local host. The range is from 0 to 65535.
<i>-e</i> <end port>	It means to specify the ending port number of the service offered by the local host. The range is from 0 to 65535.
<i>-v</i>	It means to display current settings.
<i>-r</i> <remove>	It means to delete the specified open port setting. remove: Enter the index number of the profile.
<i>-f</i> <flush>	It means to return to factory settings for all the open ports profiles.

Example

```
> srv nat openport 1 1 -a 1 -c games -i 192.168.1.100 -w 1 -p TCP -s 23 -e
83
> srv nat openport -v
%% Status: Enable
%% Comment: games
%% Private IP address: 192.168.1.100
Index  Protocal      Start Port      End Port
*****
  1.    TCP          23              83

%% Status: Disable
%% Comment:
%% Private IP address: 0.0.0.0
Index  Protocal      Start Port      End Port
*****

%% Status: Disable
%% Comment:
%% Private IP address: 0.0.0.0
Index  Protocal      Start Port      End Port
*****
>
```

Telnet Command: *srv nat portmap*

This command allows users to set port redirection table for NAT server.

Syntax

srv nat portmap add [idx][serv name][proto][pub port][pri ip][pri port][wan1/wan2]

srv nat portmap del [idx]

srv nat portmap disable [idx]

srv nat portmap enable [idx] [proto]

srv nat portmap flush

srv nat portmap table

Syntax Description

Parameter	Description
<i>Add[idx]</i>	It means to add a new port redirection table with an index number. Available index number is from 1 to 10.
<i>serv name</i>	It means to type one name as service name.

<i>proto</i>	It means to specify TCP or UDP as the protocol.
<i>pub port</i>	It means to specify which port can be redirected to the specified Private IP and Port of the internal host.
<i>pri ip</i>	It means to specify the private IP address of the internal host providing the service.
<i>pri port</i>	It means to specify the private port number of the service offered by the internal host.
<i>wan1/wan2</i>	It means to specify WAN interface for the port redirection.
<i>del [idx]</i>	It means to remove the selected port redirection setting.
<i>disable [idx]</i>	It means to inactivate the selected port redirection setting.
<i>enable [idx]</i>	It means to activate the selected port redirection setting.
<i>flush</i>	It means to clear all the port mapping settings.
<i>table</i>	It means to display Port Redirection Configuration Table.

Example

```

> srv nat portmap add 1 game tcp 80 192.168.1.11 100 wan1
> srv nat portmap table

NAT Port Redirection Configuration Table:

Index  Service Name  Protocol  Public Port  Private IP      Private Port ifno
1      game          6         80          192.168.1.11   100             -1
2                                     0           0              0              -2
3                                     0           0              0              -2
4                                     0           0              0              -2
5                                     0           0              0              -2
6                                     0           0              0              -2
7                                     0           0              0              -2
8                                     0           0              0              -2
9                                     0           0              0              -2
10                                    0           0              0              -2
11                                    0           0              0              -2
12                                    0           0              0              -2
13                                    0           0              0              -2
14                                    0           0              0              -2
15                                    0           0              0              -2
16                                    0           0              0              -2
17                                    0           0              0              -2
18                                    0           0              0              -2
19                                    0           0              0              -2
20                                    0           0              0              -2

Protocol: 0 = Disable, 6 = TCP, 17 = UDP

```

Telnet Command: `srv nat status`

This command allows users to view NAT Port Redirection Running Table.

Example

```

> srv nat status
NAT Port Redirection Running Table:

Index Protocol Public Port Private IP Private Port
1 6 80 192.168.1.11 100
2 0 0 0.0.0.0 0
3 0 0 0.0.0.0 0
4 0 0 0.0.0.0 0
5 0 0 0.0.0.0 0

--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: `srv nat showall`

This command allows users to view a summary of NAT port redirection setting, open port and DMZ settings.

Example

```

> srv nat showall ?
Index Proto WAN IP:Port Private IP:Port Act
*****
R01 TCP 0.0.0.0:80 192.168.1.11:100 Y
O01 TCP 0.0.0.0:23~83 192.168.1.100:23~83 Y
D01 All 0.0.0.0 192.168.1.96 Y

R:Port Redirection, O:Open Ports, D:DMZ

```

Telnet Command: `switch -i`

This command is used to obtain the TX (transmitted) or RX (received) data for each connected switch.

Syntax

`switch -i [switch idx_no] [option]`

Syntax Description

Parameter	Description
-----------	-------------

<i>switch idx_no</i>	It means the index number of the switch profile.
<i>option</i>	The available commands with parameters are listed below. <i>cmd</i> <i>acc</i> <i>traffic [on/off/status/tx/rx]</i>
<i>cmd</i>	It means to send command to the client.
<i>acc</i>	It means to set the client authentication account and password.
<i>traffic [on/off/status/tx/rx]</i>	It means to turn on/off or display the data transmission from the client.

Example

```
> switch -i 1 traffic on
External Device NO. 1 traffic statistic function is enable
```

Telnet Command: switch status

This command is used to display current status for external devices.

Example

```
> switch status
External Device auto discovery status : Disable

No Respond to External Device : Enable
```

Telnet Command: switch not_respond

This command is used to detect the external device automatically and display on this page.

Syntax

```
switch not_respond 0
```

```
switch not_respond 1
```

Syntax Description

Parameter	Description
<i>0</i>	Disable the option of "No Respond to External Device packets".
<i>1</i>	Enable the option of "No Respond to External Device packets".

Example

```
> switch not_respond 1
slave not respond!
>
```

Telnet Command: switch on

This command is used to turn on the auto discovery for external devices.

Example

```
> switch on
Enable Extrnal Device auto discovery!
```

Telnet Command: switch off

This command is used to turn off the auto discovery for external devices.

Example

```
> switch off
Disable External Device auto discovery!
```

Telnet Command: switch list

This command is used to display the connection status of the switch.

Example

```
> switch list?
No.      Mac              IP              status  Dur Time  Model_Name
-----
--
[1] 00-50-7f-cd-07-48 192.168.1.3    On-Line  00:01:01  Vigor2920
Series
```

Telnet Command: switch clear

This command is used to reset the switch table and reboot the router.

Syntax

```
switch clear [idx]
```

Syntax Description

Parameter	Description
<i>idx</i>	It means the index number of each item shown on the table. The range is from 1 to 8.
<i>-f</i>	It means to clear all of the data.

Example

```
> switch clear 1
Switch Data clear successful

> switch clear -f
Switch Data clear successful
```

Telnet Command: switch query

This command is used to enable or disable the switch query.

Example

```
> switch query on
Extern Device status query is Enable
> switch query off
Extern Device status query is Disable
```

Telnet Command: sys admin

This command is used for RD engineer to access into test mode of Vigor router.

Telnet Command: sys adminuser

This command is used to create user account and specify LDAP server. The server will authenticate the local user who wants to access into the web user interface of Vigor router.

Syntax

sys adminuser [option]

sys adminuser edit [index] username password

Syntax Description

Parameter	Description
<i>option</i>	Available options includes: Local [0-1] LDAP [0-1] edit [INDEX] delete [INDEX] view [INDEX]
<i>Local [0-1]</i>	0 - Disable the local user. 1 - Enable the local user.
<i>LDAP [0-1]</i>	0 - Disable the LDAP. 1 - Enable the LDAP.
<i>edit [INDEX] username password</i>	Edit an existed user account or create a new local user account. [INDEX] - 1 ~8. There are eight profiles to be added / edited. Username - Type a new name for local user. Password - Type a password for local user.
<i>delete [INDEX]</i>	Delete a local user account.
<i>view [INDEX]</i>	Show the user account/password detail information.

Example

```
> sys adminuser Local 1
Local User has enabled!
> sys adminuser LDAP 1
LDAP has enabled!
>> sys adminuser edit 1 carrie test123
Updated!
>> sys adminuser view 1

Index:1
```

```
User Name:carrie
User Password:test123
```

Telnet Command: sys board

This command is used to turn on or turn off the function of physical factory reset button, WLAN button, LEDs, and / or the USB ports on Vigor router.

Syntax

```
sys board button def [on/off]
sys board button wlan [on/off]
sys board led control [on/off]
sys board led sleepMode [on/off]
sys board led sleepMode time [minute]
sys board usb p1/p2 [on/off]
```

Syntax Description

Parameter	Description
<i>button def [on/off]</i>	on - It is the default value (Enabled). off - Disable the reset function of the factory reset button.
<i>button wlan [on/off]</i>	on - It is the default value (Enabled). off - Disable the ability of the Wireless button to control WLAN and WPS functions.
<i>led control [on/off]</i>	on - It is the default value (Enabled). The LEDs on the front panel is always on. off - The LEDs on the front panel is always off.
<i>led sleepMode [on/off]</i>	The function of SleepMode will be available only when LED control is set to "On". on - Enable the function of sleep mode. off - Disable the function of sleep mode.
<i>led sleepMode time [minute]</i>	Set the countdown time for the LEDs to sleep. [minute] - Enter a value (e.g., 1, 2, 3 and etc.)
<i>usb p1/p2 [on/off]</i>	on - It is the default value (Enabled). off - Disable the USB port 1 or 2.

Example

```
> sys board button ?
sys board button [def/wlan [on/off]]
The button will be invalid after turn it off.
- default button is on now.
- wlan button is on now.
> sys board button def off
default button is off now.
> sys board button def on
default button is on now.
> sys board usb p2 off
USB port2 power is off now.
> sys board led sleepMode ?
Usage:
sys board led sleepMode [on/off]
```

```

[time] [minute]
Current Setting:
  LEDs Sleep Mode is off now.
  Sleep Countdown Time : 1 minute(s)
> sys board led sleepMode on
  LEDs Sleep Mode is on now.
> sys board led sleepMode time 3
  Sleep Countdown Time set as 3 minute(s).

```

Telnet Command: sys bonjour

This command is used to disable/enable and configure the Bonjour service.

Syntax

sys bonjour [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
-e <enable>	It is used to disable/enable bonjour service (0: disable, 1: enable).
-h <enable>	It is used to disable/enable http (web) service (0: disable, 1: enable).
-t <enable>	It is used to disable/enable telnet service (0: disable, 1: enable).
-f <enable>	It is used to disable/enable FTP service (0: disable, 1: enable).
-s <enable>	It is used to disable/enable SSH service (0: disable, 1: enable).
-p <enable>	It is used to disable/enable printer service (0: disable, 1: enable).
-6 <enable>	It is used to disable/enable IPv6 (0: disable, 1: enable).

Example

```

> sys bonjour -s 1
>

```

Telnet Command: sys cfg

This command reset the router with factory default settings. When a user types this command, all the configuration will be reset to default setting.

Syntax

sys cfg default

sys cfg status

Syntax Description

Parameter	Description
default	It means to reset current settings with default values.
status	It means to display current profile version and status.

Example

```

> sys cfg status
Profile version: 3.0.0   Status: 1 (0x491e5e6c)
> sys cfg default

```

>

Telnet Command: `sys cmdlog`

This command displays the history of the commands that you have typed.

Example

```
> sys cmdlog
% Commands Log: (The lowest index is the newest !!!)
  [1] sys cmdlog
  [2] sys cmdlog ?
  [3] sys ?
  [4] sys cfg status
  [5] sys cfg ?
```

Telnet Command: `sys ftpd`

This command displays current status of FTP server.

Syntax

`sys ftpd on`

`sys ftpd off`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the FTP server of the system.
<i>off</i>	It means to turn off the FTP server of the system.

Example

```
> sys ftpd on
% sys ftpd turn on !!!
```

Telnet Command: `sys domainname`

This command can set and remove the domain name of the system when DHCP mode is selected for WAN.

Syntax

`sys domainname [wan1/wan2] [Domain Name Suffix]`

`sys domainname [wan1/wan2] clear`

Syntax Description

Parameter	Description
<i>wan1/wan2</i>	It means to specify WAN interface for assigning a name for it.
<i>Domain Name Suffix</i>	It means the name for the domain of the system. The maximum number of characters that you can set is 40.
<i>clear</i>	It means to remove the domain name of the system.

Example

```
> sys domainname wan1 clever
> sys domainname wan2 intellegent
> sys domainname ?
% sys domainname <wan1/wan2> <Domain Name Suffix (max. 40 characters)>
```

```
% sys domainname <wan1/wan2> clear
% Now: wan1 == clever, wan2 ==intelligent
>
```

Telnet Command: sys iface

This command displays the current interface connection status (UP or Down) with IP address, MAC address and Netmask for the router.

Example

```
> sys iface
Interface 0 Ethernet:
Status: UP
IP Address: 192.168.1.1      Netmask: 0xFFFFFFFF00 (Private)
IP Address: 0.0.0.0        Netmask: 0xFFFFFFFF
MAC: 00-50-7F-00-00-00
Interface 4 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-02
Interface 5 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-03
Interface 6 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-04
Interface 7 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-05
Interface 8 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-06

Interface 9 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-07
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
>
```

Telnet Command: sys name

This command can set and remove the name for the router when DHCP mode is selected for WAN.

Syntax

```
sys name [wan1] [ASCII string]
```

```
sys name [wan1] clear
```

Syntax Description

Parameter	Description
<i>wan1</i>	It means to specify WAN interface for assigning a name for it.
<i>ASCII string</i>	It means the name for router. The maximum character that you can set is 20.

Example

```
> sys name wan1 drayrouter
> sys name ?
% sys name <wan1/wan2> <ASCII string (max. 20 characters)>
% sys name <wan1/wan2> clear
% Now: wan1 == drayrouter, wan2 ==
```

Note: Such name can be used to recognize router's identification in SysLog dialog.

Telnet Command: sys passwd

This command allows users to set password for the administrator.

```
sys passwd [ASCII string]
```

Syntax Description

Parameter	Description
<i>ASCII string</i>	It means the password for administrator. The maximum character that you can set is 23.

Example

```
> sys passwd admin123
>
```

Telnet Command: sys reboot

This command allows users to restart the router immediately.

Example

```
> sys reboot
>
```

Telnet Command: sys autoreboot

This command allows users to restart the router automatically within a certain time.

Syntax

```
sys autoreboot [on/off/hour(s)]
```

Syntax Description

Parameter	Description
<i>on/off</i>	On - It means to enable the function of auto-reboot. Off - It means to disable the function of auto-reboot.
<i>hours</i>	It means to set the time schedule for router reboot. For example, if you type "2" in this field, the router will reboot with an interval of two hours.

Example

```
> sys autoreboot on
autoreboot is ON
> sys autoreboot 2
autoreboot is ON
autoreboot time is 2 hour(s)
```

Telnet Command: sys commit

This command allows users to save current settings to FLASH. Usually, current settings will be saved in SRAM. Yet, this command will save the file to FLASH.

Example

```
> sys commit
>
```

Telnet Command: sys tftpd

This command can turn on TFTP server for upgrading the firmware.

Example

```
> sys tftpd
% TFTP server enabled !!!
```

Telnet Command: sys version

This command can display current version for the system.

Example

```
> sys version
Router Model: Vigor2915Vn+   Version: 3.7.4.1 English
Profile version: 3.0.0     Status: 1 (0x49165e6c)
Router IP: 192.168.1.1     Netmask: 255.255.255.0
Firmware Build Date/Time: Mar 20 2014 14:09:50
Router Name: drayrouter
Revision: 40055 2860_374
VDSL2 Firmware Version: 05-04-08-00-00-06
```

Telnet Command: sys qrybuf

This command can display the system memory status and leakage list.

Example

```
> sys qrybuf
System Memory Status and Leakage List

Buf sk_buff ( 200B), used#: 1647, cached#: 30
Buf KMC4088 (4088B), used#: 0, cached#: 8
Buf KMC2552 (2552B), used#: 1641, cached#: 42
Buf KMC1016 (1016B), used#: 7, cached#: 1
Buf KMC504 ( 504B), used#: 8, cached#: 8
Buf KMC248 ( 248B), used#: 26, cached#: 22
Buf KMC120 ( 120B), used#: 67, cached#: 61
Buf KMC56 ( 56B), used#: 20, cached#: 44
Buf KMC24 ( 24B), used#: 58, cached#: 70
Dynamic memory: 13107200B; 4573168B used; 190480B/0B in level 1/2 cache.

FLOWTRACK Memory Status
# of free = 12000
# of maximum = 0
# of flowstate = 12000
# of lost by siganture = 0
# of lost by list = 0
```

Telnet Command: sys pollbuf

This command can turn on or turn off polling buffer for the router.

Syntax

```
sys pollbuf [on]
```

```
sys pollbuf [off]
```

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on pulling buffer.
<i>off</i>	It means to turn off pulling buffer.

Example

```
> sys pollbuf on
% Buffer polling is on!

> sys pollbuf off
% Buffer polling is off!
```

Telnet Command: sys britask

This command can improve triple play quality.

Syntax

sys britask *[on]*

sys britask *[off]*

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the bridge task for improving the triple play quality.
<i>off</i>	It means to turn off the bridge task.

Example

```
> sys britask on
% bridge task is ON, now
```

Telnet Command: sys tr069

This command can set CPE settings for applying in VigorACS.

Syntax

sys tr069 get *[parm] [option]*

sys tr069 set *[parm] [value]*

sys tr069 getnoti *[parm]*

sys tr069 setnoti *[parm] [value]*

sys tr069 log

sys tr069 debug *[on/off]*

sys tr069 save

sys tr069 inform *[event code]*

sys tr069 port *[port num]*

sys tr069 cert_auth *[on/off]*

Syntax Description

Parameter	Description
<i>get [parm] [option]</i>	It means to get parameters for tr-069. option=<nextlevel>: only gets nextlevel for GetParameterNames.
<i>set [parm] [value]</i>	It means to set parameters for tr-069.
<i>getnoti [parm]</i>	It means to get parameter notification value.
<i>setnoti [parm] [value]</i>	It means to set parameter notification value.
<i>log</i>	It means to display the TR-069 log.
<i>debug [on/off]</i>	on: turn on the function of sending debug message to syslog. off: turn off the function of sending debug message to syslog.
<i>save</i>	It means to save the parameters to the flash memory of the router.
<i>Inform [event code]</i>	It means to inform parameters for tr069 with different event codes.

	[event code] includes: 0-"0 BOOTSTRAP", 1-"1 BOOT", 2-"2 PERIODIC", 3-"3 SCHEDULED", 4-"4 VALUE CHANGE", 5-"5 KICKED", 6-"6 CONNECTION REQUEST", 7-"7 TRANSFER COMPLETE", 8-"8 DIAGNOSTICS COMPLETE", 9-"M Reboot"
<i>port [port num]</i>	It means to change tr069 listen port number.
<i>cert_auth [on/off]</i>	on: turn on certificate-based authentication. off: turn off certificate-based authentication.

Example

```

> sys tr069 get Int. nextlevel
Total number of parameter is 24
Total content length of parameter is 915
InternetGatewayDevice.LANDeviceNumberOfEntries
InternetGatewayDevice.WANDeviceNumberOfEntries
InternetGatewayDevice.DeviceInfo.

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: sys sip_alg

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

Syntax

```
sys sip_alg [1]
```

```
sys sip_alg [0]
```

Syntax Description

Parameter	Description
1	It means to turn on SIP ALG.
0	It means to turn off SIP ALG.

Example

```
> sys sip_alg ?
usage: sys sip_alg [value]
 0 - disable SIP ALG
 1 - enable SIP ALG
current SIP ALG is disabled
```

Telnet Command: sys rtsp_alg

This command is used to configure settings (e.g., listen port) for ALG with the protocol of RTSP.

Syntax

```
sys rtsp_alg [<command> <parameter>]
```

Syntax Description

Parameter	Description
-e [1/0]	Enable / disable the function of RTSP ALG. 0 - Disable. 1 - Enable.
-p [value]	Set your listening port for RTSP ALG.
-u [1/0]	Enable / disable listen along UDP path. 0 - Disable. 1 - Enable.
-t [1/0]	Enable / disable listen along TCP path. 0 - Disable. 1 - Enable.
-v	Display RTP and RTSP portmap information of RTSP ALG.

Example

```
> sys rtsp_alg -e 1
Auto enable ALG Master Switch

Enable RTSP ALG

> sys rtsp_alg -p 375
Current listening RTSP Port: 375
```

```
> sys rtsp_alg -v
Current Open PortMap Number of RTSP ALG: 0
```

Telnet Command: sys license

This command can process the system license.

Syntax

```
sys license licmsg
sys license licauth
sys license regser
sys license licera
sys license licifno
sys license lic_wiz [set/reg/qry]
sys license dev_chg
sys license dev_key
```

Syntax Description

Parameter	Description
<i>licmsg</i>	It means to display license message.
<i>licauth</i>	It means the license authentication time setting.
<i>regser</i>	It means the license register server setting.
<i>licera</i>	It means to erase license setting.
<i>licifno</i>	It means license and signature download interface setting.
<i>lic_wiz</i> [<i>set/reg/qry</i>]	It means the license wizard setting. qry: query service support status set [idx] [trial] [service type] [sp_id] [start_date] [License Key] reg: register service in portal
<i>dev_chg</i>	It means to change the device key.
<i>dev_key</i>	It means to show device key.

Example

```
> sys license licifno

License and Signature download interface setting:
licifno [AUTO/WAN#]

Ex: licifno wan1

Download interface is "auto-selected" now.
```

Telnet Command: sys fr_log

This command is used for displaying log information related to web syslog.

