

ServSwitch™ Agility

Go farther, do more with digital
KVM Extension and Switching over IP.

- » Single or Dual Link DVI, Audio, USB and serial.
- » Flexible Architecture:
 - KVM Point-to-Point Extension
 - Single Target Sharing
 - Multicasting
 - KVM Matrix Switching

ServSwitch Agility

Go farther, do more with digital KVM extension and switching over IP

ServSwitch Agility Single Link DVI Transmitter (ACR1000A-T)

- New flexible topology for KVM Extension and KVM Switching.
- Delivers perfect digital video: Agility SL: DVI up to 1920 x 1200, Agility DL: up to 2560 x 1600
- No-loss compression minimises bandwidth use while maximising the user experience.
- Optimised extreme fast switching (< 1 second).
- Configure your network to suit your needs: Point-to-Point extension, KVM Switching, Single-target sharing, or multicasting.
- Allows selective switching of the DVI, USB, audio, and RS-232 channels.
- Features keyboard/mouse emulation, and virtual transparency for other standard Human Interface Devices, such as touch screens or flash drives.
- Distance is only limited within your LAN/CAN network.
- Mounting options include rackmounting, desktop, and wallmounting.
- Fanless design ensures silent operation .

ServSwitch Agility™ with DVI, USB, Audio, and RS-232 over IP enables you to do more and go farther with perfect digital video over nearly unlimited distances.

Choose between the ServSwitch Agility (ACR1000A) with one single link DVI-D video channel and the Agility DL (ACR1002) with two single link channels or one dual link DVI video channel for computers with two digital video outputs. The ServSwitch Agility DL features besides the RJ-45 CATx link connection also a SFP slot that allows you to establish an inexpensive and fast point-to-point extension over fibre.

The flexible topology of the Agility gives you application options that are brand new for KVM devices. The Agility can be a KVM Extender, a KVM switch, or a sharing portal. It's up to your application how you decide to configure it.

Switching Network

Turn your network into a KVM switch with the Agility. Create a KVM switching system with as many users as you want — just keep adding receivers for every user console. With mixed channels combine digital video, audio, USB devices and serial data from different computers. When you change channels on the receiver unit, you switch DVI, audio, and USB to another source, while the transmitters not in use continue to emulate the previously attached console.

Single Target Sharing & Pooling

In this configuration, multiple users can share a single remote computer. Users can connect in three ways: View-only shows only the video feed. In Share Mode, an open connection is available for all users to use the connected devices at the same time. In Exclusive Mode, one user locks out the other users, preventing them from viewing or sharing the connection, with the exception of network administrators.

Multicasting

This unique feature enables the Agility to reflect video and audio from a single computer over an IP network to several receiving units.

To prevent saturating the network, an installed network switch should feature Internet Group Management Protocol (IGMP) snooping. This prevents an IP switch from passing on multicast data onto ports being not part of the Agility system.

Multicast content can be sent to as many receivers as you want with no distance limits within the network. This is an ideal configuration for digital signage applications.

Point-to-Point

In the most straightforward configuration, use the Agility as a point-to-point KVM Extender. Use CAT6 cable to connect a transmitter and a receiver to deliver

ServSwitch Agility Dual Link DVI Transmitter front and rear view (ACR1002A-T)

perfect DVI video, audio in CD quality, and USB over distances up to 100 metres.

If you need cable runs longer than 100 m (328 feet), add another standard Ethernet switch every 100 metres. You can add as many switches as distance is required. Alternatively larger distances can be realised over fibre optic connections using an additional Media Converter with the Agility SL or a MiniGBIC with the Agility DL.

You may even configure this setup to go to multiple screens at one time or add new Agility units for additional functionality.

Multihead Graphics and Control Desk Operation

Control Room setups and similar applications require multiple graphic heads to be switched simultaneously. The Agility allows you to synchronously switch channels that are consisting of multiple video signals from either a single source computer or even multiple computers easily.

