<sup>1</sup> All battery life claims are approximate and based on a standard mixed use profile. The mixed use profile is based on Motorola devices on major 4G LTE networks with excellent coverage and includes both usage and standby time. Out-of-box settings are applied to the mixed use profile to project battery performance. Actual battery performance will vary and depends on many factors including signal strength, network configuration, age of battery, operating temperature, features selected, device settings, and voice, data, and other application usage patterns.

<sup>2</sup> Battery must be substantially depleted; charging rate slows as charging progresses or phone temperature increases.