Syntax

sys fr_log

Example

```
> sys fr_log ?
```

Note: This command shows the same log information with Diagnostics>>Syslog Explorer. If you don't see any log information, go to the Web Interface and make sure Diagnostics>>Syslog Explorer is enabled.

Telnet Command: sys diag_log

This command is used for RD debug.

Syntax

sys diag_log [*status* | *enable* | *disable* | *flush* | *lineno* [*w*] | *level* [*x*] | *feature* [*on/off*] [*y*] | *log*]

Syntax Description

Parameter	Description
<i>status</i>	It means to show the status of diagnostic log.
<i>enable</i>	It means to enable the function of diag_log.
<i>disable</i>	It means to disenable the function of diag_log.
<i>flush</i>	It means the flush log buffer.
<i>lineno</i> [<i>w</i>]	It means the total lines for displaying message. w - Available value ranges from 100 to 50000.
<i>level</i> [<i>x</i>]	It determines the level of data displayed. x - Available value ranges from 0 to 12. The larger the number is, the detailed the data is displayed.
<i>feature</i> [<i>on/off</i>][<i>y</i>]	It is used to specify the function of the log. Supported features include SYS and DSL (Case-Insensitive). Default setting is "on" for "DSL".
<i>voip_feature</i> [<i>on/off</i>][<i>vf_name</i>]	It means VoIP feature. Type on to enable the feature or type off to disable the feature. vf_name: available settings include DRVTAPI, DRVMMC, DRVMPS, DRVFXO, DRVHAL, PSMPHONE, PSMSUPP, PSM, FXO, PSMISDN, DTMFPSE, CALLERID (Case-Insensitive).
<i>log</i>	It means the dump log buffer.

Example

```
> sys diag_log status
Status:
diag_log is Enabled.
```

```

lineno : 10000.
level : 3.
Enabled feature: SYS DSL
> sys diag_log log
0:00:02 [DSL] Current modem firmware: AnnexA_548006_544401
0:00:02 [DSL] Modem firmware feature: 5, ADSL_A, VDSL2
0:00:02 [DSL] xtseCfg=04 00 04 00 0c 01 00 07
0:00:02 [DSL] don't have last showtime mode!! set next mode to VDSL!!
0:00:02 [DSL] Status has changed: Stopped(0) -> FwWait(3)

=2
0:00:05 [DSL] Line state has changed: 000000FF -> 00000100
0:00:05 [DSL] Line state has changed: 00000100 -> 00000200
0:00:05 [DSL] Status was switched: Init(5) to Train(6)

```

Telnet Command: sys arp_AutoReq

This command is used to enable / disable the function that Vigor router sends ARP request to the connected device(s) periodically.

Syntax

```
sys arp_AutoReq -d [value]
```

Syntax Description

Parameter	Description
<i>-d [value]</i>	Disable the function of ARP auto request. 0 - Enable 1 - Disable

Example

```

> sys arp_AutoReq -d 0
Arp auto-request enable.

```

Telnet Command: sys daylightsave

This command is used to configure daylight save setting.

Syntax

sys daylightsave [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command><parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-v	Display the daylight saving settings.
-r	Set to factory default setting.
-e [1/0]	Enable (1) / disable (0) daylight saving.
-t [0/1/2]	Specify the saving type for daylight setting. 0 - Default 1 - Time range 2 - Yearly
-s <year> <month> <day> <hour>	Set the detailed settings of the starting day for time range type. year - must be the year after 2013. month - 1 ~ 12 day - 1 ~ 31 hour - 0 ~ 23 e.g., sys daylightsave -s 2014 3 10 12
-d <year> <month> <day> <hour>	Set the detailed settings of the ending day for time range type. year - After 2013. month - 1 ~ 12 day - 1 ~ 31 hour - 0 ~ 23 e.g., sys daylightsave -d 2014 9 10 12
-y <month> <th weekday> <day in week> <hour>	Set the detailed settings of the starting day for yearly type. month - 1 ~ 12 th weekday - 1 ~ 5, 9: last week day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour - 0 ~ 23 e.g, sys daylightsave -y 9 1 0 14
-z <month> <th weekday> <day in week> <hour>	Set the detailed settings of the ending day for yearly type. month - 1 ~ 12 th weekday - 1 ~ 5, 9: last week day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour - 0 ~ 23 e.g, sys daylightsave -z 3 1 6 14

Example

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
```

Telnet Command: sys dnsCacheTbl

This command is used to configure TTL settings which will be displayed in DNS Cache table.

Syntax

sys dnsCacheTbl [*<command><parameter>/...*]

Syntax Description

Parameter	Description
<i>[<command><parameter>/...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-l</i>	Display DNS IPv4 entry in the DNS cache table.
<i>-s</i>	Display DNS IPv6 entry in the DNS cache table.
<i>-v</i>	Display the TTL limit value in the DNS cache table.
<i>-t <0/n ></i>	Set the TTL limit value in the DNS cache table. 0- No limit N - Greater than or equal to 5.
<i>-c</i>	Clear the DNS cache table.

Example

```
> sys dnsCacheTbl -l
%DNS Cache Table List
> sys dnsCacheTbl -t 65
% Set TTL limit: 65 seconds.
% When TTL larger than 65s , delete the DNS entry in the router's DNS cache
tabl
e.
>
```

Telnet Command: sys syslog

This command is used to configure

Syntax

sys syslog *-a <enable> [-<command> <parameter> | ...]*

Syntax Description

Parameter	Description
<i>[<command><parameter>/...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-a <1/0></i>	Enable (1) or disable (0) Syslog Access Setup.
<i>-s <1/0></i>	Enable (1) or disable (0) Syslog Save to Syslog Server.
<i>-i <IP address></i>	Define the IP address of the Syslog server.
<i>-d <port number></i>	Define the port number (1 ~ 65535) as the destination port.
<i>-u <1/0></i>	Enable (1) or disable (0) Syslog Save to USB Disk.
<i>-m <1/0></i>	Enable (1) or disable (0) Mail Syslog.
<i>-f <1/0></i>	Enable (1) or disable (0) Firewall Log.
<i>-v <1/0></i>	Enable (1) or disable (0) VPN Log.

-e <1/0>	Enable (1) or disable (0) User Access Log.
-c <1/0>	Enable (1) or disable (0) Call Log.
-w <1/0>	Enable (1) or disable (0) WAN Log.
-r <1/0>	Enable (1) or disable (0) Router/DSL Information.
-t <1/0>	Enable (1) or disable (0) AlertLog Setup.
-o <port number>	Define the port number (1 ~ 65535) for AlertLog.

Example

```
> sys syslog -a 1 -s 1 -i 192.168.1.25 -d 514
>
```

Telnet Command: sys mailalert

This command is used to configure settings for syslog mail alert.

Syntax

sys mailalert [-<command> <parameter>]

Syntax Description

Parameter	Description
[<command><parameter>]	The available commands with parameters are listed below.
-e [0/1]	Enable/disable Mail Alert. 0 - Disable. 1 - Enable.
-i [SMTP Server IP]	Set IP Address for SMTP server.
-o [SMTP Server Port]	Set port number for SMTP server.
-a [Mail Address]	Set E-mail address for alert mail receiver.
-r [Mail Address]	Set E-mail Address for mail return.
-s [0/1]	Enable/disable the function of Use SSL. 0 - Disable. 1 - Enable.
-h [0/1]	Enable/disable SMTP Authentication. 0 - Disable. 1 - Enable.
-u [Username]	Set username for SMTP Authentication.
-p [Password]	Set password for SMTP Authentication.
-l [type][0/1]	Enable / disable mail alert for different types. Number 0 ~ 6 represent different types. "0 <0/1>" : Enable/Disable Mail Alert of the DoS Attack. "1 <0/1>" : Enable/Disable Mail Alert of the APPE. "2 <0/1>" : Enable/Disable Mail Alert of the VPN Log. "3 <0/1>" : Enable/Disable Mail Alert of the APPE Signature. "6 <0/1>" : Enable/Disable Mail Alert of the Reboot Debug Log. In which, 0 - Disable. 1 - Enable.
-f	Reset Mail Alert setting to factory default.
-v	Show current Mail Alert setting.
-R [0/1]	Set Mail Alert Reboot debug log mode. 0: Limited Mode 1: Unlimited Mode.

Example

```

> sys mailalert -e 1
Set Enable Mail Alert.
> sys mailalert -v
----- Current setting for Mail Alert -----
Mail Alert: Enable
SMTP Server IP Address: 0.0.0.0
SMTP Server Port: 25
Alert Mail Reciver E-maill Address:
Mail Return E-mail Address:
Use SSL: Disable
SMTP Authentication: Disable
Username for SMTP Authentication:
Password for SMTP Authentication:
Mail Alert for DoS Attack: Enable.
Mail Alert for APPE: Enable.
Mail Alert for VPN Log: Enable.
Mail Alert for APPE Signature: Disable.
Mail Alert for Reboot Debug Log: Disable, Mode: Limited.
-----

```

Telnet Command: sys time

This command is used to configure system time and date.

Syntax

`sys time server [domain]`

`sys time inquire`

`sys time show`

`sys time zone [index]`

Syntax Description

Parameter	Description
<i>domain</i>	Enter the domain name of the time server. The maximum length is 39 characters.
<i>index</i>	Different number means different time zone. 1 - GMT-12:00 Eniwetok, Kwajalein 2 - GMT-11:00 Midway Island, Samoa 3 - GMT-10:00 Hawaii 4 - GMT-09:00 Alaska 5 - GMT-08:00 Pacific Time (US & Canada) 6 - GMT-08:00 Tijuana 7 - GMT-07:00 Mountain Time (US & Canada) 8 - GMT-07:00 Arizona 9 - GMT-06:00 Central Time (US & Canada) 10 - GMT-06:00 Saskatchewan 11 - GMT-06:00 Mexico City, Tegucigalpa 12 - GMT-05:00 Eastern Time (US & Canada) 13 - GMT-05:00 Indiana (East) 14 - GMT-05:00 Bogota, Lima, Quito 15 - GMT-04:00 Atlantic Time (Canada) 16 - GMT-04:00 Caracas, La Paz 17 - GMT-04:00 Santiago 18 - GMT-03:30 Newfoundland 19 - GMT-03:00 Brasilia 20 - GMT-03:00 Buenos Aires, Georgetown 21 - GMT-02:00 Mid-Atlantic

22 - GMT-01:00 Azores, Cape Verde Is.
 23 - GMT Greenwich Mean Time : Dublin
 24 - GMT Edinburgh, Lisbon, London
 25 - GMT Casablanca, Monrovia
 26 - GMT+01:00 Belgrade, Bratislava
 27 - GMT+01:00 Budapest, Ljubljana, Prague
 28 - GMT+01:00 Sarajevo, Skopje, Sofija
 29 - GMT+01:00 Warsaw, Zagreb
 30 - GMT+01:00 Brussels, Copenhagen
 31 - GMT+01:00 Madrid, Paris, Vilnius
 32 - GMT+01:00 Amsterdam, Berlin, Bern
 33 - GMT+01:00 Rome, Stockholm, Vienna
 34 - GMT+02:00 Bucharest
 35 - GMT+02:00 Cairo
 36 - GMT+02:00 Helsinki, Riga, Tallinn
 37 - GMT+02:00 Athens, Istanbul, Minsk
 38 - GMT+02:00 Jerusalem
 39 - GMT+02:00 Harare, Pretoria
 40 - GMT+03:00 Volgograd
 41 - GMT+03:00 Baghdad, Kuwait, Riyadh
 42 - GMT+03:00 Nairobi
 43 - GMT+03:00 Moscow, St. Petersburg
 44 - GMT+03:30 Tehran
 45 - GMT+04:00 Abu Dhabi, Muscat
 46 - GMT+04:00 Baku, Tbilisi
 47 - GMT+04:30 Kabul
 48 - GMT+05:00 Ekaterinburg
 49 - GMT+05:00 Islamabad, Karachi, Tashkent
 50 - GMT+05:30 Bombay, Calcutta
 51 - GMT+05:30 Madras, New Delhi
 52 - GMT+06:00 Astana, Almaty, Dhaka
 53 - GMT+06:00 Colombo
 54 - GMT+07:00 Bangkok, Hanoi, Jakarta
 55 - GMT+08:00 Beijing, Chongqing
 56 - GMT+08:00 Hong Kong, Urumqi
 57 - GMT+08:00 Singapore
 58 - GMT+08:00 Taipei
 59 - GMT+08:00 Perth
 60 - GMT+09:00 Seoul
 61 - GMT+09:00 Osaka, Sapporo, Tokyo
 62 - GMT+09:00 Yakutsk
 63 - GMT+09:30 Darwin
 64 - GMT+09:30 Adelaide
 65 - GMT+10:00 Canberra, Melbourne, Sydney
 66 - GMT+10:00 Brisbane
 67 - GMT+10:00 Hobart
 68 - GMT+10:00 Vladivostok
 69 - GMT+10:00 Guam, Port Moresby
 70 - GMT+11:00 Magadan, Solomon Is.
 71 - GMT+11:00 New Caledonia
 72 - GMT+12:00 Fiji, Kamchatka, Marshall Is.
 73 - GMT+12:00 Auckland, Wellington

Example

```

> sys time zone 8
Set Time Zone OK

> sys time show
***** System Time *****
Current System Time: [2000 Jan 01 Sat 02:09:29]
Time Server: [pool.ntp.org]
Time Zone Index: [8]. GMT-07:00
*****
  
```

Telnet Command: sys eap_tls

This command is used to disable or enable EAP-TLS.

You might have to enable EAP-TLS compatibility to avoid compatibility issues with some operating systems. But, please note that enabling EAP-TLS compatibility will lower down the connection security level.

Syntax

```
sys eap_tls set [0/1]
```

Syntax Description

Parameter	Description
0	Disable EAP-TLS compatibility!
1	Enable EAP-TLS compatibility!

Example

```
> sys eap_tls set 1
Enable EAP_TLS compatibility!
```

Telnet Command: sys dashboard

This command is used to display / hide items (such as System Information, Interface...) on dashboard.

Syntax

```
sys dashboard [-<command> <value> | ... ]
```

```
sys dashboard show
```

Syntax Description

Parameter	Description
[<command> <value> ...]	The available commands with parameters are listed below. [...] means that you can type in several parameters in one line. <command> "0 ~ 9" and "a" represent different sections to be displayed on the dashboard. 0 : Front Panel 1 : System Information 2 : IPv4 LAN Information 3 : IPv4 Internet Access 4 : IPv6 Internet Access 5 : Interface 6 : Security 7 : System Resource 8 : LTE Status 9 : Quick Access a : VoIP <value> 1 : Enable 0 : Disable
show	Display current status (enabled /disabled) for each item.

Example

```
> sys dashboard -0 1
Front Panel enabled
> sys dashboard show
Front Panel enabled
System Information enabled
IPv4 LAN Information enabled
IPv4 Internet Access enabled
IPv6 Internet Access enabled
Interface enabled
Security enabled
System Resource enabled
LTE Status enabled
Quick Access enabled
VoIP enabled
```

Telnet Command: testmail

This command is used to display current settings for sending test mail.

Example

```
> testmail
Send out test mail
Mail Alert:[Disable]
SMTP_Server:[0.0.0.0]
Mail to:[]
Return-Path:[]
```

Telnet Command: upnp off

This command can close UPnP function.

Example

```
>upnp off
UPNP say bye-bye
```

Telnet Command: upnp on

This command can enable UPnP function.

Example

```
>upnp on
UPNP start.
```

Telnet Command: upnp nat

This command can display IGD NAT status.

Example

```
> upnp nat ?
***** IGD NAT Status *****
```

```

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: upnp service

This command can display the information of the UPnP service. UPnP service must be enabled first.

Example

```

> upnp on
UPNP start.

> upnp service
>>>> SERVICE TABLE1 <<<<<
  serviceType urn:schemas-microsoft-com:service:OSInfo:1

time >>0<<
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: upnp wan

This command is used to specify WAN interface to apply UPnP.

Syntax

upnp wan [*n*]

Syntax Description

Parameter	Description
<i>n</i>	It means to specify WAN interface to apply UPnP. n=0, it means to auto-select WAN interface. n=1, WAN1 n=2, WAN2

Example

```

> upnp wan 1
use wan1 now.

```

Telnet Command: usb list

This command is use to display the information about the brand name and model name of the USB modems which are supported by Vigor router.

Example

```

> usb list ?
Brand      Module                Standard
-----

Telnet Command: usb user

This command is used to set profiles for FTP/SMB users.

Syntax Description

`usb user add [Index] [Username] [Password] [Permission] [Home path]`

`usb user rm [Index]`

`usb user enable [Index]`

`usb user disable [Index]`

`usb user list`

Syntax Description

Parameter	Description
<i>add</i>	Add a new user profile.
<i>Rm</i>	Delete an existed user profile.
<i>enable</i>	Enable a user profile.
<i>disable</i>	Disable a user profile.
<i>list</i>	Display all of the user profile.
<i>index</i>	It means the index number of the user profile. There are 16 profiles allowed to be configured. So the range of such option is 1 ~ 16.
<i>Username</i>	Type a text (maximum 11 characters) as the username for the user profile.
<i>Password</i>	Type a text (maximum 11 characters) as the password for the user profile.
<i>Permission</i>	Specify the action (RWDLCR) permitted. If one of the actions is not allowed, simple type "-" instead. R - Read File. W - Write File. D - Delete File. L - List directory. C - Create directory. R - Remove selected directory.
<i>Home path</i>	Set the path (maximum 159 characters) for the USB user profile.

Example

```
> usb user add 1 root 1234 R-DLCR /usr
```

Telnet Command: `vigbrg set`

This command is to configure specified WAN as bridge mode.

Syntax Description

```
vigbrg set -v [IP version] -w [WAN_idx] -l [LAN_idx] -e [0/1] -f [0/1]
```

Syntax Description

Parameter	Description
<code>-v [IP version]</code>	Indicate the IP version for the IP address. 4 - IPv4. 6 - IPv6.
<code>-w [WAN_idx]</code>	WAN_idx - Indicate the WAN interface. 1 - WAN1 2 - WAN2 3 - WAN3 4 - WAN4
<code>-l [LAN_idx]</code>	LAN_idx - Indicate the LAN interface. 1 - LAN1 2 - LAN2 3 - LAN3 4 - LAN4
<code>e [0/1]</code>	Enable (1) or disable (0) the Vigor Bridge for WAN or/and LAN.
<code>f [0/1]</code>	Enable (1) or disable (0) the firewall functions.

Example

```
> vigbrg set -v 4 -w 1 -l 1 -e 1  
[WAN1] IPv4 bridge is enable. Set subnet[LAN1]
```

Telnet Command: `vigbrg status`

This command can show whether the Vigor Bridge Function is enabled or disabled.

Example

```
> vigbrg status  
%Vigor Bridge Function is enable!  
  
%Wan1 management is disable!
```

Telnet Command: `vigbrg cfigip`

This command allows users to transfer a bridge modem into ADSL router by accessing into and adjusting specified IP address. Users can access into Web UI of the router to manage the router through the IP address configured here.

Syntax

`vigbrg cfigip [IP Address]`

Syntax Description

Parameter	Description
<code>IP Address</code>	It means to type an IP address for users to manage the router.

Example

```
> vigbrg cfigip 192.168.1.15
> vigbrg cfigip ?
% Vigor Bridge Config IP,
% Now: 192.168.1.15
```

Telnet Command: `vigbrg wanstatus`

This command can display the existed WAN connection status for the modem (change from ADSL router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function..