The selective channel configuration offers trading switch capabilities from only one single keyboard and mouse at a control desk monitoring various video signals from many sources.

Connection Reliability

ServSwitch Agility is perfectly designed for mission critical environments.

In a Point-to-point connection, the link between transmitter and receiver will automatically re-establish again after a network

disconnect or power shortage.

In a matrix setup with iPath Controller the function is similar! Even if the iPath Controller is unavailable the previous link will be re-established after any kind of link loss and return.

Management system: iPATH

The ServSwitch Agility Controller Unit offers a management suite enabling you to remotely and securely configure all the transmitter and receiver units. Use the Agility Controller to define new content channels, restrict and enable access privileges, disable specific USB device classes, and so on whenever you decide to configure a ServSwitch Agility switching system (ACR1000A-CTL is not needed for point to point extensions).

The iPATH™ system is a single box that plugs right into your network. Once plugged in, system administrators can begin configuring devices, users, and channels using a standard web browser. The iPATH interface features a useful on-screen dashboard that gives you a current overview of the system. It is continually refreshed so you always have the most up-to-date system information. The configuration of the various channels becomes a piece of cake.

ServSwitch Agility Controller rear view (ACR1000A-CTL)

Application Examples

Point-to-Point KVM Extension over CATx

Point-to-Point KVM Extension over Fibre optic

Single Target Sharing / Pooling

Multicasting

KVM Switching

Control Rooms

In command and control room setups, multicast video and data to receiver units between LCD display walls. Users can interact with any of the computers using separate keyboard, mice, and DVI displays.

Broadcasting

Media post-production suites become collaborative with the Agility. Machine rooms store the media assets and hardware, and can distribute them throughout a post-production facility. Editors, producers, and directors can instantly communicate with animators and colorists.

Healthcare

Distribute high-quality medical images to doctors and staff across large medical facilities. Agility uses standard Ethernet equipment, so the net-working hardware won't need to be updated.

Digital Signage

Deliver rich media experiences in public spaces, such as museums or libraries. The flexibility of the system makes reconfiguring your implementation a snap.

Get real flexibility for your digital signage network. All you need is an IP network running through the installation, and you can easily deliver content from one playout device via DVI. The number of screens is up to you. Or, use the Agility to switch between multiple video sources.

Agility Solution Healthcare

A large medical centre had an urgent need for its surgeons and practitioners to be able to view high resolution images of x-rays, photographs and medical charts from its servers — as well as conforming to patient confidentiality and data protection laws — whilst still maintaining a completely sterile environment. Power supply fans inside PCs or Servers suck in air to cool down the processor, which means they are unsuitable for such an environment as germs and dust can easily gather. Cleaning them is also not practical as joints, holes and openings are common.

Black Box provided the solution by enabling the servers to be placed down the corridor in a secure environment, and using a ServSwitch Agility to extend the keyboard, monitor and mouse into operating theatres, x-ray and consulting rooms. Cleaning was now not an issue as the keyboards, displays and mice were of a medical standard ensuring they could be disinfected directly.

Agility Solution Broadcasting

A large TV Broadcaster was looking for a switching solution to optimise his playout process. All source computers are housed in a central computer room. 50 users (directors and assistants) in multiple control rooms should be able to access about 80 computers. Special attention had to be put on very fast switching between the computers. For the highly concentrated work, the solution should also work very quietly.

The customer chose the ServSwitch Agility due to its outstanding fast switching times. Using a TCP/IP network the Agility units connect the users within the various control rooms to the remote computers without any loss in video quality. The Agility receivers in the control rooms operate very quietly without a fan. The Agility system can flexibly be adapted to future changes. The customer was particularly pleased as the Agility system turned out to be a very cost effective solution in comparison to other systems.

Agility Solution Video Distribution

A well-known advertising agency required a method of moving live video from a server in a data cupboard, up to a 103" screen in a large train station. The screen resolution was full high definition (1920 x 1080p) and the videos displayed were advertisements that needed to be displayed clearly and concisely, and without interference.

