Managing patient data and protecting their privacy is crucial. HP Thin Clients are trusted by healthcare institutions around the world to help them support strict data privacy standards, deliver reliability in a variety of environments, and streamline IT.

Keep your patient data safe and centrally secured

Help protect confidential patient information and allow safe access to it from distributed deployments with HP Thin Clients. Data is stored away from the device, and you can add another layer of user security with support for single sign-on solutions.¹

Designed for your healthcare deployments

From reception areas to medical carts, our desktop designs can be mounted horizontally or vertically, and our mobile devices go with you. The t640 Thin Client, certified to meet EN/IEC 60601-1-2 technical standards for safety near patients and medical devices.

Worry-free IT

Ensure your team focuses what really matters with HP Thin Clients that require minimal updates and have low failure rates. Deploy easily with remote, centralized management through the included HP Device Manager software console.
Versatility for all healthcare needs

Discover the versatility that HP Thin Clients offer healthcare institutions across workplaces, workstyles, and workforces.

1. Single sign-on software sold separately and requires optional FIPS 201-compliant fingerprint reader or dual-band RFID reader.
2. Only the HP t630 Thin Client and HP t640 Thin Client are certified.
3. Specific to the HP mt45 Mobile Thin Client.