Example

```
> vigbrg wanstatus
Vigor Bridge: Running
WAN mac table:
Index  MAC Address                Stamp Time          PVC                VLan
      Port
```

Telnet Command: `vigbrg wlanstatus`

This command can display the existed WLAN connection status for the modem (change from router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wlanstatus
Vigor Bridge: Running
WAN mac table:
Index  MAC Address                Stamp Time          PVC                VLan    Port
```

Telnet Command: `vlan group`

This command allows you to set VLAN group. You can set four VLAN groups. Please run `vlan restart` command after you change any settings.

Syntax

`vlan group id [set/set_ex] [p1/p2/p3/p4/s1/s2/s3/s4]`

Syntax Description

Parameter	Description
-----------	-------------

<i>id</i>	It means the group 0 to 7 for VLAN.
<i>set</i>	It indicates each port can join more than one VLAN group.
<i>set_ex</i>	It indicates each port can join one VLAN group at one time.
<i>p1/p2/p3/p4</i>	It indicates LAN port 1 to LAN port 4. To group LAN1, LAN2, LAN3 and/or LAN4 under one VLAN group, please Enter the port number(s) you want.
<i>s1/s2/s3/s4</i>	It is only available for WALN models.

Example

```
> vlan group 3 set p1 s3 s4
VLAN  p1  p2  p3  p4  s1  s2  s3  s4
-----
   3   V                V   V
>
```

Telnet Command: vlan off

This command allows you to disable VLAN function.

Syntax

vlan off

Example

```
> vlan off
VLAN is Disable!
Force subnet LAN2/3/4 to be disabled!!
```

Telnet Command: vlan on

This command allows you to enable VLAN function.

Syntax

vlan on

Example

```
> vlan on
VLAN is Enable!
```

Telnet Command: vlan pri

This command is used to define the priority for each VLAN profile setting.

Syntax

vlan pri *n pri_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN ID number. n=VLAN ID number (from 0 to 7).
<i>pri_no</i>	It means the priority of VLAN profile. pri_no=0 ~7 (from none to highest priority).

Example

```
> vlan pri 1 2
VLAN1: Priority=2
```

Telnet Command: vlan restart

This command can make VLAN settings restarted with newest configuration.

Syntax

vlan restart

Example

```
> vlan restart ?
VLAN restarts!!!
```

Telnet Command: vlan status

This command display current status for VLAN.

Syntax

vlan status

Example

```
> vlan status
VLAN is Enable :
-----
VLAN Enable VID Pri p1 p2 p3 p4 s1 s2 s3 s4 subnet
-----
0 OFF 0 0 1:LAN1
1 OFF 0 2 1:LAN1
2 OFF 0 0 1:LAN1
3 OFF 0 0 V V V 1:LAN1
4 OFF 0 0 1:LAN1
5 OFF 0 0 1:LAN1
6 OFF 0 0 1:LAN1
7 OFF 0 0 1:LAN1
-----
Note: they are only untag for s1/s2/s3/s4, but they can join tag vlan with
lan
ports.
Permit untagged device in P1 to access router: ON.
```

Telnet Command: vlan subnet

This command is used to configure the LAN interface used by the VLAN group.

Syntax

vlan subnet group_id [1/2/3/4/5/6]

Syntax Description

Parameter	Description
[1/2/3/4/5/6]	It means interfaces, LAN1 ~ LAN4.

Example

```

> vlan subnet group_id 2
% Vlan Group-0 using LAN2      !

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: vlan submode

This command changes the VLAN encapsulation mechanisms in the LAN driver.

Syntax

`vlan submode [on/off/status]`

Syntax Description

Parameter	Description
<i>on</i>	It means to enable the promiscuous mode.
<i>off</i>	It means to enable the normal mode.
<i>status</i>	It means to display if submode is normal mode or promiscuous mode.

Example

```

> vlan submode status
% vlan subnet mode : normal mode
> vlan submode on
% vlan subnet mode modified to promiscuous mode.
> vlan submode status
% vlan subnet mode : promiscuous mode

```

Telnet Command: vlan tagged

This command is used to enable or disable the incoming of untagged packets.

Syntax

`vlan tagged [n] [on/off]`

`vlan tagged [unlimited] [on/off]`

`vlan tagged [p1_untag] [on/off]`

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>on/off</i>	It means to enable/disable the tagged VLAN.
<i>[unlimited] [on/off]</i>	unlimited on: It allows the incoming of untagged packets even all VLAN are tagged. unlimited off: It does not allows the incoming of untagged packets.
<i>[p1_untag] [on/off]</i>	P1_untag on: It allows the incoming of untagged packets form LAN port 1. P1_untag off: It does not allow the incoming of untagged packets from LAN port 1.

Example

```
> vlan tagged unlimited on
unlimited mode is ON
```

Telnet Command: vlan vid

This command is used to configure VID number for each VLAN channel.

Syntax

```
vlan vid n vid_no
```

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>vid_no</i>	It means the value of VLAN ID. Enter the value as the VLAN ID number. The range is form 0 to 4095.

Example

```
> vlan vid 1 4095
VLAN1, vid=4095
```

Telnet Command: vlan sysvid

This command is used to modify and show the scope (reserved 78) of the VLAN IDs used internally by the system.

Syntax

```
vlan sysvid [show | n]
```

Syntax Description

Parameter	Description
<i>show</i>	It means to show the scope of VLAN ID used internally.
<i>n</i>	It means the value to be set as VLAN ID. The range is from 0 to 4018.

Example

```
> vlan sysvid 100
You have set system VLAN ID to range: 100 ~ 177,
We recommend that you reboot the system now.

> vlan sysvid 200
You have set system VLAN ID to range: 200 ~ 263,
We recommend that you reboot the system now.

> vlan sysvid show
The system VLAN ID is in range: 200 ~ 263
```

Telnet Command: voip debug

This command can display debug message on the screen.

Syntax

```
voip debug [flush]
```

voip debug [showmsg]

Syntax Description

Parameter	Description
<i>flush</i>	It means to clear current log.
<i>showmsg</i>	It means to show current log.

Example

```
> voip debug showmsg
-->Send Message to 192.168.1.2:5060 <02:35:16>
INVITE sip:192.168.1.2 SIP/2.0

Telnet Command: voip dialplan

This command allows users to set phone book settings.

Syntax

voip dialplan block *n* [-<command><parameter>]

voip dialplan phonebook *n* [-<command><parameter>]

voip dialplan region [-<command><parameter>]

voip dialplan local [1/0]

Syntax Description

Parameter	Description
voip dialplan block	
<i>n</i>	It means the index number of the VoIP settings. n=1 - 20
-<command><parameter>	The available commands with parameters are listed below.
-m 0/1	It means to enable or disable the block mode. 0 - Disable 1 - Enable
-p <path>	Determines the block path. 1:in_url, 2:in_number 3:out_url,

	4:out_number 5:(in & out)_url, 6:(in & out)_number)
-n <number>	Determines the block number (maximum 29 characters).
-d <domain>	Block the specified domain.
-i <inf>	Block the specified interface(s) or All interfaces.
-s <Schedule>	Specify schedule profiles by indicating the index number of the schedule profile. Four schedule profiles can be used at one time.
-w	Delete the selected entry. N=null (clear all)
-v	List current settings.
voip dialplan phonebook	
n	It means the index number of the VoIP settings. n=1 ~ 60
-<command><parameter>	The available commands with parameters are listed below.
-d <number>	Specify the speed dial number.
-c <url>	Contact SIP URL I(max. 59 characters)
-n <name>	Contact name (max. 23 characters)
-a <enable>	Enable/disable the specify entry.
-m <mode>	Specify backup number mode. 0 - none 2 - PSTN
-b <number>	Specify the backup number.
-o <acc num>	Specify the dial out account. 0 - default 1 - acc1, 2 - acc2... ~ 12:=acc12
-z <enable>	Enable/disable ZRTP/SRTP VoIP security. 1 - enable 0 - disable
-l	Delete the specify entry.
-V	List current VoIP settings.
voip dialplan region	
-e	Enable or disable the regional function. 1 - enable 0 - disable
-m <number>	Return the last miss call.
-I <number>	Return the last incoming call.
-o <number>	Return the last outgoing call.
-F <number>	Hotkey to enable call forwarding (all) function.
-f <number>	Hotkey to enable call forwarding (busy) function.
-C <number>	Hotkey to enable call forwarding (no answer) function.
-c <number>	Hotkey to disable call forwarding function.
-W <number>	Hotkey to enable call waiting function.
-w <number>	Hotkey to disable call waiting function.
-H <number>	Hotkey to enable hide caller ID function.

<i>-h <number></i>	Hotkey to disable hide caller ID function.
<i>-D <number></i>	Hotkey to enable DND function.
<i>-d <number></i>	Hotkey to disable DND function.
<i>-A <number></i>	Hotkey to enable block anonymous calls function.
<i>-a <number></i>	Hotkey to disable block anonymous calls function.
<i>-U <number></i>	Hotkey to enable block unknow domain calls function.
<i>-u <number></i>	Hotkey to disable block unknow domain calls function.
<i>-P <number></i>	Hotkey to disable block IP calls function.
<i>-p <number></i>	Hotkey to disable block IP calls function.
<i>-l <number></i>	Hotkey to block last incoming call.
<i>-v</i>	List current status for Regional settings.
voip dialplan local	
<i>enable/disable</i>	Enable or disable the local calls. 1 - enable 0 - disable

Example

```

> voip dialplan phonebook 1 -d 1125
> voip dialplan region -l 8
> voip dialplan region -v
Your Setting for Regional
Regional Function is: Enable
Return the Last Miss Call: 20
Return the Last Incoming Call: *12
Return the Last Outgoing Call: 1
Hotkey to enable call forwarding (all) function: 0
Hotkey to enable call forwarding (busy) function: *90
Hotkey to enable call forwarding (no answer) function: *92
Hotkey to disable call forwarding function: 12
Hotkey to Enable Call Waiting Function: *56
Hotkey to Disable Call Waiting Function: *57
Hotkey to Enable Hide Caller ID Function: *67
Hotkey to Disable Hide Caller ID Function: *68
Hotkey to Enable DND Function: *78
Hotkey to Disable DND Function: *79
Hotkey to Enable Block Anonymous Calls Function: *77
Hotkey to Disable Block Anonymous Calls Function: *87
Hotkey to Enable Block Unknow Domain Calls Function: *40
Hotkey to Disable Block Unknow Domain Calls Function: *04
Hotkey to Enable Block IP Calls Function: *50
Hotkey to Disable Block IP Calls Function: *05
Hotkey to Disable Block The Last Incoming Call Function: 8

```

Telnet Command: voip dsp

Syntax

`voip dsp countrytone [channel] [value]`

`voip dsp dialtonepwr [channel] [AbsoluteValue]`

voip dsp EchoCanceller [type] [w_size] [nlp]
 voip dsp cidtype [channel] [value]
 voip dsp micgain [channel] [value/(1-10)]
 voip dsp spkgain [channel] [value/(1-10)]
 voip dsp jitterBuffer [port] [mode] [value]
 voip dsp dtmfDetset [nLevel] [nTwist]
 voip dsp dtmfTonepwr [Level]
 voip dsp cwtonepwr [ch] [value]
 voip dsp pstnringsfxs [1|2] [on/off]
 voip dsp relaydbounce [on/off]
 voip dsp setRingPat [ring_pattern_index] [patten_num]
 voip dsp setDtmfCidlevel -l [value]
 voip dsp setDtmfCidlevel -h [value]
 voip dsp setDtmfCidlevel -r 0
 voip dsp cidplusdigit [1/0] [channel] [value]

Syntax Description

Parameter	Description
voip dsp countrytone	
[channel] [value]	This command allows users to set the region for the tone settings. Different regions usually need different tone settings. Channel - 1 or 2. Value - displayed as follows: [2] UK, [3] USA, [4] Denmark, [5] Italy, [6] Germany, [7] Netherlands, [8] Portugal, [9] Sweden, [10] Australia, [11] Slovenia, [12] Czech, [13] Slovakia, [14] Hungary, [15] Switzerland , [16] France , [17] Malta
voip dsp dialtonepwr	
channel	This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting. Channel - Available channel number: 1 - 2
AbsoluteValue	AbsoluteValue - In -1 dB increments, with 1 corresponding to 6 dBm. Range - 1 to 30
voip dsp EchoCanceler	
type	This command is used to set the type of echo reduction. 0 - Disable the LEC processing. 1 - Cancel using the fixed window. 2 - Cancel using the fixed and moving window. 3 - Cancel using fixed window + Echo Suppressor.
w_size	The Line Echo Canceller (LEC) window size is 4, 6, 8 or 16 (ms).
nlp	Nlp - Non-linear processing (NLP) for more smooth transitions. 1 - disable 0 - enable
voip dsp cidtype	

<i>channel</i>	Set the caller ID type for FXS 1 (Channel 1) or FXS 2 (Channel 2). 1 - FXS 1 2 - FXS 2
<i>value</i>	Each number (1 to 6) represents different type. 1 - FSK_ETSI 2 - FSK_ETSI(UK) 3 - FSK_BELLCORE(US/AU) 4 - DTMF 5 - DTMF(DK) 6 - DTMF(SE,NL,FIN) For example : Vigor> voip dsp cidtype 2 6 channel=2, current cidType: 6 That means the caller ID type for FXS2 (Channel2) is DTMF (SE, NL, FIN).
<i>voip dsp micgain</i>	
<i>channel</i>	Adjust the volume of microphone by entering number from 1- 10 for FXS 1 or FXS 2. 1 - FXS 1 2 - FXS 2
<i>value/(1-10)</i>	The larger the number is, the louder the volume will be.
<i>voip dsp spkgain</i>	
<i>channel</i>	Adjust the volume of speaker by entering number from 1- 10 for FXS 1 or FXS 2. 1 - FXS 1 2 - FXS 2
<i>value/(1-10)</i>	The larger the number is, the louder the volume will be.
<i>voip dsp jb</i>	
<i>port</i>	Set the size of jitter buffer. Available settings are 0 (FXS1) and 1 (FXS2).
<i>mode</i>	Available settings are Fixed and Adaptive (default setting).
<i>value</i>	Available settings are 1 ~ 180 (unit: msec). e.g., Vigor> voip dsp jb 1 FIXED 100
<i>voip dsp timer</i>	
<i>[Timer]</i>	Set the waiting time for dialing out. It means to set the timer settings. The unit is mini-second. The range is from 1 to 255. Value "1" is corresponding to 500ms. That is to say, Value "6" is corresponding 3000ms (i.e., 3 seconds) Timer: 1 ~ 20. Vigor> voip dsp timer 20 Set the timer:20
<i>Voip dsp debugMsg</i>	
<i>?</i>	Availbe settings include: clrev - clear phone hook status. getev - get phone hook status. clrfskcid - clear fsk data for caller-ID from PSTN line. getfskcid - get fsk data for caller-ID from PSTN line. clrdtmfcid - clear dtmf data for caller-ID from PSTN line.

	<p>getdtmfcid - get dtmf data for caller-ID from PSTN line. voicebuf - get message for available voice buffer pool. clrint - clear status for interrupt. getint - get status for interrupt. Vigor> voip dsp debugMsg getint the interrupt status for ad0 = 21 the interrupt status for ad1 = 0 the interrupt status for vc = 0</p>
voip dsp dtmfDetset	
<i>nLevel</i>	Set minimal signal level in dB, for DTMF detection. Range - (-96 ~ -1)
<i>nTwist</i>	Maximum allowed signal twist in dB, for DTMF detection. Range - (0 ~ 12)
voip dsp dtmfTonePwr	
<i>Level</i>	Set power level for DTMF frequency. Level - 0 ~ 100. Power level for dtmf frequency in 0.3 dB steps. 0 map to 0dB 1 map to -0.3dB 100 map to -30dB
voip dsp cwtonePwr	
<i>ch</i>	Set the call waiting tone power level. 1 - FXS 1 2 - FXS 2.
<i>value</i>	1 ~ 30, in -1 dB increments, with 1 corresponding to 8 dBm.
voip dsp pstnringfxs	
<i>1/2</i>	Enable or disable PSTN ring on FXS 1/FXS 2. 1 means FXS1; 2 means FXS2.
<i>on/off</i>	On means enable; off means disable.
voip dsp relaybounce	
<i>on/off</i>	on: Enable relay filter noise. But it maybe ignore the caller-id!!! off: Disable relay filter noise. But the noise will cause the relay to switch to PSTN!!!
voip dsp setRingPat	
<i>ring_pattern_index</i>	This command can change the ring pattern at Index(2)-Index(6). ring_pattern_index - Index (1) was locked for your country.
<i>patten_num</i>	It's the ring pattern number (1-12) for a country. ----- <i>patten_num=1 Australia Ring Pattern:</i> <i>cadenceOneOn=400, cadenceOneOff=200</i> <i>cadenceTwoOn=400, cadenceTwoOff=2000</i> <i>patten_num=2 Denmark Ring Pattern:</i> <i>cadenceOneOn=1000, cadenceOneOff=4000</i>
voip dsp setFaxECmode -s	
<i>ch</i>	Set the FAX error correction mode. ch : range (0 ~ 1)
<i>mode</i>	mode : EC(error correction) ch(x) mode(0) : REDUNDANCY EC(error correction) ch(x) mode(1) : FEC

voip dsp setDtmfCidlevel -l / voip dsp setDtmfCidlevel -h [value]

voip dsp setDtmfCidlevel -r 0

value

"setDtmfCidLevel" is used to configure the signal strength for transferring to FXS DTMF caller ID.

value - 0 ~ 64

voip dsp setDtmfCidLevel -l [value]

voip dsp setDtmfCidLevel -h [value]

voip dsp setDtmfCidLevel -r 0/1

r - reset low/high DTNF level to default setting. 0 means Disable; 1 means Enable.

Note: This function is supported only by special mode.

voip dsp setfxoCY

value

It is used to apply FXO country settings.

0: "use system country"

1: "Taiwan"

2: "Germany"

3: "Sweden"

4: "France"

5: "Switzerland"

6: "Holland"

7: "Finland"

8: "Denmark"

9: "UK"

10: "Australia"

12: "Italy"

14: "Red_China"

15: "Singapore"

17: "Spain"

18: "Portugal"

20: "Poland"

21: "Czech"

22: "Hungary"

23: "Slovenia"

25: "Slovakia"

37: "Brasil"

61: "US"

voip dsp setfxoringl

value

It is used to configure detection ring voltage threshold to apply to FXO.

Available setting include:

0 : use driver default value

1 : Minimum voltage threshold: 25V

2 : Minimum voltage threshold: 35V

3 : Minimum voltage threshold: 45V

Note: This function is supported only by special mode.

voip dsp setfxoCid

value

Set FXO detect caller ID type.

It is available only for the model with FXO port.

voip dsp cidplusdigit

[1/0] [channel] [value]

Set the substitution (0-9) for '+' digit in caller ID.

1 - enable the substitution.

0 - disable the substitution.

channel - 0 (FXS 1) -1 (FXS 2)

value - 0 - 9

voip dsp setRingThres

<i>port</i>	Set the threshold for ring signal. Port setting is "0" only.
<i>value</i>	Available settings 0-250. Unit is ms. The time is an approximate value.
voip dsp setCidDetGain	
<i>tx/rx gain</i>	Set the gain value of caller ID detected. Tx gain - Available settings -24 ~ 12. Default is 0. Rx gain - Available settings -24 ~ 12. Default is -6.

Example

```

> voip dsp countrytone ?
VoIP has been disable. Please enable VoIP first.
> voip sip misc -D 0
System reboot now!
> voip dsp countrytone ?
> Vigor> voip dsp countrytone?
usage:
  voip dsp countrytone [channel][value]
  [channel]: 1-2
  [value]: ( [2] UK, [3] USA, [4] Denmark, [5] Italy, [6] Germany, [7] Netherlands, [8] Portugal, [9] Sweden, [10] Australia, [11] Slovenia, [12] Czech, [13] Slovakia, [14] Hungary, [15] Switzerland , [16] France , [17] Malta)
===== Channel=1 =====
  current country tone: user defined

----- ( Dial tone ) -----
  Feq1=425, Feq2=0, OneOn=0, Off=0, TwoOn=0, TwoOff=0
----- ( Ringing tone ) -----
  Feq1=425, Feq2=0, OneOn=1500, OneOff=3000, TwoOn=0, TwoOff=0
----- ( Busy tone ) -----
  Feq1=425, Feq2=0, OneOn=200, OneOff=200, TwoOn=0, TwoOff=0

===== Channel=2 =====
  current country tone: user defined
> voip dsp dialtonepwr 1 20
Current power level of dialtone:20 (-13 db), channel=1
> voip dsp setCidDetGain tx 1
  Current CID Detect Tx Gain [1], Rx Gain [-6]
> voip dsp setCidDetGain rx 3
  Current CID Detect Tx Gain [1], Rx Gain [3]

```

Telnet Command: voip rtp

Syntax

voip rtp codec [*sip acc index*][*type/size/vad/one*][*value*]

voip rtp dtmf [*index*] [*mode/payloadtype*][*value*]

voip rtp port [*start/end*] [*value*]

voip rtp symmetric [*value*]

voip rtp tos ?

Syntax Description

Parameter	Description
<i>voip rtp codec</i>	
<i>[sip acc index][type/size/vad/one][value]</i>	<p>Set the voice coding.</p> <p>sip acc index -SIP account index number. Available number, 1 ~ 12.</p> <p>type - Available settings include</p> <ul style="list-style-type: none"> 0. G.711MU 1. G.711A 2. G.729A/B 3. G.723 4. G.726_32 <p>size - Five options,</p> <ul style="list-style-type: none"> 0 means 10ms 1 means 20ms 2 means 30ms 3 means 40ms 5 means 60ms <p>Vad - 0 means to Disable the function of Voice Active Detector (vad); 1 means to Enable the function of Voice Active Detector (vad).</p> <p>One - 0 means to Disable the function of single codec; 1 means to Enable the function of single codec.</p>
<i>voip rtp dtmf</i>	
<i>[index] [mode / payloadtype][value]</i>	<p>Set the DTMF mode and Payload type for DTMF.</p> <p>Index - SIP account index number. Available number, 1 ~ 12.</p> <p>Mode - Four options to be selected.</p> <ul style="list-style-type: none"> 0. Inband 1. Outband 2. SIP INFO (cisco) 3. SIP INFO (nortel) <p>Payloadtype - Available settings 96~127.</p> <p>Value - Type 0~3 or 96~127 based on the mode specified.</p> <p>For example,</p> <pre>> voip rtp dtmf 1 mode 1</pre>
<i>voip rtp port</i>	
<i>start end</i>	Specifies the start/end port for RTP stream.
<i>value</i>	The default value is 10050/15000.
<i>voip rtp symmetric</i>	
<i>value</i>	<p>Make the data transmission going through on both ends of local router and remote router not misleading due to IP lost.</p> <ul style="list-style-type: none"> 1 - Enable 0 - Disable
<i>voip rtp tos</i>	
<i>value</i>	<p>Set the type of service (TOS) setting for RTP packets.</p> <p>For example,</p> <pre>> voip rtp tos 0x899</pre> <p>Set TOS: 0x899</p>

Example