The Black Box Agility was chosen as the reliable method for transporting high resolution video across the train station, to the large screen. The Agility introduced no loss and transported the original video faithfully. Even on the large display, there were no signs of artefacts or anomalies.

Agility Solution Court Rooms

A court in West Palm Beach was looking for a control solution for its court session recording system. Data from five court houses within a 36 km radius needed to be documented and recorded on DVR systems mounted in several cabinets within the control room.

The court chose the Agility system to connect the remote court rooms to the central recording system. In total 45 Agility transmitters send video, audio and microphone signals back to the control room. Ten supervisors got Agility receivers being fed into a ServSwitch 4Site and ServSwitch Freedom. This equipment assures not only a detailed documentation of the court sessions, each supervisor now easily navigates each incoming audio and video feed by moving his mouse around and he can hear the audio from the currently selected channel.

TECH SPECS

Connectors — ACR1000A-T and ACR1002A-T:
 Video: (1) DVI-D F; ACR1002A-T: (2);
 Audio: (2) 3.5 mm Audio jacks, input and output;
 USB peripherals: (1) USB Type B F;
 Serial: (1) RS232 DB9 M AUX port;
 Power: (1) 2.5 mm DC jack;
 Network: (1) RJ45, 1 Gigabit network connection (CAT6 ideal);
 ACR1002A-T also: (1) SFP Slot 1.25 Gbps

Connectors — ACR1000A-R and ACR1002A-R:
 Video: (1) DVI-D F; ACR1002A-R: (2)
 Audio: (2) 3.5mm Audio jacks, line/mikro in, line out;
 USB Peripherals: (4) USB Type A F;
 Serial: (1) RS232 DB9 M AUX port;
 Power: (1) 2.5 mm DC jack;
 Network: (1) RJ45, 1 Gigabit network connection;
 ACR1002A-R also: (1) SFP Slot 1,25 Gbps

Hardware Compatibility — All computers with DVI (digital only), USB, and Audio; Network Switches: IGMP Function recommended

Dimensions — Each unit: 4.4H x 20.1W x 12.2D cm

Weight — each unit: 0.75 kg

What's included

Agility Transmitter

- ServSwitch Agility Transmitter
- (1) Power supply with cord, 1.8m
- (1) or (2) Combo USB/DVI-D cable(s), 1.4m
- (2) Audio cables 3.5mm M, 3m
- (4) Self-adhesive rubber feet
- CD-ROM with Manual and Quick Starter

Agility Receiver

- ServSwitch Agility Receiver
- (1) Power supply with cord, 1.8m
- (4) Self-adhesive rubber feet
- CD-ROM with Manual and Quick Starter

What's included

Agility Kit

- ServSwitch Agility Transmitter
- ServSwitch Agility Receiver
- (2) Power supplies with cord, 1.8m
- (1) or (2) Combo USB/DVI-D cable(s), 1.4m
- (2) Audio cables 3.5mm M, 3m
- (1) Serial Nullmodem cable, F/F, 1.65m (Upgrade)
- (8) Self-adhesive rubber feet
- CD-ROM with Manual and Quick Starter

Agility Controller

- ServSwitch Agility Controller Unit
- (1) Power adapter
- Rackmount bracket

Item	Code
ServSwitch Agility, Single Link DVI	
Kit with Transmitter and Receiver	ACR1000A
Transmitter only	ACR1000A-T
Receiver only	ACR1000A-R
ServSwitch Agility, Dual Link DVI	
Kit with Transmitter and Receiver	ACR1002A
Transmitter only	ACR1002A-T
Receiver only	ACR1002A-R
ServSwitch Agility Controller Unit iPATH	ACR1000A-CTL
Accessories	
19" Rackmountkit for one transmitter and receiver unit	RMK2004
19" Rackmountkit for two transmitter and receiver units (1U)	RMK2004-2
VESA Mountingkit	RMKVESA
