

Konftel Video Collaboration

Great value packages for hassle-free
video conferencing in any type of meeting room

KONFTEL VIDEO COLLABORATION

Three things you can always count on

CRYSTAL CLEAR WITH OMNISOUND®

Users can sit back and relax, joining in the conversation, hearing and being heard effortlessly. Konftel's OmniSound® audio technology with full duplex guarantees powerful and crystal clear sound in both directions.

NO HASSLE GUARANTEE

A single USB cable is all you need to connect the camera, the sound device and the room's screen to the collaboration app on your laptop. The Konftel OCC Hub brings everything together into one convenient package. Find out more about how it works on the next page.

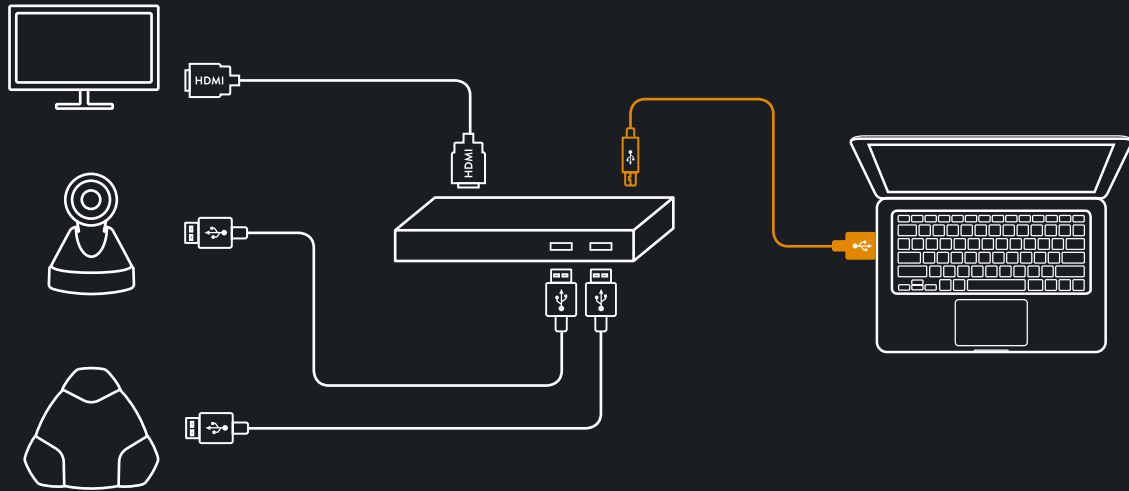

IMPRESSIVE VIDEO QUALITY

Konftel's USB conference cams deliver stunning image quality in your video conference. Small huddle rooms need a wide field of view and 4K resolution. For medium and large meeting rooms, the optimum choice is a PTZ camera with optical zoom. Whichever camera you choose, you'll always get it at a fraction of what comparable conference cams cost.

KONFTEL ONE CABLE CONNECTION HUB

How it works

It's as simple as it is ingenious, wouldn't you say? This is how the components of the video packages fit together, with the Konftel OCC Hub making the solution a breeze to set up and use. As the name suggest, the Konftel OCC Hub sits at the heart of the video collaboration solution, offering One Cable Connection to the conference camera, speakerphone and screen.

In practice, this means that our packages fully support BYOC – Bring Your Own Computer, where the user can bring the collaboration service to the meeting room on any laptop with a USB port. It's Plug & Play via the USB connection and requires no extra drivers as long as you have a modern version of Windows as the operating system* on your computer.

** The Konftel OCC Hub uses DisplayLink, the driver for which is already on your computer if you have Windows 10 (1607) Anniversary Update or later. Drivers for other operating systems can be found at konftel.com/occ*

BRING YOUR OWN MEETING

It doesn't matter what your cloud service or collaboration app of choice is: Skype, Teams, Zoom, Webex, Lifesize, Blue-Jeans, Circuit, GoToMeeting or some other option. Bring your meeting with you on your laptop, plug it in and you're good to go.

THE SENSE OF PRESENCE

Video solutions for all sizes of meeting

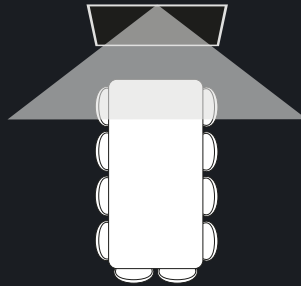

We have a wide range of video packages to suit all sorts of meeting sizes and scenarios. Whether you're operating from a small huddle room or a large boardroom, you can be sure that the package you choose is optimized for excellent sound and images in that specific situation. The simplicity of the hub and Konftel's One Cable Connection comes as standard.

**SMALL**

Up to 6 people

In small meeting rooms, you need to be able to position the camera close to the table. Here it's important to have a wide field of view that captures all the meeting participants in a natural way, without them having to lean into shot. Our huddle room package includes a 4K camera with a 123° field of view, while WDR technology delivers a balanced image whatever the light conditions.

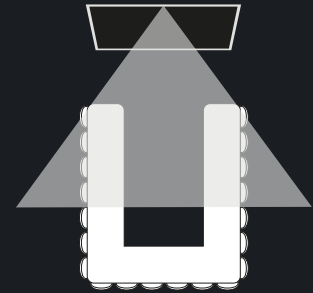

The package also comes with the brilliant Konftel Ego speakerphone, for a crystal clear audio experience at both ends of the conversation.

**MEDIUM**

Up to 12 people

The conference cam with 4K resolution and digital PTZ (Pan-Tilt-Zoom) performs beautifully even in a medium-sized meeting room. With an incredibly detailed picture, you can zoom in for optimum coverage of the participants without any loss of perceived video quality.

A larger room brings a need for a more powerful speakerphone. Our medium package includes a model from the Konftel 55 series, which has the capacity to capture what everyone says in the room and reproduce the dialog with clarity and precision.

**MEDIUM-LARGE**

Up to 20 people

Large conference rooms need a proper PTZ camera with optical zoom and a tighter field of view to create the right sense of presence. In some cases, it can also be a great choice for a medium-sized room. The camera can be placed at a distance from the meeting participants without them looking like they're sitting miles away. Zoom in on the face of the person presenting or highlight the details of a product sample with impressive sharpness and clarity.

In this context, you need a speakerphone with expansion microphones to extend the effective audio pick-up range. Most of the large packages also offer hybrid conferencing, allowing you to combine web meetings with regular phone calls.