```

> voip rtp codec 1 type 3
> voip rtp dtmf 2 mode 3
> voip rtp port start 10070 end 14400
Set start port: 10070
> voip rtp port end 14400
Set end port: 14400
> voip rtp symmetric 1
Set symmetric rtp to Enable

```

Telnet Command: voip sip

This command allows users to set SIP account.

Syntax

`voip sip acc n [-<command> <parameter> | ...]`

`voip sip calllog`

`voip sip ep n [-<command> <parameter> | ...]`

`voip sip misc[-<command> <parameter> | ...]`

`voip sip nat [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>voip sip acc</i> - Allows users to set SIP account.	
<i>n</i>	n = 1 to 12 It means the index number of the VoIP settings.
<i>-P [profile]</i>	It means the name of the account profile (maximum 11 characters).
<i>-r [reg mode]</i>	Set registration mode for SIP account. 0 - none 1 - auto 2 - wan1 only 3 - wan2 only 4 - lan/vpn 5 - PVC 6 - wan3 only 7 - wan4 only 8 - wan1 first 9 - wan2 first 10 - wan3 first 11 - wan4 first
<i>-o [port]</i>	Set the port number for sending/receiving SIP message for building a session. The default value is 5060.
<i>-d [domain]</i>	Set the domain name or IP address of the SIP Registrar server. The maximum is 63 characters.
<i>-y [proxy]</i>	Set domain name or IP address of SIP proxy server. The maximum is 63 characters.
<i>-b [enable]</i>	Enable / disable outbound proxy by SIP account. 0 - disable 1 - enable
<i>-s [enable]</i>	Enable / disable to locate SIP server (rfc 3263). 0 - disable 1 - enable

<i>-N [name]</i>	Set SIP account display name. Name - max. 23 characters.
<i>-n [number]</i>	Set SIP account number. Number - max. 63 characters.
<i>-a [id]</i>	Set SIP authentication ID. Id - max. 63 characters.
<i>-A [enable]</i>	Enable /disable to use SIP authentication ID. 0 - disable 1 - enable
<i>-p [passwd]</i>	Set SIP account password (max. 63 characters).
<i>-e [sec]</i>	Set expiry time (default 3600) for SIP account.
<i>-w [enable]</i>	Enable to make phone call without registering.
<i>-m [mode]</i>	Set NAT traversal mode. 0 - disable 1 - stun 2 - manual 3 - nortel
<i>-F [mode]</i>	Set call forwarding mode. 0 - disable 1 - always 2 - busy 3 - no answer 4 - busy or no answer
<i>-u [url]</i>	Set SIP URL for call forwarding (max. 63 characters).
<i>-t [sec]</i>	Set call forwarding timer. For example, voip sip acc 1 -t 30
<i>-g [port]</i>	Set the ring port for incoming call. For example, Port - r1 means FXS1; r2 means FXS2.
<i>-z [pattern]</i>	Set account ring pattern (1 ~ 6).
<i>-i [enable]</i>	Remove all bindings while they are un-registered. 0 means Disable; and 1 means Enable.
<i>-B <enable></i>	Enable / disable the function of Broadsoft Call Control. 0 - disable 1 - enable
<i>-S [idx]</i>	Enable and use alias IP to register. idx - 1 to 31. If 0 is used, such function will be disabled.
<i>-k [num1 num2...]</i>	Set backup wan list (first wan, second wan...) range: 1 to 4.
<i>-v</i>	View current status for account settings.
Voip sip calllog	Display current status for SIP call log.
voip sip ep	
<i>n</i>	The index number of the VoIP settings. n - 1, 2.
<i>-o [acc]</i>	Available dial out account (1 ~ 12).
<i>-L [url]</i>	Set SIP URL (max. 63 characters) for hot line.
<i>-I [enable]</i>	Enable / disable the function of hot line.

	0 - disable 1 - enable
<i>-W [enable]</i>	Enable / disable the function of warm line. 0 - disable 1 - enable
<i>-w [enable]</i>	Enable / disable the function of call waiting enable. 0 - disable 1 - enable
<i>-E [enable]</i>	Enable / disable the function of call waiting enable but only remind one time. 0 - disable 1 - enable
<i>-x <enable></i>	Enable / disable the function of call transfer. 0 - disable 1 - enable
<i>-d [enable]</i>	Enable / disable the function of DND (Do Not Disturb) 0 - disable 1 - enable
<i>-s [id]</i>	Indicate DND schedule. Id - s1, s2, s3, s4 (max. 4 schedule)
<i>-h [enable]</i>	Enable / disable the function of calling line identification restriction (CLIR). 0 - disable 1 - enable
<i>-u [mode]</i>	Set CLIR mode. 0 - means "draft-ietf-sip-privacy" 1 - means "rfc 3323/3325"
<i>-z [enable]</i>	Enable / disable playing dial tone when registered on sip server. 0 - disable 1 - enable
<i>-n [enable]</i>	Enable / disable session timer. 0 - disable 1 - enable
<i>-m [sec]</i>	Set the value for session timer (unit: sec).
<i>-R [min,max]</i>	Set the flash hook time range 100-2000 (unit: ms).
<i>-8 [enable]</i>	Enable or disable T.38 fax relay feature. 0 - disable 1 - enable
<i>-v</i>	View current settings.
voip sip misc - Allows users to set miscellaneous settings for the device.	
<i>-c [enable]</i>	Enable compact header to shorten the packet (0: disable, 1: enable).
<i>-s [enable]</i>	Change "#" into digit number. 0 - disable 1 - enable
<i>-e [enable]</i>	Enable Europe style flash hook operation mode. 0 - disable 1 - enable

<i>-h [enable]</i>	Enable/disable call hold mode based on protocol RFC2543 (0: disable, 1:enable).
<i>-i [enable]</i>	Enable CODEC change without Re-INVITE. 0 - disable 1 - enable
<i>-p [enable]</i>	Enable PRACK message. 0 - Not support PRACK. 1 - Support PRACK.
<i>-P [enable]</i>	Enable IP Call. 0 - Disable IP call. 1 - Enable IP call.
<i>-H [enable]</i>	SIP INFO packet will be sent out when encountering hook flash event. 0 - disable 1 - enable
<i>-t [val]</i>	Set the mode of User-Agent (e.g., phone, software, and device) for SIP packet. 0 - Hide SIP header "User-Agent". 1 - Show SIP header "User-Agent". 2 - Use default "User-Agent" value. 3 - Use user-defined "User-Agent" value.
<i>-u UAValue</i>	For every SIP user agent identifies itself with a string, this command allows you to set the value (e.g, IP address, phone number, e-mail address) of User-Agent. The length of the string must be less than 64 characters.
<i>-D [disable]</i>	Disable VoIP Service. 1 - disable VoIP service. 0 - enable VoIP service. System will automatic reboot to activate voip service
<i>-v</i>	View current status for miscellaneous settings.
<i>voip sip nat</i> - Allows users to set NAT Traversal Setting.	
<i>-s [server]</i>	Set the IP address for STUN server.
<i>-t [sec]</i>	Set ping interval for SIP account. Sec - 6 - 600
<i>-i [ip]</i>	Indicate external IP address.
<i>-v</i>	View current settings for SIP NAT.

Example

```

> voip sip misc -t 1
includes User-Agent header

> voip sip misc -u 91704688carrie
user-defined User-Agent:91704688carrie
> voip sip acc 1 -P carrie_1 -r 1 -d 172.16.3.133
> voip sip acc 1 -t 30
> voip sip misc -h 1
> voip sip acc 1 -v
index      : 1
profile    : carrie_1
reg mode   : 1 | reg. [No]
alias_ip_idx : 0

```

```

backup list      :
domain          : 172.16.3.133
proxy           : | outbound [No] | DNS-SRV [No]
noreg call      : No
disp. Name      :
acc number      : ---
auth. ID        : | [disable]
expiry          : 3600

call fwd timer  : 30
Broadsoft       : disable
Italian ITSP modification: disable

```

Telnet Command: voip secure

This command allows users to enable or disable secure phone feature, and SAS voice prompt.

Syntax

`voip secure general [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<code>voip secure general -e</code>	Enable / disable secure phone feature. 0 - disable 1 - enable
<code>voip secure general -p</code>	Enable /disable SAS voice prompt. 0 - disable 1 - enable
<code>voip secure general -v</code>	view only secure phone general settings

Example

```

> voip secure general -v
secure phone feature is disabled
SAS voice prompt is enabled
> voip secure general -p 0
SAS voice prompt is disabled

```

Telnet Command: vpn l2lset

This command allows users to set advanced parameters for LAN to LAN function.

Syntax

```

vpn l2lset [list index] peerid [peerid]
vpn l2lset [list index] localid [localid]
vpn l2lset [list index]main [auto/proposal index]
vpn l2lset [list index] aggressive [g1/g2]

```

vpn l2lset [*list index*]pfs [*on/off*]
 vpn l2lset [*list index*] phase1[*lifetime*]
 vpn l2lset [*list index*] phase2[*lifetime*]

Syntax Description

Parameter	Description
<i>list index</i>	It means the index number of L2L (LAN to LAN) profile.
<i>peerid</i>	It means the peer identity for aggressive mode.
<i>localid</i>	It means the local identity for aggressive mode.
<i>main</i>	It means to choose proposal for main mode.
<i>auto index</i>	It means to choose default proposals.
<i>proposal index</i>	It means to choose specified proposal.
<i>aggressive</i>	It means the chosen DH group for aggressive mode
<i>pfs</i>	It means "perfect forward secrete".
<i>on/off</i>	It means to turn on or off the PFS function.
<i>phase1</i>	It means phase 1 of IKE.
<i>lifetime</i>	It means the lifetime value (in second) for phase 1 and phase 2.
<i>phase2</i>	It means phase 2 of IKE.

Example

```
> VPN l2lset 1 peerid 10226
```

Telnet Command: vpn dinset

This command allows users to configure setting for remote dial-in VPN profile.

Syntax

vpn dinset <*list index*>
 vpn dinset <*list index*> <*on/off*>
 vpn dinset <*list index*> motp <*on/off*>
 vpn dinset <*list index*> pin_secret <*pin*> <*secret*>

Syntax Description

Parameter	Description
< <i>list index</i> >	It means the index number of the profile.
< <i>on/off</i> >	It means to enable or disable the profile. on - Enable. off - Disable.
<i>motp</i> < <i>on/off</i> >	It means to enable or disable the authentication with mOTP function. on - Enable. off - Disable.
<i>pin_secret</i> < <i>pin</i> > < <i>secret</i> >	It means to set PIN code with secret. < <i>pin</i> > - Enter the code for authentication (e.g, 1234). < <i>secret</i> > - Use the 32 digit-secret number generated by mOTP in the

mobile phone (e.g., e759bb6f0e94c7ab4fe6)

Example

```
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Deactive

Mobile OTP: Disabled

Password:

Idle Timeout: 300 sec

> vpn dinset 1 on
% set profile active

> vpn dinset 1 motp on
% Enable Mobile OTP mode!>
> vpn dinset 1 pin_secret 1234 e759bb6f0e94c7ab4fe6
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Active

Mobile OTP: Enabled

PIN: 1234

Secret: e759bb6f0e94c7ab4fe6

Idle Timeout: 300 sec
```

Telnet Command: vpn subnet

This command allows users to specify a subnet selection for the specified remote dial-in VPN profile.

Syntax

vpn subnet [*index*] [1/2/3/4/5/6]

Syntax Description

Parameter	Description
< <i>index</i> >	It means the index number of the VPN profile.
<1/2/3/4/5/6>	1 - it means LAN1 2 - it means LAN2. 3 - it means LAN3 4 - it means LAN4.

5 - it means LAN5.
6 - it means LAN6.

Example

```
> vpn subnet 1 2
>
```

Telnet Command: vpn setup

This command allows users to setup VPN for different types.

Syntax

Command of PPTP Dial-Out

```
vpn setup <index> <name> pptp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of IPsec Dial-Out

```
vpn setup <index> <name> ipsec_out <ip> <key> <nip> <nmask>
```

Command of L2Tp Dial-Out

```
vpn setup <index> <name> l2tp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of Dial-In

```
vpn setup <index> <name> dialin <ip> <usr> <pwd> <key> <nip> <nmask>
```

Syntax Description

Parameter	Description
For PPTP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the PPTP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 pptp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For IPsec Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 ipsec_out 1.2.3.4 1234 192.168.1.0 255.255.255.0
For L2TP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.

<code><usr> <pwd></code>	It means the user and the password required for the L2TP connection.
<code><nip> <nmask></code>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 l2tp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For Dial-In	
<code><index></code>	It means the index number of the profile.
<code><name></code>	It means the name of the profile.
<code><ip></code>	It means the IP address allowed to dial in.
<code><usr> <pwd></code>	It means the user and the password required for the PPTP/L2TP connection.
<code><key></code>	It means the value of IPsec Pre-Shared Key.
<code><nip> <nmask></code>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0

Example

```
> vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0
% Profile Change Log ...

% Profile Index : 1
% Profile Name : name1
% Username : vigor
% Password : 1234
% Pre-share Key : abc
% Call Direction : Dial-In
% Type of Server : ISDN PPTP IPsec L2TP
% Dial from : 1.2.3.4
% Remote Network IP : 192.168.1.0
% Remote Network Mask : 255.255.255.0
>
```

Telnet Command: vpn option

This command allows users to configure settings for LAN to LAN profile.

Syntax

```
vpn option <index> <cmd1>=<param1> [<cmd2>=<para2> | ... ]
```

Syntax Description

Parameter	Description
<code><index></code>	It means the index number of the profile. Available index numbers: 1 ~ 32
For Common Settings	
<code><index></code>	It means the index number of the profile.
<code>pname</code>	It means the name of the profile.

<i>ena</i>	It means to enable or disable the profile. on - Enable off - Disable
<i>thr</i>	It means the way that VPN connection passes through. Available settings are w1f, w1o, w2f, and w2o. w1f - WAN1 First. w1o - WAN1 Only. w2f - WAN2 First. w2o - WAN2 Only.
<i>nnpkt</i>	It means the NetBios Naming Packet. on - Enable the function to pass the packet. off - Disable the function to block the packet.
<i>dir</i>	It means the call direction. Available settings are b, o and i. b - Both o - Dial-Out i - Dial-In.
<i>idle=[value]</i>	It means Always on and Idle Time out. Available values include: -1 - it means always on for dial-out. 0 - it means always on for dial-in. Other numbers (e.g. , idle=200, idle=300, idle=500) mean the router will be idle after the interval (seconds) configured here.
<i>palive</i>	It means to enable PING to keep alive. -1 - disable the function. 1,2,3,4 - Enable the function and PING IP 1.2.3.4 to keep alive.
For Dial-Out Settings	
<i>ctype</i>	It means "Type of Server I am calling". "ctype=t" means PPTP. "ctype=s" means IPSec. "ctype= l" means L2TP(IPSec Policy None). "ctype= l1" means L2TP(IPSec Policy Nice to Have). "ctype= l2" means L2TP(IPSec Policy Must).
<i>dialto</i>	It means Server IP/Host Name for VPN. (such as draytek.com or 123.45.67.89).
<i>ltype</i>	It means Link Type. "ltype=0" means "Disable". "ltype=1" means "64kbps". "ltype=2" means "128kbps". "ltype=3" means "BOD".
<i>oname</i>	It means Dial-Out Username. "oname=admin" means to set Username = admin.
<i>opwd</i>	It means Dial-Out Password "opwd=1234" means to set Password = 1234.
<i>pauth</i>	It means PPP Authentication. "pauth=pc" means to set PPP Authentication = PAP&CHAP. "pauth=p" means to set PPP Authentication = PAP Only
<i>ovj</i>	It means VJ Compression. "ovj=on/off" means to enable/disable VJ Compression.
<i>okey</i>	It means IKE Pre-Shared Key.

	"okey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>ometh</i>	It means IPsec Security Method. "ometh=ah/" means AH. "ometh=espd/espda/" means ESP DES without/with Authentication. "ometh=esp3/esp3a/" means ESP 3DES without/with Authentication. "ometh=espa/espaa" means ESP AES without/with Authentication.
<i>sch</i>	It means Index(1-15) in Schedule Setup. sch=1,3,5,7 Set schedule 1->3->5->7
<i>rca1lb</i>	It means Require Remote to Callback. "rca1lb=on/off" means to enable/disable Set Require Remote to Callback.
<i>ikeid</i>	It means IKE Local ID. "ikeid=vigor" means Set Local ID = vigor.
For Dial-In Settings	
<i>itype</i>	It means Allowed Dial-In Type. Available settings include: "itype=t" means PPTP. "itype=s" means IPsec. "itype=L1" means L2TP (None). "itype=L1" means L2TP(Nice to Have). "itype=l2" means L2TP(Must).
<i>peer</i>	It means specify Peer VPN Server IP for Remote VPN Gateway. Type "203.12.23.48" means to allow VPN dial-in with IP address of 203.12.23.48. Type "off" means any remote IP is allowed to dial in.
<i>peerid</i>	It means the peer ID for Remote VPN Gateway. Type "draytek" means the word is used as local ID.
<i>iname</i>	It means Dial-in Username. "iname=admin" means to set username as "admin".
<i>ipwd</i>	It means Dial-in Password. "ipwd=1234" means to set password as "1234".
<i>ivj</i>	It means VJ Compression. "ivj=on/off" means to enable /disable VJ Compression.
<i>ikey</i>	It means IKE Pre-Shared Key. "ikey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>imeth</i>	It means IPsec Security Method "imeth=h" means "Allow AH". "imeth=d" means "Allow DES". "imeth=3" means "Allow 3DES". "imeth=a" means "Allow AES".
For TCP/IP Settings	
<i>mywip</i>	It means My WAN IP. "mywip=1.2.3.4" means to set My WAN IP as "1.2.3.4".
<i>rgip</i>	It means Remote Gateway IP. "rgip=1.2.3.4" means to set Remote Gateway IP as "1.2.3.4".
<i>rnip</i>	It means Remote Network IP. "rnip=1.2.3.0" means to set Remote Network IP as "1.2.3.0".
<i>rnmask</i>	It means Remote Network Mask.

	"rnmask=255.255.255.0" means to set Remote Network Mask as "255.255.255.0".
<i>rip</i>	It means RIP Direction. "rip=d" means to set RIP Direction as "Disable". "rip=t" means to set RIP Direction as "TX". "rip=r" means to set RIP Direction as "RX". "rip=b" means to set RIP Direction as "Both".
<i>mode</i>	It means the option of "From first subnet to remote network, you have to do". "mode=r" means to set Route mode. "mode=n" means to set NAT mode.
<i>droute</i>	It means to Change default route to this VPN tunnel (Only single WAN supports this). droute=on/off means to enable/disable the function.

Example

```
> vpn option 1 idle=250
% Change Log..

% Idle Timeout = 250
```

Telnet Command: vpn mroute

This command allows users to list, add or delete static routes for a certain LAN to LAN VPN profile.

Syntax

vpn mroute <index> list

vpn mroute <index> add <network ip>/<mask>

vpn mroute <index> del <network ip>/<mask>

Syntax Description

Parameter	Description
<i>list</i>	It means to display all of the route settings.
<i>add</i>	It means to add a new route.
<i>del</i>	It means to delete specified route.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32
<network ip>/<mask>	Enter the IP address with the network mask address.

Example

```
> vpn mroute 1 add 192.168.5.0/24
% 192.168.5.0/24
% Add new route 192.168.5.0/24 to profile 1
```

Telnet Command: vpn list

This command allows users to view LAN to LAN VPN profiles.

Syntax

```
vpn list <index> all
vpn list <index>com
vpn list <index>out
vpn list <index> in
vpn list <index>net
```

Syntax Description

Parameter	Description
<i>all</i>	It means to list configuration of the specified profile.
<i>com</i>	It means to list common settings of the specified profile.
<i>out</i>	It means to list dial-out settings of the specified profile.
<i>in</i>	It means to list dial-in settings of the specified profile.
<i>net</i>	It means to list Network Settings of the specified profile.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32

Example

```
> vpn list 32 all
% Common Settings

% Profile Name           : ???
% Profile Status        : Disable
% Netbios Naming Packet : Pass
% Call Direction        : Both
% Idle Timeout          : 300
% PING to keep alive    : off

% Dial-out Settings

% Type of Server        : PPTP
% Link Type:            : 64k bps
% Username              : ???
% Password              :
% PPP Authentication    : PAP/CHAP
% VJ Compression        : on
% Pre-Shared Key        :
% IPSec Security Method : AH
% Schedule              : 0,0,0,0
% Remote Callback       : off
% Provide ISDN Number   : off
% IKE phase 1 mode      : Main mode
% IKE Local ID          :

% Dial-In Settings

>

```

Telnet Command: vpn remote

This command allows users to enable or disable *PPTP/IPSec/L2TP* VPN service.

Syntax

vpn remote [*PPTP/IPSec/L2TP*] [*on/off*]

Syntax Description

Parameter	Description
<i>PPTP/IPSec/L2TP</i>	There are four types to be selected.
<i>on/off</i>	on - enable VPN remote setting. off - disable VPN remote setting.

Example

```

> vpn remote PPTP on
Set PPTP VPN Service : On

Please restart the router!!

```

Telnet Command: vpn 2ndsubnet

This command allows users to enable second subnet IP as VPN server IP.

Syntax

vpn 2ndsubnet *on*

vpn 2ndsubnet *off*

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable second subnet.

Example

```

> vpn 2ndsubnet on
%Enable second subnet IP as VPN server IP!

```

Telnet Command: vpn trunk

This command allows users to configure VPN Backup, VPN load balance, GRE over IPsec, and Binding tunnel policy.

