Brief

HP Wireless Hotspot

Convert your PC into a personal wireless hotspot

Make your workgroup more productive by turning your HP PC into a personal wireless hotspot. HP Wireless Hotspot[1] allows you to share your internet connection and network bandwidth so everyone on your team gets more done. All 2013 notebooks, tablets and desktops with Windows 8 comes preloaded with HP Wireless Hotspot.

This HP application saves you money with no need to purchase a separate router.

- Easily set up a shared internet connection from your computer
- Up to five additional connections at one time
- Shared connection extends the utility and productivity of fee-based wireless broadband
- One location to quickly share, check status, and disconnect shared connections

How to get started

- Launch HP Wireless Hotspot application
- Name your network
- Set a password
- Enable sharing

[1] Requires active internet connection and separately purchased data plan. While HP Wireless Hotspot is active, on-device applications will continue to work and will use the same data plan as the HP Wireless Hotspot. Requires a Wi-Fi module. Wireless Hotspot data usage may incur additional charges. Check with your plan for details. Requires Windows 8 and wireless card.

HP Wireless Hotspot User Scenarios

Scenario 1

SMB

> **Business Owner**

The owner of a small business or satellite office uses a HP all-in-one (AiO) connected to the internet as its main computer.

Wireless Hotspot

HP Wireless Hotspot on a HP AiO replaces the cost and complexity of setting up a wireless router by allowing up to 5 additional wireless devices to connect to the internet via a shared Wi-Fi connection.

Five team members easily connect to the internet via the HP Wireless Hotspot.

The entire office remains productive and stays on budget (saves the cost of a separate router).
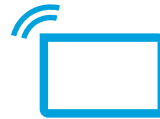

Scenario 2

Airport Terminal Wi-Fi

A mobile team traveling to a customer meeting has one of their portable devices loaded with a WWAN card.

Wireless Hotspot

A HP PC with HP Wireless Hotspot and Mobile Broadband gives your team wireless access for all devices at a fraction of the cost at airports or conference centers.

Five team members can use a shared connection rather than pay for Wi-Fi individually.

Your team remains productive while on the road without breaking the bank.
