# WatchGuard<sup>®</sup> XCS Solutions

### Ensure the safety and privacy of inbound and outbound network traffic

### SPAM PROTECTION

- Reputation Enabled Defense, a key "in the cloud" component of XCS, blocks up to 98% of unwanted email at the perimeter, dramatically optimizing bandwidth and preventing threats from entering your network.
- Anti-spam engine examines sender information and content, including images, attachments, and embedded URLs. It automatically conducts contextual analysis of message traffic for a categorized and weighted score, resulting in highly intelligent protection.
- Quarantine for spam and suspect emails directs unwanted spam to a local guarantine server, allowing end users to manage their quarantined messages, safe lists, and block lists from an easy-to-use, webbased interface products.

### VIRUS, SPYWARE, AND MALWARE PROTECTION

- Zero-hour threat outbreak response closes the window of vulnerability between when an attack launches and when scanning filter updates are developed and distributed.
- Advanced content and malware detection with sandboxed emulations scans inbound and outbound email for malicious content delivered by blended threats.

#### DATA LOSS PREVENTION FOR PRIVACY & COMPLIANCE

- Transparent remediation capabilities automatically block, quarantine, reroute, blind copy, encrypt, or allow messages based on user-configurable policies, to prevent data leakage.
- Pre-Defined compliance dictionaries for GLB, HIPAA, PCI and other regulations are customizable, based on policy requirements for real-time data loss prevention and specific industry regulations.
- Optional seamless email encryption secures confidential messages for delivery to any recipient without the need for a dedicated server, avoiding the costs associated with most encryption technology.
- E-Profiling data discovery & classification lets you classify types of sensitive data files, thereby training the system on what to look for and the actions to take when such data is discovered in outbound communications.
- Centralized data loss policy management applies a single policy across multiple protocols to protect data-in-motion from loss and policy violations.

### **RELIABLE ALWAYS-ON EMAIL SECURITY**

- Fully redundant messaging ensures always-on security, including message-level, logical, geographic, and hardware redundancy. (Available on 770R, 970, and 1170 models.
- Patented queue replication ensures no communication is ever lost.
- Dynamic on-demand clustering allows you to replicate configuration settings and messaging queues across multiple systems in minutes.

### EASILY EXTEND PROTECTION TO YOUR WEB TRAFFIC

- Acceptable use and application controls allow you to centrally manage and restrict Internet and application usage with granular policies for users and groups, including time-based and IP-based policies for stronger and more flexible control. Reduces web liabilities and exposure to threats.
- URL filtering & categorization dynamically analyzes and blocks access to websites based on content and policies. Provides immediate and accurate network defense against malicious and inappropriate websites.
- Real-time in-the-cloud URL inspection analyzes each and every URL at the connection level to determine risk levels. Compromised URLs and those containing threats are blocked at the perimeter before they enter your network for faster, safer web surfing.
- Traffic enhancements include web caching, enhanced HTTP scanning, large file downloads, and streaming media support to reduce bandwidth consumption, server loads, and latency for web traffic.
- Management reporting tools provide a holistic view of your web security. Includes user-based reporting and a web dashboard for monitoring web usage and web threats.

### **RECOMMENDED FOR MID-SIZE TO LARGE ENTERPRISES, GOVERNMENTS, AND ISPs INCLUDING GLOBAL 2000 AND FORTUNE 500** ORGANIZATIONS

MatchGuard

XCS Datasheet

WatchGuard® Extensible Content Security (XCS) appliances deliver stringent security and privacy for inbound and outbound email. Bundle the XCS with a Web Security subscription and have comprehensive control over email and web traffic for powerful, unified protection.

### WHY BUY AN XCS SOLUTION?

With an XCS email and web security

- solution your business has:
- efficient, consolidated content security
- and threat prevention across multiple protocols
  - total visibility into and control of all
    - email and web traffic
    - tools and information needed
      - to demonstrate compliance
    - significant reduction in the costs and administrative burdens of running multiple point solutions

This adds up to solid protection that aligns with industry regulations, a low total cost of ownership, with more time to focus on other IT priorities.

# "The XCS platform "... dramatically reduced our email volume & exposure to malicious email-based attacks."

# **Centralized Management and Reporting**

WatchGuard

- Set-it-and-forget-it administration allows you to apply a single policy across multiple protocols to control inbound and outbound traffic so you spend less time defending your messaging borders and more time focusing on higher business value IT projects.
- A holistic view of what is entering and exiting your network across multiple protocols allows you to eliminate security gaps and reduce administration efforts required for point solutions.
- Integrated system reports can be accessed with one-click administration for customizable reports at specified intervals and in varying file formats. Meet audit requirements with easily exported or locally saved time-, feature-, and group-based reports.

# **Block 98% of Unwanted Traffic at the Perimeter**

XCS utilizes WatchGuard Reputation Enabled Defense to identify malicious senders and block over 98% of threats based on real-time behavior. This goes beyond simple sender reputation, providing an all-encompassing view of the behavior of an IP address in real time. By cross-referencing and analyzing data across multiple protocols, it ensures malicious and unwanted traffic never enters your network.

# **Defense-in-Depth Content Filtering**

Inbound and outbound email and web traffic undergo multiple layers of deep inspection. Content, attachments, images, headers, and sender information are examined. The system looks at who is sending the message, what it contains, how the message is structured, where it is directing the recipient. This establishes the threat suspect level – ensuring only safe communications pass through your network.

## **Real-Time Data Loss Prevention**

Block, quarantine, allow, encrypt, or reroute data-in-motion over multiple protocols based on policies you set for an extensive risk management/policy enforcement boundary. Eliminates the need for multiple point products and ensures privacy and compliance.

# **Subscription Options**

- Simple installation and configuration with the XCS initialization wizard ensures critical steps are not missed while getting your security up and running in minutes
- Frequent configuration and management tasks are easily accessible via a common screen, ensuring fool-proof setup and removing the frustration of day-to-day administration
- Data loss prevention policies are easy to implement with a step-bystep wizard, allowing you to define outbound content controls for privacy and compliance with minimal effort
- Automated software updates management takes the guess-work out of managing new releases and ensures you have the most current security and up-to-date protection

## **Hardware and Virtualized Deployment Options**

For organizations with VMware virtualized infrastructures, all of the protection available with XCS hardware can also be deployed as a virtual appliance. For information about editions and compatibility, see www.watchguard.com/xcsv

# **Expert Guidance and Support**

Every XCS appliance comes with a subscription\* to LiveSecurity Plus, a comprehensive support and maintenance program that provides:

- Hardware warranty with advance hardware replacement
- 24/7 technical support
- Software updates
- Threat alerts