```

vpn trunk show_usable
vpn trunk backup <add/del> <name> <Member#1> <Member#2>
vpn trunk backup more_syslog <ON/OFF>
vpn trunk backup ERD <name> <Normal/Recover/Resume><second>
vpn trunk lb <add/del> <name> <Member#1> <Member#2>
vpn trunk lb more_syslog <ON/OFF>
vpn trunk lb algorithm <name> <RR>
vpn trunk lb algorithm <name><W-RR><Auto> <AccordingRatio> <Member1:Member2>
vpn trunk lb algorithm <name><Fastest>
vpn trunk bind usage <BindIndex>
vpn trunk bind show <LoadBalanceName>
vpn trunk bind reset_default
vpn trunk bind more_syslog <ON/OFF>
vpn trunk bind set <BindIndex> <ACT> <TrunkName> <Member> <SrcIp:A-B> <DstIp:A-B>
<DstPort:A-B> <Proto> <Frag>
vpn trunk bind insert <After_BindIndex> <ACT> <TrunkName> <Member> <SrcIp:A-B>
<DstIp:A-B> <DstPort:A-B> <Proto> <Frag>
vpn trunk SetGre show <Dialout_Index>
vpn trunk SetGre
<Active/In-active><Dialout_Index><GRE_MyIP><GRE_PeerIP><Logical_Traffic>
vpn trunk An_Gre GreIPsecAnalyze <ON/OFF>

```

Syntax Description

Parameter	Description
<i>show_usable</i>	Display a list of LAN to LAN dial out profiles.
<i>backup <add/del> <name> <Member#1> <Member#2></i>	Set multiple VPN tunnels (LAN to LAN profiles) as backup tunnel. add/del - Add or delete a profile for used in VPN Trunk. name - Specify the name of the VPN trunk. Member#1 - Indicate the first LAN to LAN profile. Member#2 - Indicate the second LAN to LAN profile.
<i>backup more_syslog <ON/OFF> lb more_syslog <ON/OFF> bind more_syslog <ON/OFF></i>	These commands are used for RD debug.
<i>backup ERD <name> <Normal/Recover/Resume>< second></i>	ERD means Environment Recovers Detection. name - Specify the name of the VPN trunk. Normal - Indicate the Normal mode. All dial-out VPN TRUNK backup profiles will be activated alternatively. Recover - Indicate the duration of VPN backup operation. Resume - When VPN connection breaks down or disconnects, Member 1 will be the top priority for the system to do VPN connection. Second - "0" means to dial each six seconds automatically. "60 ~ 2147483647" means to early handle for less than 30 seconds within designated time.
<i>lb <add/del> <name> <Member#1> <Member#2></i>	It means to create VPN trunk with load balance. add/del - Add or delete a profile for used in VPN Trunk.

	<p>name - Specify the name of the VPN trunk.</p> <p>Member#1 - Indicate the first LAN to LAN profile.</p> <p>Member#2 - Indicate the second LAN to LAN profile.</p>
<p><i>lb algorithm</i> <name> <RR/W-RR/Fastest></p>	<p>Set multiple VPN tunnels for using as traffic load balance tunnel. Such command is to configure the algorithm (with round robin mode) of Load Balance.</p> <p>name - Specify the name of the VPN trunk.</p> <p>RR - It means round robin mode. All of the dial-out profiles will be taken turns equally.</p>
<p><i>lb algorithm</i> <name><W-RR><Auto> <AccordingRatio> <Member1:Member2></p>	<p>Such command is to configure the algorithm (with round robin mode) of Load Balance.</p> <p>name - Specify the name of the VPN trunk.</p> <p>W-RR - It means weighted round robin mod based on speed ratio.</p> <ul style="list-style-type: none"> ● <i>Auto</i> - the speed must be based on Lay2. ● <i>AccordingRatio</i> - the speed must be based on given ratio. <p>Member#1 - Indicate the first LAN to LAN profile.</p> <p>Member#2 - Indicate the second LAN to LAN profile.</p>
<p><i>lb algorithm</i> <name><Fastest></p>	<p>Such command is to configure the algorithm (with fastest mode) of Load Balance. Most of traffics will be led to the channel with the fastest connection.</p> <p>name - Specify the name of the VPN trunk.</p>
<p><i>bind usage</i> <BindIndex></p>	<p>Display detailed information for VPN Load Balance Tunnel Bind.</p> <p>BindIndex - Indicate the index number of the tunnle bind.</p>
<p><i>bind show</i> <LoadBalanceName></p>	<p>Display the bind information for VPN Load Balance profile.</p> <p>LoadBalanceName - Enter the name of VPN Load Balance profile</p>
<p><i>bind reset_default</i></p>	<p>Reset the bind tunnel for VPN load balance to factory reset settings.</p>
<p><i>bind set</i> <BindIndex> <ACT> <TrunkName> <Member> <SrcIp:A-B> <DstI p:A-B> <DstPort:A-B> <Proto> <Frag></p>	<p>Set the binding tunnel policy.</p> <p>BindIndex - Indicate the index number (1 ~ 64) for the tunnel to be bound.</p> <pre>vpn trunk bind set 1 y vpnlb 1 192.168.10.1~192.168.10.2 192.168.99.1~192.168.99.254 1~65535 0 OFF</pre> <p>ACT - Specify the action. "y" means active; "n" means inactive or delete.</p> <p>TrunkName - TrunkName - Specify the name of the VPN trunk created by using "vpn trunk lb" command.</p> <p>Member - Specify the index number of the LAN to LAN (dial-out) profile to be bound.</p> <p>SrcIp:A-B - Specify the source IP range (e.g., 192.168.10.0~192.168.10.255.</p> <p>DstI p:A-B - Specify the destination IP range (e.g., 192.168.1.0~192.168.1.255.</p> <p>DstPort:A-B - Specify the destination port range (1~65535).</p> <p>Proto - Specify the protocol.</p> <ul style="list-style-type: none"> 0 - any 1 - ICMP 2 - IGMP 6 - TCP 17 - UDP 255 - TCP/UDP <p>Frag - "ON" means to bind the fragmented packet; "OFF" means not to care. It is the default setting.</p>
<p><i>bind insert</i> <After_BindIndex> <ACT></p>	<p>It is used to insert additional load balance policy into an existing policy.</p>

<pre><TrunkName> <Member> <SrcIp:A-B> <DstIp:A-B> <DstPort:A-B> <Proto> <Frag></pre>	<p>After_BindIndex - Specify an index number that new additional policy should be inserted before. See the following example:</p> <pre>vpn trunk bind insert 1 y vpnlb 2 192.168.10.3~192.168.10.200 192.168.99.200~192.168.99.200 80~80 TCP OFF</pre> <p>ACT - Specify the action. "y" means active; "n" means inactive or delete.</p> <p>TrunkName - Specify the name of the VPN trunk.</p> <p>Member - Specify the index number of the LAN to LAN (dial-out) profile to be bound.</p> <p>SrcIp:A-B - Specify the source IP range (e.g., 192.168.10.0~192.168.10.255).</p> <p>DstIp:A-B - Specify the destination IP range (e.g., 192.168.1.0~192.168.1.255).</p> <p>DstPort:A-B - Specify the destination port range (1~65535).</p> <p>Proto - Specify the protocol.</p> <ul style="list-style-type: none"> 0 - any 1 - ICMP 2 - IGMP 6 - TCP 17 - UDP 255 - TCP/UDP <p>Frag - "ON" means to bind the fragmented packet; "OFF" means not to care. It is the default setting.</p>
<pre>SetGre show <Dialout_Index></pre>	<p>Display the GRE over IPsec settings in specified LAN to LAN profile.</p> <p>Dialout_Index - Index number of the LAN to LAN (dial-out) profile.</p>
<pre>SetGre <Active/In-active><Dialout_Index><GRE_MyIP><GRE_PeerIP><Logical_Traffic></pre>	<p>Active/In-active - Specify the action. "y" means active; "n" means inactive.</p> <p>Dialout_Index - Index number of the LAN to LAN (dial-out) profile.</p> <p>GRE_MyIP -Enter the virtual IP for router itself for verified by peer.</p> <p>GRE_PeerIP -Enter the virtual IP of peer host for verified by router.</p> <p>Logical_Traffic - Specify the action for RFC2890. "y" means active; "n" means inactive.</p>
<pre>An_Gre GreIPsecAnalyze <ON/OFF></pre>	<p>These commands are used for RD debug.</p>

Telnet Command: vpn NetBios

This command allows users to enable or disable NetBios for Remote Access User Accounts or LAN-to-LAN Profile.

Syntax

vpn NetBios set <H2I/L2I> <index> <Block/Pass>

Syntax Description

Parameter	Description
<H2I/L2I>	H2I means Remote Access User Accounts. L2I means LAN-to-LAN Profile. Specify which one will be applied by NetBios.
<index>	The index number of the profile.
<Block/Pass>	Pass - Have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, set it block data transmission of Netbios Naming Packet inside the tunnel.

Example

```

> vpn NetBios set H2l 1 Pass
% Remote Dial In Profile Index [1] :
% NetBios Block/Pass: [PASS]

```

Telnet Command: vpn mss

This command allows users to configure the maximum segment size (MSS) for different TCP types.

Syntax

`vpn mss show`

`vpn mss default`

`vpn mss set <connection type> <TCP maximum segment size range>`

Syntax Description

Parameter	Description
<i>show</i>	It means to display current setting status.
<i>default</i>	TCP maximum segment size for all the VPN connection will be set as 1360 bytes.
<i>set</i>	Use it to specify the connection type and value of MSS.
<i><connection type></i>	1-4 represent various type. 1 - PPTP 2 - L2TP 3 - IPSec 4 - L2TP over IPSec
<i><TCP maximum segment size range></i>	Each type has different segment size range. PPTP - 1 ~ 1412 L2TP - 1 ~ 1408 IPSec - 1 ~ 1381 L2TP over IPSec - 1 ~ 1361

Example

```
>vpn mss set 1 1400
% VPN TCP maximum segment size (MSS) :
  PPTP = 1400
  L2TP = 1360
  IPSec = 1360
  L2TP over IPSec = 1360
>vpn mss show
VPN TCP maximum segment size (MSS) :
  PPTP = 1400
  L2TP = 1360
  IPSec = 1360
  L2TP over IPSec = 1360
```

Telnet Command: vpn ike

This command is used to display IKE memory status and leakage list.

Syntax

`vpn ike -q`

Example

```
> vpn ike -q
IKE Memory Status and Leakage List
```

```
# of free L-Buffer=95, minimum=94, leak=1
# of free M-Buffer=529, minimum=529 leak=3
# of free S-Buffer=1199, minimum=1198, leak=1
# of free Msgid-Buffer=1024, minimum=1024
```

Telnet Command: vpn Multicast

This command allows users to pass or block the multi-cast packet via VPN.

Syntax

```
vpn Multicast set <H2I/L2I> <index> <Block/Pass>
```

Syntax Description

Parameter	Description
<H2I/L2I>	H2I means Host to LAN (Remote Access User Accounts). L2I means LAN-to-LAN Profile.
<index>	The index number of the profile.
<Block/Pass>	Set Block/Pass the Multicast Packets. The default is Block.

Example

```
> vpn Multicast set L2I 1 Pass
% Lan to Lan Profile Index [1] :
% Status Block/Pass: [PASS]
```

Telnet Command: vpn pass2nd

This command allows users to determine if the packets coming from the second subnet passing through current used VPN tunnel.

Syntax

```
vpn pass2nd[on]
```

```
vpn pass2nd [off]
```

Syntax Description

Parameter	Description
on/off	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```
> vpn pass2nd on
% 2nd subnet is allowed to pass VPN tunnel!
```

Telnet Command: vpn pass2nat

This command allows users to determine if the packets passing through by NAT or not when the VPN tunnel disconnects.

Syntax

```
vpn pass2nat [on]
```

vpn pass2nat [off]

Syntax Description

Parameter	Description
on/off	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```
> vpn pass2nat on
% Packets would go through by NAT when VPN disconnect!!
```

Telnet Command: vpn sameSubnet

This command allows users to build VPN between clients via virtual subnet.

Syntax

```
vpn sameSubnet -i [value]
vpn sameSubnet -E [0/1]
vpn sameSubnet -e[value]
vpn sameSubnet -I [xxx.xxx.xxx.xxx]
vpn sameSubnet -o [add/del]
vpn sameSubnet -v
```

Syntax Description

Parameter	Description
-i [value]	Specify the index number of VPN profile.
-E [0/1]	Enable or disable the IPsec with the same subnet. 1 - enable. 0 - disable.
-e [value]	Translate specified LAN to virtual subnet. 1 - LAN1 2 - LAN2 3 - LAN3 ...
-I [xxx.xxx.xxx.xxx]	Set the virtual subnet (e.g., 172.16.3.250).
-v	Display current status of virtual subnet.

Example

```
> vpn sameS -i 1 -e 1 -E 1 -e 1 -I 10.10.10.0 -o add
> vpn sameS -v
IPsec with the same subnet:
VPN profile 1 enable,
% translated LAN1 to Virtual subnet: 10.10.10.0
```

Telnet Command: wan ppp_mru

This command allows users to adjust the size of PPP LCP MRU. It is used for specific network.

Syntax

wan ppp_mru <WAN interface number> <MRU size >

Syntax Description

Parameter	Description
<WAN interface number>	Type a number to represent the physical interface. For Vigor130, the number is 1 (which means WAN1).
<MRU size >	It means the number of PPP LCP MRU. The available range is from 1400 to 1600.

Example

```
>wan ppp_mru 1 ?
% Now: 1492

> wan ppp_mru 1 1490
>
> wan ppp_mru 1 ?
% Now: 1490

> wan ppp_mru 1 1492
> wan ppp_mru 1 ?
% Now: 1492
```

Telnet Command: wan mtu / wan mtu2

This command allows users to adjust the size of MTU for WAN1/WAN2.

Syntax

wan mtu [value]

wan mtu2 [value]

Syntax Description

Parameter	Description
value	It means the number of MTU for PPP. The available range is from 1000 to 1500. For Static IP/DHCP, the maximum number will be 1500. For PPPoE, the maximum number will be 1492. For PPTP/L2TP, the maximum number will be 1460.

Example

```
> wan mtu 1100
> wan mtu ?
Static IP/DHCP (Max MSS: 1500)
PPPoE(Max MSS: 1492)
PPTP/L2TP(Max MSS: 1460)
% wan ppp_mss <MSS size: 1000 ~ 1500>
% Now: 1100
```

Telnet Command: wan dns

This command allows users to configure primary and / or secondary DNS server.

Syntax

```
wan dns [wan_no][dns_select][ipv4_addr]
```

Syntax Description

Parameter	Description
<i>wan_no</i>	Select WAN interface. 1 - WAN1 2 - WAN2
<i>dns_select</i>	Specify primary and / or secondary DNS server. pri - It means primary DNS server. sec - It means secondary DNS server.
<i>ipv4_addr</i>	Enter the IP address of DNS server.

Example

```
> wan dns 1 pri 168.95.1.1
% Set WAN1 primary DNS done.
% Now: 168.95.1.1
```

Telnet Command: wan DF_check

This command allows you to enable or disable the function of DF (Don't fragment)

Syntax

```
wan DF_check [on]
```

```
wan DF_check [off]
```

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable DF.

Example

```
> wan DF_check on
%DF bit check enable!
> wan DF_check off
%DF bit check disable (reset DF bit)!
```

Telnet Command: wan disable

This command allows you to disable WAN connection.

Example

```
> wan disable WAN
%WAN disabled.
```

Telnet Command: wan enable

This command allows you to disable wan connection.

Example

```
> wan enable WAN
%WAN1 enabled.
```

Telnet Command: wan forward

This command allows you to enable or disable the function of WAN forwarding. The packets are allowed to be transmitted between different WANs.

Syntax

```
wan forward [on]
```

```
wan forward [off]
```

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable WAN forward.

Example

```
> wan forward ?
%WAN forwarding is Disable!

> wan forward on
%WAN forwarding is enable!
```

Telnet Command: wan status

This command allows you to display the status of WAN connection, including connection mode, TX/RX packets, DNS settings and IP address.

Example

```
> wan status
WAN1: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

PVC_WAN3: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0

PVC_WAN4: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0

PVC_WAN5: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
```

Telnet Command: wan modem / wan modem2

This command, wan modem, allows you to configure 3G/4G USB Modem (PPP mode) of WAN3.

The command, wan modem2, allows you to configure 3G/4G USB Modem (PPP mode) of WAN4.

Syntax

```
wan modem [init/init2/dial/pin][string]
wan modem paponly [on/off]
wan modem backup_wait [value]
wan modem pipe [Int][Din][Dout] (for USB WAN3 only)
wan modem wakeup [on/off/value] (for USB WAN3 only)
wan modem vid [id]
wan modem pid [id]
wan modem status
```

Syntax Description

Parameter	Description
<i>init</i>	Set initial modem AT command (default value is "AT&FE0V1X1&D2&C1S0=0").
<i>init2</i>	Set the second initial modem AT command.
<i>dial</i>	Set dial modem AT command (default value is "ATDT*99#").
<i>pin</i>	Set PIN code for SIM card. "0":disable
<i>paponly</i>	It means PAP Only. Set the PPP authentication of the USB WAN. on: None. off: PAP or CHAP.
<i>backup_wait</i>	Set waiting time after boot if USB WAN is in backup mode. This waiting time is reserved for the dial of main WANs so that the backup USB WAN will not go up first. Available setting is from 1 to 255. Unit is second.
<i>pipe</i>	It is for RD debug only. Please don't use it without our advice.
<i>wakeup [on/off]</i>	It is for RD debug only. Please don't use it without our advice.
<i>vid</i>	Set VID of VID/PID match to bind the USB modem to specify WAN interface. By default, this match is not set (0x0/0x0) and the router specifies WAN interface by USB port.
<i>pid</i>	Set PID of VID/PID match to bind the USB modem to specify WAN interface. By default, this match is not set (0x0/0x0) and the router specifies WAN interface by USB port.
<i>status</i>	Display current status of USB modem.

Example

```
> wan modem pin 0000
> wan modem status
Modem Link Speed=0
Current Signal Strength=0
Last Fail Message:
Current Connect Stage:
```

Telnet Command: wan wimax

This command allows you to enable or disable WAN 3G/4G DHCP mode for Vigor router.

Syntax

wan wimax [*on/off*]

Syntax Description

Parameter	Description
<i>On</i>	It means to enable WAN 3G/4G DHCP mode.
<i>off</i>	It means to disable WAN 3G/4G DHCP mode.

Example

