

PDU30MT16FNET Monitored PDU

Designed for datacenters and other electrically demanding applications.

The CyberPower (PDU30MT16FNET) 16-outlet 2U rack mount monitored power distribution unit (PDU) provides 120V 30A output. It distributes power to 16 NEMA 5-20R receptacles from a single twist lock NEMA L5-30P plug, with unfiltered electrical pass-through. Power status can be monitored over the network, using CyberPower Management Console and the RJ45 Ethernet port for network connection, or locally using the LCD.

The front LCD panel provides local monitoring of the PDU. Load management is accomplished by using the display to measure the electrical current used by connected equipment in amps. The LCD can also display input voltages to assist in diagnosing potential issues with input power. Power being consumed in watts can also be displayed, as well as, the IP address of the network interface for ease of installation.

A Three-Year Warranty ensures that this PDU is free of defects in design, assembly, material and workmanship.