```
> wan wimax ?
Current status is wimax OFF
> wan wimax on
>
```

Telnet Command: wan lte

This command allows you to configure LTE WAN (for L model only).

Syntax

wan lte auth [*0/1*]

wan lte band

wan lte del [*index #/all*]

wan lte pass [*string*]

wan lte quota [*-<command><parameter>I...*]

wan lte read [*index #/all*]

wan lte reboot [*-<command><parameter>I...*]

wan lte reply [*-<command><parameter>I...*]

wan lte send [*number*][*message*]

wan lte stus

wan lte tag [*index #/all*]

wan lte user [*string*]

wan lte wms [*send[cdma/gwpp]/recv[cdma/gwgw]/setting*]

Syntax Description

Parameter	Description
<i>auth [0/1]</i>	Set PPP authentication of LTE WAN. 0: None. 1: PAP or CHAP.
<i>band</i>	Display working band information for LTE network connection.
<i>del [index #/all]</i>	Delete an SMS from the LTE SIM card by specifying the index number. Use "all" to delete all.
<i>pass</i>	Set the password of LTE WAN.
<i>quota</i> <i>[-<command><parameter>I...</i> <i>]</i>	Set settings of SMS Quota Limit function. Available commands with parameter are listed below:

	<p>[...] means that you can type in several commands in one line.</p> <p>-a <0/1>: Set whether to send an e-mail alert when SMS quota exceeded. (0: no 1: yes)</p> <p>-c <cycle>: Set the order of today in refresh cycle.</p> <p>-d <day>: Set the refresh day.</p> <p>-e <0/1>: Enable or disable SMS Quota Limit function. (0: disable 1: enable)</p> <p>-h <hour>: Set the refresh hour.</p> <p>-m <0/1/2>: Set SMS quota refresh mode. (0: None 1: monthly 2: periodically)</p> <p>-n <number>: Set SMS quota. The available number is between 1 and 1000000.</p> <p>-s <0/1>: Set whether to stop sending SMS after SMS quota exceeded. (0: no 1: yes)</p>
<i>read</i>	<p>Display information of an SMS in the LTE SIM card by specifying the index number. Use "all" to display all.</p>
<i>reboot</i>	<p>Set settings of Reboot on SMS Message function.</p> <p><command> <parameter> ...</p> <p>The available commands with parameters are listed below.</p> <p>[...] means that you can type in several commands in one line.</p> <p>-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)</p> <p>-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)</p> <p>-p <password>: Set the Password / PIN. This setting is necessary if this function is enabled.</p> <p>-x <number>: Set the first phone number in Access Control List.</p> <p>-y <number>: Set the second phone number in Access Control List.</p> <p>-z <number>: Set the third phone number in Access Control List.</p>
<i>reply</i>	<p>Set settings of Reply with Router Status Message function.</p> <p><command> <parameter> ...</p> <p>The available commands with parameters are listed below.</p> <p>[...] means that you can type in several commands in one line.</p> <p>-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)</p> <p>-c <0/1>: Set whether to reply with MAC address. (0: no 1: yes)</p> <p>-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)</p> <p>-f <0/1>: Set whether to reply with WAN1 IP address. (0: no 1: yes)</p> <p>-g <0/1>: Set whether to reply with WAN2 IP address. (0: no 1: yes)</p> <p>-h <0/1>: Set whether to reply with LTE WAN IP address. (0: no 1: yes)</p> <p>-i <0/1>: Set whether to reply with WAN4 IP address. (0: no 1: yes)</p> <p>-j <0/1>: Set whether to reply with WAN1 data usage. (0: no 1: yes)</p> <p>-k <0/1>: Set whether to reply with WAN2 data usage. (0: no 1: yes)</p> <p>-l <0/1>: Set whether to reply with LTE WAN data usage. (0: no 1: yes)</p> <p>-m <0/1>: Set whether to reply with WAN4 data usage. (0: no 1: yes)</p> <p>-n <0/1>: Set whether to reply with Router name. (0: no 1: yes)</p> <p>-p <password>: Set the Password / PIN. This setting is necessary if this function is enabled.</p> <p>-u <0/1>: Set whether to reply with Router system uptime. (0: no 1: yes)</p> <p>-v <0/1>: Set whether to reply with Router firmware version. (0: no</p>

	1: yes) -x <number>: Set the first phone number in Access Control List. -y <number>: Set the second phone number in Access Control List. -z <number>: Set the third phone number in Access Control List.
<i>send</i>	Send an SMS message to the specified phone number through the LTE SIM card.
<i>stus</i>	Display status of LTE connection.
<i>tag</i>	Set an SMS in the LTE SIM card as read state by specifying the index number. Use "all" to set all SMS as read state.
<i>user</i>	Set the UserName of LTE WAN.
<i>wms</i>	This command is for RD debug only. We use it to test new USB modems. Please don't use it without our advice.

Example

```
> wan lte band

Access technology : LTE
Access band information : E-UTRA Op Band 3
Interfere with 2.4G WLAN : NO
Active channel: 1725
>wan lte stus
Status: Operational. (Online)
Access Tech: LTE
Band: E-UTRA Op Band 3
ISP: Chunghwa
MCC: 466, MNC: 92, LAC: 65534, Cell ID: 81023501
Max Channel TX Rate: 50000000 bps
Max Channel RX Rate: 100000000 bps
IMEI: 356318040749422
IMSI: 466924200859808
RSSI: -61 dBm
Unread SMS: 4
SMSC address: +886932400821
SMS service status : Ready
Number of SMS sent : 0
```

Telnet Command: wan detect

This command allows you to configure WAN connection detection. When Ping Detection is enabled (for Static IP or DHCP or PPPoE mode), Router pings specified IP addresses to detect the WAN connection.

Syntax

```
wan detect [wan1/wan2][on/off/always_on]
wan detect [wan1/wan2] target [ip addr]
wan detect [wan1/wan2] target2[ip addr]
wan detect [wan1/wan2] target_gw [1/0]
wan detect [wan1/wan2] ttl [value]
wan detect [wan1/wan2] interval [interval]
wan detect [wan1/wan2] retry [retry]
wan detect status
```

Syntax Description

Parameter	Description
<i>on</i>	Enable ping detection. The IP address of the target shall be set.
<i>off</i>	Enable ARP detection (default).
<i>always_on</i>	Disable link detect, always connected(only support static IP)
<i>target</i>	Set the ping target.
<i>Target2</i>	Set the secondary ping target.
<i>Target_gw</i>	Set whether to use gateway as ping target. (1: yes 0: no) Note that USB WAN (PPP mode) cannot support PING gateway
<i>ip addr</i>	It means the IP address used for detection. Type an IP address in this field.
<i>tll</i>	It means to set the ping TTL value (work as trace route) If you do not set any value for ttl here or just type 0 here, the system will use default setting (255) as the ttl value.
<i>interval [interval]</i>	Set the interval between each ping operation. Available setting is between 1 and 3600. The unit is second. <i>[interval]</i> : Type a value.
<i>retry [retry]</i>	Set how many ping operations are retried before the Router judges that the WAN connection is disconnected. Available setting is between 1 and 255. The unit is times. <i>[retry]</i> : Type a number.
<i>status</i>	It means to show the current status.

Example

```

> wan detect status
WAN1: always on
WAN2: off
WAN3: off
WAN4: off
WAN5: off
> wan detect wan1 target 192.168.1.78
Set OK

> wan detect wan1 on
Set OK

> wan detect status
WAN1: on, Target=192.168.1.78, TTL=255
WAN2: off
WAN3: off
WAN4: off
WAN5: off
>

```

Telnet Command: wan lb

This command allows you to Enable/Disable for each WAN to join auto load balance member.

Syntax

`wan lb [wan1/wan2/...] on`

`wan lb [wan1/wan2/...] off`

wan lb status

Syntax Description

Parameter	Description
<i>wan1/wan2</i>	Specify which WAN will be applied with load balance.
<i>on</i>	Make WAN interface as the member of load balance.
<i>off</i>	Cancel WAN interface as the member of load balance.
<i>status</i>	Show the current status.

Example

```
> wan lb status
WAN1 : on
WAN2 : on
WAN3 : on
WAN4 : on
WAN5 : on
WAN6 : on
WAN7 : on
```

Telnet Command: wan mvlan

This command allows you to configure multi-VLAN for WAN and LAN. It supports pure bridge mode (modem mode) between Ethernet WAN and LAN port 2~4.

Syntax

`wan mvlan [pvc_no/status/save/enable/disable] [on/off/clear/tag tag_no] [service type/vlan priority] [px ...]`

`wan mvlan keptag[pvc_no][on/off]`

Syntax Description

Parameter	Description
<i>pvc_no</i>	It means index number of PVC. There are 10 PVC, 0(Channel-1) to 9(Channel-9) allowed to be configured. However, bridge mode can be set on PVC number 2 to 9.
<i>status</i>	It means to display the whole Bridge status.
<i>save</i>	It means to save the configuration into flash of Vigor router.
<i>enable/disable</i>	It means to enable/disable the Multi-VLAN function.
<i>on/off</i>	It means to turn on/off bridge mode for the specific channel.
<i>clear</i>	It means to turn off/clear the port.
<i>tag tag_no</i>	It means to tag a number for the VLAN. -1: No need to add tag number. 1-4095: Available setting numbers used as tagged number.
<i>service type</i>	It means to specify the service type for VLAN. 0: Normal. 1: IGMP.
<i>vlan priority</i>	It means to specify the priority for the VALN setting. Range is from 0 to 7.
<i>px</i>	It means LAN port. Available setting number is from 2 to 4. Port number 1 is locked for NAT usage.
<i>keptag</i>	It means Multi-VLAN packets will keep their VLAN headers to LAN.

Example

PVC 7 will map to LAN port 2/3/4 in bridge mode; service type is Normal. No tag added.

```

> > wan mvlan 7 on p2 p3 p4
PVC Bridge p1 p2 p3 p4 p5 p6 Service Type Tag Priority Keep Tag
-----
7 ON 0 0 1 1 0 0 Normal 0(OFF) 0 OFF
>

```

Telnet Command: wan multifno

This command allows you to specify a channel (in Multi-PVC/VLAN) to make bridge connection to a specified WAN interface.

Syntax

`wan multifno [channel #] [WAN interface #]`

`wan multifno status`

Syntax Description

Parameter	Description
<i>channel #</i>	There are 4 (?) channels including VLAN and PVC. Available settings are: 1=Channel 1 3=Channel 3 4=Channel 4 5=Channel 5
<i>WAN interface #</i>	Type a number to indicate the WAN interface. 1=WAN1 2=WAN2
<i>status</i>	It means to display current bridge status.

Example

```
> wan multifno 5 1
% Configured channel 5 uplink to WAN1
> wan multifno status
> wan multifno status
% Channel 5 uplink ifno: 3
% Channel 6 uplink ifno: 3
% Channel 7 uplink ifno: 3
% Channel 8 uplink ifno: 3
% Channel 9 uplink ifno: 3
>
```

Telnet Command: wan vlan

This command allows you to configure the VLAN tag of WAN1 or WAN2.

Syntax

`wan vlan wan [#] tag [value]`

`wan vlan wan [#] [enable/disable]`

`wan vlan stat`

Syntax Description

Parameter	Description
<i>wan [#]</i>	Specify which WAN interface will be tagged.
<i>tag [value]</i>	Type a number for tagging on WAN interface.
<i>enable/disable</i>	Enable: Specified WAN interface will be tagged. Disable: Disable the function of tagging on WAN interface.
<i>stat</i>	Display current VLAN status.

Example

```
> wan vlan stat
% Interface      Pri      Tag      Enabled
% =====
% WAN1 (ADSL)    0        0
% WAN1 (VDSL)    0        0
% WAN2           0        0
```

Telnet Command: wan phyvlan

This command is used to set VLAN tag insertion for outer tag (service) for WAN interface. WAN interfaces must be configured first before setting VLAN encapsulation.

Syntax

wan phyvlan wan [#] tag [value]

wan phyvlan wan [#] pri [value]

wan phyvlan wan [#] [enable|disable]

wan phyvlan stat

Syntax Description

Parameter	Description
[#]	It means WAN interface. 1 - WAN1 2 - WAN2
tag [value]	It means to tag a value onto the selected WAN interface.
pri [value]	It means to set value for priority for such VLAN tag.
[enable disable]	It means to enable / disable the VLAN tag.
stat	Display the setting status.

Example

```
> wan phyvlan wan 1 tag 22
% Set physical port tag to 22 for WAN1
% Set physical port tag to 22 for WAN1
% You need to reboot router making config effective
DrayTek> wan phyvlan stat ?
% Interface      Pri      Tag      Enabled
% =====
% WAN1           0        22
% WAN2           0         0
```

Telnet Command: wan budget

This command allows you determine the data *traffic volume* for each WAN interface respectively to prevent from overcharges for data transmission by the ISP.

Syntax

wan budget wan [#] rdate [day] [hour]

wan budget wan [#] [enable|disable]

wan budget wan [#] thres [budget limit (MB)]

wan budget wan [#] gthres [budget limit (GB)]

wan budget wan [#] mode [monthly|periodic|none]

wan budget wan [#] psday [th day in periodic]

wan budget wan [#] action [action bitmap]

wan budget status

Syntax Description

Parameter	Description
wan[#]	Specify the WAN interface.

<i>rdate</i>	Specify the WAN budget refresh time. day - Available settings are from 1 to 30. hour - Available settings are from 1 to 23. E.g., wan budget wan 1 rdate 5 10 If monthly mode is selected: WAN budget will be refreshed on 5th day at 10:00 in each month If periodic mode is selected: WAN budget will be refreshed every 5 days and 10 hours
<i>enable/disable</i>	enable - Enable the function of wan budget. disable - Disable the function of wan budget.
<i>thres [budget limit (MB)]</i>	Specify the maximum value for WAN budget limit. (Unit: MB) budget limit - Type a number.
<i>gthres [budget limit (GB)]</i>	Specify the maximum value of wan budget limit. (Unit: GB) budget limit - Type a number.
<i>mode [monthly periodic none]</i>	Specify the calculation mode (monthly, periodically, or none) for WAN budget.
<i>psday [th day in periodic]</i>	It is used only when mode is set with "periodic". Specify the order of "today" in the cycle. E.g., wan budget wan 5 psday → It means "today" is the 5 th day in the billing cycle.
<i>action [action bitmap]</i>	Determine the action to be performed when it reaches the WAN budget limit. <i>action bitmap</i> - Type a total number of actions to be executed. Different numbers represent different actions. 1: shutdown wan 2: send mail alert 4: send sms alert For example, if you type "5" (5=1+4), the system will send SMS alert when WAN shutdown is detected.
<i>status</i>	Display current configuration status of WAN budget.

Example

```
> wan budget wan 1 action 5
% WAN 1 budget action set to 5
> wan budget wan 1 gthres 10
% WAN 1 budget limit set to 10 GB
```

Telnet Command: wan detect_mtu

This command allows you to run a WAN MTU Discovery. The user can specify an IPv4 target to ping and find the suitable MTU size of the WAN interface.

Syntax

```
wan detect_mtu -w [number] -i [Host/IP address] -s [base_size] -d [decrease_size] (-c [count])
```

Syntax Description

Parameter	Description
<i>-w [number]</i>	Specify the WAN interface. Value: Enter the number of WAN interface. 1: WAN1; 2:WAN2....and etc.
<i>-i [Host/IP address]</i>	Specify the IPv4 target to detect. It can be an IPv4 address or domain name. Host/IP address: Enter the IP address/domain name of the target.
<i>-s [base_size]</i>	Set the MTU size base for Discovery. base_size: Available setting is 1000 ~ 1500.
<i>-d [decrease size]</i>	Set the MTU size to decrease between detections. decrease size: Available setting is 1 ~ 100.
<i>-c [count]</i>	Set the maximum times of ping failure during a Discovery. count: Available settings are 1 ~ 10. Default value is 3.

Example

```
> wan detect_mtu -w 2 -i 8.8.8.8 -s 1500 -d 30 -c 10
detecting mtu size:1500!!!

mtu size:1470!!!
```

Telnet Command: wan detect_mtu6

This command allows you to run a WAN MTU Discovery. The user can specify an IPv6 target to ping and find the suitable MTU size of the WAN interface.

Syntax

```
wan detect_mtu6 -w [number] -i [IPv6 address] -s [base_size]
```

Syntax Description

Parameter	Description
<i>-w [number]</i>	Specify the WAN interface number: Enter the number of WAN interface. 1: WAN1; 2:WAN2...and etc.
<i>-i [IPv6 address]</i>	Specify the IPv6 target to detect. It must be an IPv6 IP address. IPv6 address: Enter the IPv6 address of the target.
<i>-s [base_size]</i>	Specify the size of MTU. base_size: Available setting is 1000 - 1500.

Example

```
> wan detect_mtu6 -w 2 -i 2404:6800:4008:c06::5e -s 1500
>
```

Telnet Command: failover

This command is used to configure failover WAN.

Syntax

```
wan failover off [index]
```

```
wan failover on [1][2][3][4][5][6]
```

```
wan failover show [index]
```

Syntax Description

Parameter	Description
<i>failover off [index]</i>	Set specified WAN interface to always on. index - Ranges from 1 to 4.
<i>failover on [1][2][3][4][5][6]</i>	There are six fields which represent different options. Field 1 - Specify WAN interface as failover WAN by typing 1 to 4. Field 2 - Enable / disable the action for the failover WAN. Such action is "Active When selected WAN [disconnect/reached traffic threshold]". 0 - Disable 1 - Enable Field 3 - Enable / disable the action for the failover WAN. Such action is "Active When [any/all] of selected WAN disconnect or reached traffic threshold". 0 - Disable 1 - Enable Field 4 - Specify main WAN by typing 1 to 4. The main WAN will be set to always on.

	Field 5 - Specify traffic threshold [Download threshold(Kbps)]. Field 6 - Specify traffic threshold [Upload threshold (Kbps)]. For example, WAN 2 will be set as failover, and will be active when any of selected WANs has reached traffic threshold. WAN 4 is the selected WAN. Download threshold : 50 Kbps; Upload threshold : 20 Kbps. You can type as follows: <i>wan failover on 2 1 0 4 50 20</i>
<i>show [index]</i>	Display parameters settings for WAN interface. index - Ranges from 1 to 4.

Example

```
> wan failover on 2 1 0 4 50 20
> wan failover show 2
wan2 Active Mode : Failover
Active when : Any of the selected WANs reached the Traffic Threshold
Traffic Download Threshold : 50 Kbps
Traffic Upload Threshold : 20 Kbps
> wan failover show 3
wan3 Active Mode : Always ON.
```

Telnet Command: hsportal setup

This command is used to configure a profile (Hotspot Web Portal) with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router.

Syntax

hsportal -p <profile> [-l <lan>] [-s <ssid>] ...

hsportal -p <profile> -c

Syntax Description

Parameter	Description
<i>-p</i>	Indicate available profile to be configured. Number of profile: 1 /2 /3 / 4.
<i>-l</i>	Apply to LAN interfaces. E.g., apply LAN1 and LAN2: -l 1, 2.
<i>-s</i>	Apply to WLAN interfaces. E.g., apply SSID1 and SSID2: -s 1, 2.
<i>-a</i>	Apply to WLAN5G interfaces. E.g., apply SSID1 and SSID2: -s 1, 2.
<i>-m</i>	Select login mode. 0:skip 1:click 2:social 3:pin 4:social or pin
<i>-f</i>	Configure facebook login. 0: disable. 1: enable.
<i>-g</i>	Configure google login. 0: disable. 1: enable.
<i>-h</i>	Enable HTTPS redirection. 0: disable. 1: enable.
<i>-v</i>	Enable portal detection. 0: disable.

	1: enable.
-i	Configure APP id. For example, to configure facebook APP id, you can type: >hsportal -p 1 -f -i this_is_app_id Profile 1 set facebook login disabled ... [OK]
-k	Configure app key. For example, to configure google APP key, you can type: > hsportal -p 1 -g -i this_is_app_key Profile 1 set google login disabled ... [OK]
-r	Configure landing page mode. 0: fixed URL. 1: user request. 2: bulletin. E.g. > hsportal -p 1 -r 0 Profile 1 set landing page mode 0 ... [OK]
-e	Enable the specified profile.
-d	Disable the specified profile.
-c	Reset the specified profile. Number of profile: 1 /2 /3 / 4.
-o	Clear profiles for all clients.

Example

```
> hsportal -p 1 -c
Reset profile 1 ... [OK]
> hsportal -p 1 -r 0
Profile 1 set landing page mode 0 ... [OK]
> hsportal -p 2 -g 1 -k app_key_google
Profile 2 set google login enabled ... [OK]
Profile 2 set API KEY ... [OK]
>
```

Telnet Command: hsportal info

This command is used to enable /disable database, notification, specify object profile for information related to hotspot web portal users.

Syntax

hsportal info -e [0/1]

hsportal info -c

hsportal info -n [0/1]

hsportal info -a [0/1]

hsportal info -m [1-10]

hsportal info -s [1-10]

Syntax Description

Parameter	Description
-e [0/1]	Enable database to record information. 0 - disable 1 - enable
-c	Clear user information database.
-n [0/1]	Enable notification for user information. 0 - disable 1 - enable
-a [0/1]	Enable auto backup and start a new record for user information. 0 - disable

	1 - enable
<i>-m [1~10]</i>	Set email notification object. [1~10]- Index number of object profile.
<i>-s [1~10]</i>	Set SMS notification object. [1~10]- Index number of object profile.

Example

```
> hsportal info -e 1
Enabled database to record information ... [OK]
> hsportal info -a 1
Enabled auto backup and start a new record for user information ... [OK]
```

Telnet Command: wl acl

This command allows the user to configure wireless access control settings.

Syntax

```
wl acl enable [ssid1 ssid2 ssid3 ssid4]
wl acl disable [ssid1 ssid2 ssid3 ssid4]
wl acl add [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]
wl acl del [MAC]
wl acl mode [ssid1 ssid2 ssid3 ssid4] [white/black]
wl acl show
wl acl showmode
wl acl clean
```

Syntax Description

Parameter	Description
<i>enable [ssid1 ssid2 ssid3 ssid4]</i>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable [ssid1 ssid2 ssid3 ssid4]</i>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]</i>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>del [MAC]</i>	It means to delete a MAC address entry defined in the access control list.
<i>mode [ssid1 ssid2 ssid3 ssid4] [white/black]</i>	It means to set white/black list for each SSID.
<i>wl acl show</i>	It means to show access control status.
<i>wl acl showmode</i>	It means to show the mode for each SSID.
<i>wl acl clean</i>	It means to clean all access control setting.

Example

```
> > wl acl showmode
```

```

ssid1: none
ssid2: none
ssid3: none
ssid4: none
> wl acl add 00-50-70-ff-12-70
Set Done !!
> wl acl add 00-50-70-ff-12-70 ssid1 ssid2 isolate
Set Done !!
> wl acl show
-----Enable Mac Address Filter-----
ssid1: dis  ssid2: dis  ssid3: dis  ssid4: dis
-----MAC Address Filter-----
Index  Attribute      MAC Address      Associated SSIDs
  0                00:50:70:ff:12:70  ssid1 ssid2 ssid3 ssid4
  1                s                  00:50:70:ff:12:70  ssid1 ssid2

s: Isolate the station from LAN
>

```

Telnet Command: wl config

This command allows users to configure general settings and security settings for wireless connection.

Syntax

- wl config mode *[value]*
- wl config mode show
- wl config channel *[number]*
- wl config preamble *[enable]*
- wl config txburst *[enable]*
- wl config ssid *[ssid_num enable ssid_name [hidden_ssid]]*
- wl config security *[SSID_NUMBER] [mode]*
- wl config ratectl *[ssid_num enable upload download]*
- wl config isolate *[ssid_num lan member]*

Syntax Description

Parameter	Description
<i>mode[value]</i>	It means to select connection mode for wireless connection. Available settings are: "11bgn", "11gn", "11n", "11bg", "11g", or "11b".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel [number]</i>	It means the channel of frequency of the wireless LAN. The available settings are 0,1,2,3,4,5,6,7,8,9,10,11,12 and 13. number=0, means Auto number=1, means Channel 1 number=13, means Channel 13.
<i>preamble [enable]</i>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble.

	<p>0: disable to use long preamble. 1: enable to use long preamble.</p>
<i>txburst [enable]</i>	<p>It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time.</p> <p>0: disable the function. 1: enable the funciton.</p>
<i>ssid[ssid_num enable ssid_name [hidden_ssid]]</i>	<p>It means to set the name of the SSID, hide the SSID if required.</p> <p><i>ssid_num</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>ssid_name</i>: Give a name for the specified SSID. <i>hidden_ssid</i>: Type 0 to hide the SSID or 1 to display the SSID</p>
<i>Security [SSID_NUMBER] [mode][key][index]</i>	<p>It means to configure security settings for the wireless connection.</p> <p><i>SSID_NUMBER</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>mode</i>: Available settings are:</p> <p>disable: No security. wpa1x: WPA/802.1x Only wpa21x: WPA2/802.1x Only wpamix1x: Mixed (WPA+WPA2/802.1x only) wep1x: WEP/802.1x Only wpapsk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK wep: WEP</p> <p><i>key, index</i>: Moreover, you have to add keys for <i>wpapsk</i>, <i>wpa2psk</i>, <i>wpamixpsk</i> and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format.</p>
<i>ratectl [ssid_num enable upload download]</i>	<p>It means to set the rate control for the specified SSID.</p> <p><i>ssid_num</i>: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>enable</i>: It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable.</p> <p><i>upload</i>: It means to configure the rate control for data upload. The unit is kbps.</p> <p><i>download</i>: It means to configure the rate control for data download. The unit is kbps.</p>
<i>isolate [ssid_num lan member]</i>	<p>It means to isolate the wireless connection for LAN and/or Member.</p> <p><i>lan</i> - It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other.</p> <p><i>member</i> - It can make the wireless clients (stations) with the same SSID not accessing for each other.</p>

Example

```

> wl config mode 11bgn
Current mode is 11bgn
% <Note> Please restart wireless after you set the channel
> wl config channel 13
Current channel is 13
% <Note> Please restart wireless after you set the channel.
> wl config preamble 1
Long preamble is enabled

```

```

% <Note> Please restart wireless after you set the parameters.
> wl config ssid 1 enable dray
  SSID  Enable  Hide_SSID  Name
  1      1      0          dray
% <Note> Please restart wireless after you set the parameters.
> wl config security 1 wpa1x
%% Configured Wlan Security Setting:
% SSID1
%% Mode: wpa1x
%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)

```

Telnet Command: wl set

This command allows users to configure basic wireless settings.

Syntax

```
wl set [SSID] [CHAN[En]]
```

```
wl set txburst [enable]
```

Syntax Description

Parameter	Description
<i>SSID</i>	It means to Enter the SSID for the router. The maximum character that you can use is 32.
<i>CHAN[En]</i>	It means to specify required channel for the router. <i>CHAN</i> : The range for the number is between 1 ~ 13. <i>En</i> : type <i>on</i> to enable the function; type <i>off</i> to disable the function.
<i>txburst [enable]</i>	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function. 1: enable the function.

Example

```

> wl set MKT 2 on
% New Wlan Setting is:
% SSID=MKT
% Chan=2
% Wl is Enable

```

Telnet Command: wl act

This command allows users to activate wireless settings.

Syntax

`wl act [En]`

Syntax Description

Parameter	Description
<i>En</i>	It means to enable or disable the function of VPN isolation. 0: diable 1: enable

Example

```
> wl act on
% Set Wlan to Enable.
```

Telnet Command: wl scan

This command allows users to perform AP scanning.

Syntax

`wl scan [start]`

`wl scan set [wlist/blist/stime][MAC]`

`wl scan del [wlist/blist] [MAC]`

`wl scan filter [ssid/channel/mac]`

`wl scan show [0/1/2/3]`

Syntax Description

Parameter	Description
<i>start</i>	It means to start AP scanning.
<i>set [wlist/blist/stime] [MAC]</i>	Set white list/block list/scan time. <i>wlist</i> - It means to set white list for passing. MAC address must be added in the end. e.g., <code>wl scan set wlist 001122aabbcc</code> <i>blist</i> - It means to set black list for blocking. MAC address must be added in the end. <i>stime</i> - It means to set scanning time. Time value (2-5 second) must be added in the end. e.g., <code>wl scan set time 5</code>
<i>del</i>	Remove white list/block list. e.g., <code>wl scan del wlist 001122aabbcc</code>
<i>filter</i>	Set which filter you want. <i>ssid</i> - scanning the AP based on SSID setting. <i>channel</i> - scanning the AP based on channel setting. <i>mac</i> - scanning the AP based on MAC address setting..
<i>show [0/1/2/3]</i>	It is used to show AP list. 0 - display white list 1 - display block list,

2 - display gray/unknown list, 3 - display all list
--

Example

```
> wl scan set wlist 001122aabbcc
> wl scan start
> wl scan show 3
>
```

Telnet Command: wl stamgt

This command is used to configure connection time and reconnection time for each SSID that wireless client used for accessing into Internet.

Syntax

`wl stamgt [enable/disable] [ssid_num].`

`wl stamgt [show] [ssid_num].`

`wl stamgt set [ssid_num] [c] [r]`

`wl stamgt reset [ssid_num].`

Syntax Description

Parameter	Description
<i>enable/disable</i>	It means to enable/disable the station management control.
<i>ssid_num</i>	It means channel selection. Available channel for 2.4G: 0/1/2/3 Available channel for 5G: 4/5/6/7.
<i>show</i>	It means to display status or configuration of the selected channel.
<i>c</i>	It means connection time. The unit is minute.
<i>r</i>	It means reconnection time. The unit is minute.

Example

```
> wl stamgt enable 1
% Station Management Status: enabled
> wl stamgt set 1 60 60
> wl stamgt show 1
NO. SSID          BSSID          Connect time  Reconnect time
1. Draytek       00:11:22:aa:bb:cc 0d:0:58:26    0d:0:0
```

Telnet Command: wl iso_vpn

This command allows users to activate the function of VPN isolation.

Syntax

`wl iso_vpn [ssid] [En]`

Syntax Description

Parameter	Description
<i>ssid</i>	It means the number of SSID.

	1: SSID1 2: SSID2 3: SSID3 4: SSID4
<i>En</i>	It means to enable or disable the function of VPN isolation. 0: disable 1: enable

Example

```
> wl iso_vpn 1 on
% ssid: 1 isolate vpn on :1
```

Telnet Command: **wl wpa**

This command allows you to configure WPA wireless settings.

Syntax

`wl wpa 1/2/3`

Syntax Description

Parameter	Description
<i>wl wpa</i>	Type 1/2/3 to represent different WPA modes. 1 - means WPA+WPA2 2 - means WPA2 Only 3 - means WPA Only

Example

```
> wl wpa 1
>
```

Telnet Command: **wl wmm**

This command allows users to set WMM for wireless connection. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs).

Syntax

```
wl wmm ap QueIdx Aifsn Cwmin Cwmax Txop ACM
wl wmm bss QueIdx Aifsn Cwmin Cwmax Txop ACM
wl wmm ack Que0_Ack Que1_Ack Que2_Ack Que3_Ack
wl wmm enable SSID0 SSID1 SSID2 SSID3
wl wmm apsd value
wl wmm show
```

Syntax Description

Parameter	Description
<i>ap</i>	It means to set WMM for access point.
<i>bss</i>	It means to set WMM for wireless clients.
<i>ack</i>	It means to map to the Ack policy settings of AP WMM.

<i>enable</i>	It means to enable the WMM for each SSID. 0: disable 1: enable
<i>Apsd [value]</i>	It means to enable / disable the ASPD(automatic power-save delivery) function. 0: disable 1: enable
<i>show</i>	It displays current status of WMM.
<i>QueIdx</i>	It means the number of the queue which the WMM settings will be applied to. There are four queues, best effort, background, voice, and video.
<i>Aifsn</i>	It controls how long the client waits for each data transmission.
<i>Cwmin/ Cwmax</i>	CWMin means contention Window-Min and CWMax means contention Window-Max. Specify the value ranging from 1 to 15.
<i>Txop</i>	It means transmission opportunity. Specify the value ranging from 0 to 65535.
<i>ACM</i>	It can restrict stations from using specific category class if it is enabled. 0: disable 1: enable

Example

```

> wl wmm ap 0 3 4 6 0 0
  QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
> wl wmm enable 1 0 1 0
  WMM_SSID0 =1, WMM_SSID1 =0,WMM_SSID2 =1,WMM_SSID3 =0
> wl wmm show
  Enable WMM: SSID0 =1, SSID1 =0,SSID2 =1,SSID3 =0
  APSD=0
  QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
  QueIdx=1: APAifsn=7,APCwmin=4,APCwmax=10, APTxop=0,APACM=0
  QueIdx=2: APAifsn=1,APCwmin=3,APCwmax=4, APTxop=94,APACM=0
  QueIdx=3: APAifsn=1,APCwmin=2,APCwmax=3, APTxop=47,APACM=0
  QueIdx=0: BSSAifsn=3,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
  QueIdx=1: BSSAifsn=7,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
  QueIdx=2: BSSAifsn=2,BSSCwmin=3,BSSCwmax=4, BSSTxop=94,BSSACM=0
  QueIdx=3: BSSAifsn=2,BSSCwmin=2,BSSCwmax=3, BSSTxop=47,BSSACM=0
  AckPolicy[0]=0: AckPolicy[1]=0,AckPolicy[2]=0,AckPolicy[3]=0

```

Telnet Command: wl ht

This command allows you to configure wireless settings.

Syntax

wl ht bw value

wl ht gi value

wl ht badecline value

wl ht autoba value

wl ht rdg value

wl ht msdu value

wl ht txpower value

wl ht antenna value

wl ht greenfield value

Syntax Description

Parameter	Description
<i>wl ht bw value</i>	The value you can type is 0 (for BW_20) and 1 (for BW_40).
<i>wl ht gi value</i>	The value you can type is 0 (for GI_800) and 1 (for GI_4001)
<i>wl ht badecline value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht autoba value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht rdg value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht msdu value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht txpower value</i>	The value you can type ranges from 1 - 6 (level).
<i>wl ht antenna value</i>	The value you can type ranges from 0-3. 0: 2T3R 1: 2T2R 2: 1T2R 3: 1T1R
<i>wl ht greenfield value</i>	The value you can type is 0 (for mixed mode) and 1 (for green field).

Example

```
> wl ht bw value 1
  BW=0
  <Note> Please restart wireless after you set new parameters.
> wl restart
  Wireless restart.....
```

Telnet Command: wl restart

This command allows you to restart wireless setting.

Example

```
> wl restart
Wireless restart.....
```

Telnet Command: wl wds

This command allows you to configure WDS settings.

Syntax

`wl wds mode [value]`

`wl wds security [value]`

`wl wds ap [value]`

`wl wds hello [value]`

`wl wds status`

`wl wds show`

`wl wds mac [value]`

`wl wds flush`

Syntax Description

Parameter	Description
<code>mode [value]</code>	It means to specify connection mode for WDS. [value]: Available settings are : d: Disable b: Bridge r: Repeater
<code>security [value]</code>	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK wpa2psk [key]: WPA2/PSK <i>key</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. e.g., <code>wl dual wds security disable</code> <code>wl dual wds security wep 12345</code> <code>wl dual wds security wpa2psk 12345678</code>
<code>ap [value]</code>	It means to enable or disable the AP function. Value: 1 - enable the function. 0 - disable the function.
<code>hello [value]</code>	It means to send hello message to remote end (peer). Value: 1 - enable the function.

	0 - disable the function.
<i>status</i>	It means to display WDS link status for 2.4GHz connection.
<i>show</i>	It means to display current WDS settings.
<i>mac add [index addr]</i>	add <i>[index addr]</i> - Add the peer MAC entry in Repeater/Bridge WDS MAC table.
<i>mac clear/disable/enable [index/all]</i>	clear/disable/enable <i>[index/all]</i> - Clear, disable, enable the specified or all MAC entries in Repeater/Bridge WDS MAC table. e.g, <i>wl dual wds mac enable 1</i>
<i>flush</i>	It means to reset all WDS setting.

Example

```

> wl wds status
Please enable WDS hello function first.

> wl wds hello 1
% <Note> Please restart router after you set the parameters.

> wl wds status

```

Telnet Command: wl apcli

This command allows users to configure AP client mode for wireless connection (2.4GHz).

Syntax

```

wl apcli show
wl apcli enable [1/0]
wl apcli security [mode]
wl apcli ssid [ssid_name]
wl apcli bssid [mac address]

```

Syntax Description

Parameter	Description
<i>show</i>	Display current status of wireless AP client.
<i>enable [1/0]</i>	It means to enable wireless 2.4GHz AP client mode. 1 - enable 0 - disable
<i>security [mode]</i>	There are several modes to be selected: Disable - disable the security settings. wpa-psk [key] - WPA Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key. WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format. wpa2-psk [key] - WPA2 Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key. WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format. wpa-mix-psk [key] - WPA Mixed Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key. WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format. wep [key] [index] - WEP key will be used. You need to Enter the key string and specify the index number of the profile to be

	applied. WEP keys must be in 5/13 ASCII string or 10/26 Hexadecimal digit format.
<i>ssid [ssid_name]</i>	Specify the SSID for wireless 2.4GHz AP client.
<i>bssid</i>	Enter the MAC address for wireless 2.4GHz AP client.

Example

```
> wl apcli enable 1
Wireless AP-Clinet is enabled
> wl apcli show
% Wireless AP-Clinet is enabled
% Current SSID is test
%% Security Mode: disable
% Wireless client is disconnected
%% data rate=---, mode=---, signal=0%
```

Telnet Command: wl btnctl

This command allows you to enable or disable wireless button control.

Syntax

wl btnctl [value]

Syntax Description

Parameter	Description
<i>value</i>	0: disable 1: enable

Example

```
> wl btnctl 1
Enable wireless botton control
Current wireless botton control is on
>
```

Telnet Command: wl iwpriv

These command is reserved for RD debug. Do not use it.

Telnet Command: wl stalist

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

wl stalist

Example

```
> wl stalist
wl stalist show      : show station list
wl stalist num       : show number of stations
wl stalist neighbor  : show neighbor station list
```

Telnet Command: wl set8021x

This command allows you to configure the external or internal server used by Vigor router for wireless authentication.

Syntax

```
wl set8021x -t [0/1]
```

```
wl set8021x -v
```

Syntax Description

Parameter	Description
-t	Specify the type (external or internal) of wireless authentication server. 0 - Indicate the external RADIUS server. 1- Indicate the local 802.1x server.
-v	View the settings of 802.1x.

Example

```
> wl set8021x -t 1
% <Note> Please restart wireless after you set the parameters.
> wl set8021x -v
802.1X type is : Local 802.1X
>
```

Telnet Command: wl bndstrg

This command allows users to configure settings for Band Steering (2.4GHz).

Syntax

```
wl bndstrg show
```

```
wl bndstrg enable [1/0]
```

```
wl bndstrg chk_time [value]
```

Syntax Description

Parameter	Description
show	Display current status for Band Steering function.
enable [1/0]	It means to enable wireless 2.4GHz AP client mode. 1 - enable 0 - disable
chk_time [value]	If the wireless station does not have the capability of 5GHz network connection, the system shall wait and check for several seconds (15 seconds, in default) to make the 2.4GHz network connection. Specify the time limit for Vigor router to detect the wireless client. [value] - 1 to 60 seconds.

Example

```
> wl bndstrg show
band steering: disable
chk_time: 15 sec
> wl bndstrg chk_time 50 30
argv[0]:chk_time, argv[1]:50, argv[2]:30
```

```
%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)
```

Telnet Command: wl artfns

This command allows users to configure airtime fairness function for wireless (2.4GHz) connection.

Syntax

```
wl artfns enable [value]
```

```
wl artfns trg_num [value]
```

```
wl artfns show
```

Syntax Description

Parameter	Description
<i>enable [value]</i>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
<i>Trg_num [value]</i>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
<i>show</i>	Display current status (enable or disable) and triggering client number for airtime fairness function.

Example

```
> wl artfns enable 1
> wl artfns trg_num 3
> wl artfns show
airtime fairness: enable
trg_num: 3
>
```

Telnet Command: wl drays

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

```
wl drays set [mode] [rs_low] [rs_low_security] [delta]
```

```
wl drays restart
```

```
wl drays show
```

Syntax Description

Parameter	Description
<i>set [mode] [rs_low] [rs_low_security] [delta]</i>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86).

	delta - Set a value of Adjacent AP RSSI (1~20).
<i>restart</i>	Restart to activate roaming function.
<i>show</i>	Display current configuration of roaming function.

Example

```
> wl drayrs show
% Mode : Disable
% rs_low      : -73
% rs_low_secure : -66
% delta      : 5
>
```

Telnet Command: *wl_dual_acl*

This command allows the user to configure wireless (5GHz) access control settings.

Syntax

```
wl dual_acl enable [ssid1 ssid2 ssid3 ssid4]
wl dual_acl disable [ssid1 ssid2 ssid3 ssid4]
wl dual_acl add [MAC][ssid1 ssid2 ssid3 ssid4][isolate]
wl dual_acl del [MAC]
wl dual_acl mode [ssid1 ssid2 ssid3 ssid4] [white/black]
wl dual_acl show
wl dual_acl showmode
wl dual_acl clear
```

Syntax Description

Parameter	Description
<i>enable [ssid1 ssid2 ssid3 ssid4]</i>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable [ssid1 ssid2 ssid3 ssid4]</i>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]</i>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>isolate</i>	It means to isolate the wireless connection of the wireless client (identified with the MAC address) from LAN.
<i>del[MAC]</i>	It means to delete a MAC address entry defined in the access control list. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>mode [ssid1 ssid2 ssid3 ssid4] [white/black]</i>	It means to set white/black list for each SSID.
<i>show</i>	It means to display current status of access control.
<i>showmode</i>	It means to show the mode for each SSID.

clear

It means to clear all of the access control settings.

Example

```
> wl_dual acl showmode
SSID1: None
SSID2: None
SSID3: None
SSID4: None
> wl_dual acl add 00-50-70-ff-12-80
> wl_acl add 00-50-70-ff-12-80 ssid1 ssid2 isolate
Set Done !!
> wl_acl show
-----Enable Mac Address Filter-----
ssid1: dis  ssid2: dis  ssid3: dis  ssid4: dis
-----MAC Address Filter-----
Index  Attribute      MAC Address      Associated SSIDs
  0      s             00:50:70:ff:12:80  ssid1 ssid2

s: Isolate the station from LAN
```

Telnet Command: *wl_dual apscan*

This command is used to scan Access Point installed near the location of Vigor router.

Syntax

wl_dual apscan start

wl_dual apscan show

Syntax Description

Parameter	Description
<i>start</i>	It means to execute the AP scanning.
<i>show</i>	It means to display the content of the AP list.

Example

```
> wl_dual apscan start
> wl_dual apscan show
AP scan is ongoing.
> wl_dual apscan ?
% wl_dual apscan [start/show]
% start: do AP scan
% show: show AP list

> wl_dual apscan show
5G Access Point List :
BSSID           Channel  SSID
```

Telnet Command: wl_dual cardmac

Example

```
> wl_dual cardmac
Card MAC: 54:2a:a2:37:00:ef
```

Telnet Command: wl_dual config

This command allows users to configure general settings and security settings for wireless connection (5GHz).

```
wl_dual config enable [value]
wl_dual config enable show
wl_dual config mode [value]
wl_dual config mode show
wl_dual config channel [number]
wl_dual config channel show
wl_dual config preamble [enable]
wl_dual config preamble show
wl_dual config ssid [ssid_num enable ssid_name]
wl_dual config ssid hide [ssid_num enable]
wl_dual config ssid show
wl_dual config ratectl [ssid_num enable upload download]
wl_dual config ratectl show
wl_dual config isolate lan [ssid_num enable]
wl_dual config isolate member [ssid_num enable]
wl_dual config isolate vpn [ssid_num enable]
wl_dual config isolate show
```

Syntax Description

Parameter	Description
<i>enable[value]</i>	It means to enable/disable the 5GHz wireless function. 1: enable 0: disable
<i>show</i>	It means to display if 5G wireless function is enabled or not.
<i>mode[value]</i>	It means to select connection mode for wireless connection. Available settings are: "11a", "11n_5g", "11n" and "11an".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel [number]</i>	It means the channel of frequency of the wireless LAN. The available settings are: 36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140. number=0, means Auto number=36, means Channel 36 Number=52, means Channel 52.
<i>channel show</i>	It means to display what the current channel is.

<i>preamble [enable]</i>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. 0: disable to use long preamble. 1: enable to use long preamble.
<i>preamble show</i>	It means to display if preamble is enabled or not.
<i>ssid[ssid_num enable ssid_name]</i>	It means to set the name of the SSID, hide the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>ssid_name</i> : Give a name for the specified SSID.
<i>ssid hide [ssid_num enable]</i>	It means to hide the name of the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : Type 0 to hide the SSID or 1 to display the SSID.
<i>ssid show</i>	It means to display a table of SSID configuration.
<i>ratectl [ssid_num enable upload download]</i>	It means to set the rate control for the specified SSID. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable. <i>upload</i> : It means to configure the rate control for data upload. The unit is kbps. <i>download</i> : It means to configure the rate control for data download. The unit is kbps. (example: <code>wl dual config ratectl 1 1 25 25</code>)
<i>ratectl show</i>	It means to display the data transmission rate (upload and download) for SSID1, SSID2, SSID3 and SSID4.
<i>isolate lan [ssid_num enable]</i>	It means to isolate the wireless connection from LAN. It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable
<i>isolate member [ssid_num enable]</i>	It means to isolate the wireless connection from Member. It can make the wireless clients (stations) with the same SSID not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate vpn [ssid_num enable]</i>	It means to isolate the wireless connection from VPN. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate show</i>	It means to display the status of wireless isolation.

Example

```
> wl_dual config mode 11a
Current mode is 11a
% <Note> Please restart 5G wireless after you set the channel
> wl_dual config channel 60
Current channel is 60
% <Note> Please restart 5G wireless after you set the channel.
```

```

> wl_dual config preamble 1
Long preamble is enabled
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid 1 enable dray
SSID Enable Hide_SSID Name
1 1 0 dray
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid show
SSID Enable Hide_SSID Name
1 1 0 dray
2 0 0 DrayTek_5G_Guest
3 0 0
4 0 0

```

Telnet Command: wl_dual restart

This command allows you to restart wireless setting (5GHz).

Example

```

> wl_dual restart
5G wireless restart.....

```

Telnet Command: wl_dual security

This command allows users to configure security settings for the wireless connection (5GHz).

Syntax

`wl_dual security [SSID_NUMBER] [mode][key][index]`

`wl_dual security show`

Syntax Description

Parameter	Description
<i>Security [SSID_NUMBER] [mode][key][index]</i>	<p><i>SSID_NUMBER</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>mode</i>: Available settings are:</p> <ul style="list-style-type: none"> disable: No security. wpa1x: WPA/802.1x Only wpa21x: WPA2/802.1x Only wpamix1x: Mixed (WPA+WPA2/802.1x only) wep1x: WEP/802.1x Only wpapsk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK wep: WEP <p><i>key, index</i>: Moreover, you have to add keys for <i>wpapsk</i>, <i>wpa2psk</i>, <i>wpamixpsk</i> and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format.</p>
<i>show</i>	It means to display current mode selection for each SSID.

Example

```
> wl_dual security 1 wpa2psk 123456789e
% <Note> Please restart 5G wireless after you set the parameters.

> wl_dual security show
%% 5G Wireless LAN Security Settings:
% SSID1
%% Mode: WPA2/PSK
% SSID2
%% Mode: Disable
% SSID3
%% Mode: Disable
% SSID4
%% Mode: Disable
```

Telnet Command: `wl_dual stalist`

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

```
wl_dual stalist
```

Example

```
> wl_dual stalist
5G Wireless Station List :

Index  Status  IP Address      MAC Address      Associated with

Status Codes :
C: Connected, No encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
B: Blocked by Access Control.
N: Connecting.
F: Fail to pass WPA/PSK authentication.
```

Telnet Command: `wl_dual wds`

This command allows users to configure WDS for wireless connection (5GHz).

Syntax

```
wl_dual wds mode [value]
wl_dual wds security [value]
wl_dual wds ap [value]
wl_dual wds hello [value]
wl_dual wds status
wl_dual wds show
wl_dual wds mac add [index addr]
```

wl_dual wds mac clear/disable/enable [index/all]

wl_dual wds flush

Syntax Description

Parameter	Description
mode [value]	It means to specify connection mode for WDS. [value]: Available settings are : d: Disable b: Bridge r: Repeater
security [value]	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK wpa2psk [key]: WPA2/PSK <i>key</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. e.g., wl_dual wds security disable wl_dual wds security wep 12345 wl_dual wds security wpa2psk 12345678
ap [value]	It means to enable or disable the AP function. Value: 1 - enable the function. 0 - disable the function.
hello [value]	It means to send hello message to remote end (peer). Value: 1 - enable the function. 0 - disable the function.
status	It means to display WDS link status for 5GHz connection.
show	It means to display current WDS settings.
mac add [index addr]	add [index addr] - Add the peer MAC entry in Repeater/Bridge WDS MAC table.
mac clear/disable/enable [index/all]	clear/disable/enable [index/all]- Clear, disable, enable the specified or all MAC entries in Repeater/Bridge WDS MAC table. e.g., wl_dual wds mac enable 1
flush	It means to reset all WDS setting.

Example

```
> wl_dual wds status
Please enable WDS hello function first.

> wl_dual wds hello 1
% <Note> Please restart router after you set the parameters.
> wl dual wds mode b
> wl dual wds security wep
>
>
```

```

> wl_dual wds show
5G Wireless WDS Setting

Mode : Bridge
Security : WEP
AP Function : Enable
Send Hello Function : Enable

Bridge :
Index  Enable  MAC Address
  1      0    00:00:00:00:00:00
  2      0    00:00:00:00:00:00
  3      0    00:00:00:00:00:00
  4      0    00:00:00:00:00:00

Repeater :
Index  Enable  MAC Address
  5      0    00:00:00:00:00:00
  6      0    00:00:00:00:00:00
  7      0    00:00:00:00:00:00
  8      0    00:00:00:00:00:00
> wl_dual wds wep 12345
% <Note> Please restart router after you set the parameters.

```

Telnet Command: wl_dual wps

This command allows users to configure WPS for wireless connection (5GHz).

Syntax

`wl_dual wps enable [value]`

`wl_dual wps pbc`

`wl_dual wps pin [code]`

`wl_dual wps show`

Syntax Description

Parameter	Description
<i>enable [value]</i>	It means to enable WPS. 1 - enable 0 - disable
<i>pbc</i>	It means to start WPS by pressing the WLAN ON/OFF WPS button on Vigor router.
<i>pin [code]</i>	It means to start WPS by using client PIN code. [code]: Client PIN code (digit number).
<i>show</i>	It means to display current WPS settings.

Example

```

> wl_dual wps enable 1
WPS is enabled.
> wl_dual wps pin 88563337
WPS has triggered by PIN code.
The AP will wait for WPS request from your client for 2 minutes...

```

Telnet Command: wl_dual set8021x

This command allows you to configure the external or internal server used by Vigor router for wireless authentication (5GHz).

Syntax

```
wl_dual set8021x -t [0/1]
```

```
wl_dual set8021x -v
```

Syntax Description

Parameter	Description
-t	Specify the type (external or internal) of wireless authentication server. 0 - Indicate the external RADIUS server. 1- Indicate the local 802.1x server.
-v	View the settings of 802.1x.

Example

```
> wl_dual set8021x -t 1
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual set8021x -v
802.1X type is : Local 802.1X
>
```

Telnet Command: wl_dual apcli

This command allows users to configure AP client mode for wireless connection (5GHz).

Syntax

```
wl_dual apcli show
```

```
wl_dual apcli enable [value]
```

```
wl_dual apcli security [mode]
```

```
wl_dual apcli ssid [ssid_name]
```

```
wl_dual apcli bssid
```

Syntax Description

Parameter	Description
show	Display current status of wireless AP client.
enable [value]	It means to enable wireless 5GHz AP client mode. 1 - enable 0 - disable
Security [mode]	There are several modes to be selected: Disable - disable the security settings. wpapsk [key] - WPA Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key. WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format. wpa2psk [key] - WPA2 Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key.

	<p>WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format.</p> <p>wpamixpsk [key] - WPA Mixed Pre-shared Key will be used. Keys must start with 0x to be identified as a Hexadecimal number key. WPA keys must be in 8-63 ASCII string or 64 Hexadecimal digit format.</p> <p>wep [key] [index] - WEP key will be used. You need to Enter the key string and specify the index number of the profile to be applied.</p> <p>WEP keys must be in 5/13 ASCII string or 10/26 Hexadecimal digit format.</p>
<i>ssid [ssid_name]</i>	Specify the SSID for wireless 5GHz AP client.
<i>bssid</i>	Enter the MAC address for wireless 5GHz AP client.

Example

```

> wl_dual apcli enable 1
Wireless 5G AP-Clinet is enabled
Vigor> wl_dual apcli show
% Wireless 5G AP-Clinet is enabled
% Current SSID is
%% Security Mode: disable
% Wireless 5G client is disconnected
%% data rate=---, mode=---, signal=0%
> wl_dual apcli ssid Carrie
% <Note> Please restart wireless 5g after you set the parameters.
Current SSID is Carrie

```

Telnet Command: wl_dual artfns

This command allows users to configure airtime fairness function for wireless (5GHz) connection.

Syntax

`wl_dual artfns enable [value]`

`wl_dual artfns trg_num [value]`

`wl_dual artfns show`

`wl_dual artfns status`

Syntax Description

Parameter	Description
<i>enable [value]</i>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
<i>Trg_num [value]</i>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
<i>show</i>	Display current status (enable or disable) and triggering client number for airtime fairness function.
<i>status</i>	Display whether the function of airtime fairness is enabled or disabled.

Example

```

> wl_dual artfns show
airtime fairness for 5G: disable
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!

> wl_dual artfns enable 0
> wl_dual artfns trg_num 2
> wl_dual artfns show
airtime fairness for 5G: disable
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!

```

Telnet Command: `wl_dual drays`

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

`wl_dual drays set [mode] [rs_low] [rs_low_security] [delta]`

`wl_dual drays restart`

`wl_dual drays show`

Syntax Description

Parameter	Description
<code>set [mode] [rs_low] [rs_low_security] [delta]</code>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86). delta - Set a value of Adjacent AP RSSI (1-20).
<code>restart</code>	Restart to activate roaming function.
<code>show</code>	Display current configuration of roaming function.

Example

```

> wl_dual drays show
% Mode : Disable
% rs_low      : -73
% rs_low_secure : -66
% delta      : 5
> wl_dual drays set 1 68 66 2
> wl_dual drays show
% Mode : Strictly Minimum RSSI
% rs_low      : -68
% rs_low_secure : -66
% delta      : 2

```

Telnet Command: radius

This command allows you to configure detailed settings for RADIUS server

Syntax

radius enable [0/1]

radius authport [port number]

radius set_auth_method [method idx]

radius client [add] [idx] -i [address] -m [mask] -p [prefix] -l [length] -s [secret]

radius client [del] [idx]

radius show

radius set_dot1x_phase1 -e [method_idx]

radius set_dot1x_phase1 -d [method_idx]

radius set_dot1x_phase2 -e [method_idx]

radius set_dot1x_phase2 -d [method_idx]

Syntax Description

Parameter	Description
<i>enable</i> [0/1]	Enable (1) or disable (0) the RADIUS server.
<i>authport</i> [port number]	Configure the port number for authentication. Port number: Available range is from 0 to 65535. Default value is "1812".
<i>set_auth_method</i> [method idx]	Specify which method will be used for authentication. Method idx: "0" is "Only PAP"; "1" is "PAP/CHAP/MS-CHAP/MS-CHAPv2".
<i>client add</i>	Specify a client to be authenticated by RADIUS server by typing required information as follows: -i [address]: client IPv4 address(domain) -m [mask]: client IPv4 mask -p [prefix]: client IPv6 prefix -l [length]: client IPv6 prefix length -s [secret]: shared secret ex: radius client add 1 -i 192.168.1.1 -m 255.255.255.0 -s 123
<i>client [del] [idx]</i>	<i>del</i> - Delete related settings for selected client. <i>idx</i> - Specify the index number of client profiles.
<i>show</i>	Display the status of RADIUS server.
<i>enable_dot1x</i> [0/1]	Enable (1) or disable (0) the 802.1X Authentication function of RADIUS Server. Default is disabled.
<i>set_dot1x_phase1</i> [method_idx]	Set the phase1 method for 802.1X authentication of RADIUS server. <i>method_idx</i> - Specify which method will be used. At present, dot1x_phase1 can only support PEAP now. So only "1" can be used for it.
<i>set_dot1x_phase2</i> [method_idx]	Set the phase2 method for 802.1X authentication of RADIUS server. <i>method_idx</i> - Specify which method will be used. Dot1x_phase2 can only support MS-CHAPv2 now. So only "1" can be used for it.
<i>-e</i>	Set method for dot1x_phase1 or dot1x_phase2.

<code>-d</code>	Delete method for dot1x_phase1 or dot1x_phase2.
-----------------	---

Example

```
> radius client add 1 -i 192.168.1.1 -m 255.255.255.0 -s 123
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: local_8021x

The command is used to configure general settings for Local 802.1X server built in Vigor router.

Syntax

```
local_8021x enable [0/1]
local_8021x set_localdot1x_phase1 options...
local_8021x set_localdot1x_phase2 options...
local_8021x show
```

Syntax Description

Parameter	Description
<code>enable</code>	Enable or disable the configuration. 0: disable. 1: enable.
<code>set_localdot1x_phase1</code>	Only support PEAP now. The method_idx for such phase1 is "1".
<code>set_localdot1x_phase2</code>	Only support MS-CHAPv2 now. The method_idx for such phase2 is "1".
<code>options</code>	-e [method_idx]: set method. e.g, local_8021x set_localdot1x_phase1 -e 1 -d: delete mehod. e.g, local_8021x set_localdot1x_phase1 -d
<code>show</code>	Display current settings of local 802.1x server.

Example

```
> local_8021x show
% Local 802.1X enable: enable
% phase1 support method: [PEAP]
% phase2 support method: [None]
```

Telnet Command: wol

This command allows Administrator to set the white list of WAN IP addresses/Subnets, that the magic packet from these IP addresses/Subnets will be eligible to pass through NAT and wake up the LAN client. You also need to set NAT rule for LAN client.

Syntax

```
wol up [MAC Address]/[IP Address]
```

```
wol fromWan [on/off/any]
```

```
wol fromWan_Setting [idx][ip address][mask]
```

Syntax Description

Parameter	Description
<i>MAC Address</i>	It means the MAC address of the host.
<i>IP address</i>	It means the LAN IP address of the host. If you want to wake up LAN host by using IP address, be sure that that IP address has been bound with the MAC address (IP BindMAC).
<i>on/off/any</i>	It means to enable or disable the function of WOL from WAN. on: enable off: disable any: It means any source IP address can pass through NAT and wake up the LAN client. This command will allow the user to choose whether WoL packets can be passed from the Internet to the LAN network from a specific WAN interface.
<i>[idx][ip address] [mask]</i>	It means the index number (from 1 to 4). These commands will allow the user to configure the LAN clients that the user may wake up from the Internet through the use of the WoL packet. <i>ip address</i> - It means the WAN IP address. <i>mask</i> - It means the mask of the IP address.

Example

```
> wol fromWan on
> wol fromWan_Setting 1 192.168.1.45 255.255.255.0
>
```

Telnet Command: user

The command is used to create new user account profiles.

Syntax

sser set [-e/-d/-c/-l/-o/-a/-r/-b]

user edit [PROFILE_IDX] [-e/-d/-n/-p/-t/-u/-i/-q/-r/-w/-s/-m/-x/-v]

user account [USER_NAME] [-t/-d/-q/-r/-w]

Syntax Description

Parameter	Description
<i>set</i>	It means to configure general setup for the user management.
<i>edit</i>	It means to modify the selected user profile.
<i>account</i>	It means to set time and data quota for specified user account.
User Set	
<i>-e</i>	Enable User management function.
<i>-d</i>	Disable User management function.
<i>-a</i> [Profile idx][User name][IP_Address]	It means to pass an IP Address. <i>Profile idx</i> - Enter the index number of the selected profile. <i>User name</i> - Enter the user name that you want it to pass. <i>IP_Address</i> - Enter the IP address that you want it to pass.
<i>-l all</i> <i>-l userl</i> <i>-l ip</i>	Show online user. <i>all</i> - all of the users will be displayed on the screen. <i>user name</i> - Enter the user name that you want to view on the screen. <i>ip</i> - Enter the IP address that you want to view on the screen.
<i>-o</i>	It means to show user account information. e.g., <i>-o</i>
<i>-c</i> [user name] <i>-c all</i>	Clear the user record. <i>user name</i> - Enter the user name that you want to get clear corresponding record. <i>all</i> - all of the records will be removed.
<i>-buser</i> [user name] <i>-b ip</i> [ip address]	Block specifies user or IP address. <i>user name</i> - Enter the user name that you want to block. <i>ip address</i> -- Enter the IP address that you want to block.
<i>-u user</i> [user name] <i>-u ip</i> [ip address]	Unblock specifies user or IP address. <i>user name</i> - Enter the user name that you want to unblock. <i>ip address</i> -- Enter the IP address that you want to unblock.
<i>-r</i> [user name all]	Remove the user record. <i>user name</i> - Enter the name of the user profile. <i>all</i> - all of the user profile settings will be removed.
<i>-q</i>	It means to trigger the alert tool to do authentication.
<i>-s</i>	It means to set login service. 0:HTTPS 1:HTTP e.g., <i>-s 1</i>
User edit	

<i>PROFILE_IDX</i>	Enter the index number of the profile that you want to edit.
<i>-e</i>	Enable User profile function.
<i>-d</i>	Disable User profile function.
<i>-n</i>	It means to set a user name for a profile. e.g., <i>-n forttest</i>
<i>-p</i>	It means to configure user password. e.g., <i>-p 60forttest</i>
<i>-t</i>	It means to enable /disable time quota limitation for user profile 0:Disable 1:Enable
<i>-u</i>	It means to enable /disable data quota limitation for user profile 0:Disable 1:Enable
<i>-i</i>	It means to set idle time. e.g., <i>-i 60</i>
<i>-q</i>	set time quota It means to set time quota of the user profile. e.g., <i>-q 200</i>
<i>-r</i>	It means to set data quota. e.g., <i>-r 1000</i>
<i>-w</i>	It means to specify the data quota unit (MB/GB). e.g., <i>-w MB</i>
<i>-s</i>	It means to set schedule index. Available settings are" sch_idx1,sch_idx2,sch_idx3, and sch_idx4.
<i>-m</i>	It means to set the maximum login user number. e.g., <i>-m 200</i>
<i>-x</i>	It means to set external server authentication 0: None 1: LDAP 2: Radius 3: TACAS e.g., <i>-x 2</i>
<i>-v</i>	It means to view user profile(s).
User account	
<i>USER_NAME</i>	It means to type a name of the user account.
<i>-d</i>	It means to enable /disable data quota limitation for user account. 0:Disable 1:Enable
<i>-q</i>	It means to set account time quota. e.g., <i>-q 200</i>
<i>-r</i>	It means to set account data quota. e.g., <i>-r 1000</i>
<i>-t</i>	It means to enable /disable time quota limitation for user account. 0:Disable 1:Enable
<i>-w</i>	It means to set data quota unit (MB/GB).

Example

```
> user account admin -d 1
Enable the [admin] data quota limited
```

Telnet Command: appqos

The command is used to configure QoS for APP.

Syntax

appqos view

appqos enable [0/1]

appqos traceable [-v | -e AP_INDEX CLASS | -d AP_INDEX]

appqos untraceable [-v | -e AP_INDEX CLASS | -d AP_INDEX]

Syntax Description

Parameter	Description
<i>view</i>	It means to display current status of APP QoS.
<i>enable[0/1]</i>	It means to enable or disable the function of APP QoS.
<i>traceable/ untraceable</i>	The APPs are divided into traceable and untraceable based on their properties.
<i>-v</i>	It means to view the content of all traceable APs. Use "appqos traceable -v" to display all of the traceable APS with speficed index number. Use "appqos untraceable -v" to display all of the untraceable APS with speficed index number.
<i>-e</i>	It menas to enable QoS for application(s) and assign QoS class.
<i>AP_INDEX</i>	Each index number represents one application. Index number: 50, 51, 52, 53, 54, 58, 60, 62, 63, 64, 65, 66, 68 are used for 13 traceabel APPs. Index number: 0-49, 55-59, 61, 67, 69, and 70-123 are used for 125 untraceable AP.
<i>CLASS</i>	Specifies the QoS class of the application, from 1 to 4 1:Class 1, 2:Class 2, 3:Class 3, 4:Other Class
<i>-d</i>	It means to disable QoS for application(s).

Example

```
> appqos enable 1

APP QoS set to Enable.
> appqos traceable -e 68 2

TELNET: ENABLED, QoS Class 2.
```
