## Troubleshooting

**Error and Maintenance Messages**
- Paper Jams
  - Paper is Jammed in the MP tray
  - Paper is Jammed in the Paper Tray
  - Paper is Jammed in the Back of the Machine
  - Paper is Jammed inside the Machine
  - Paper is Jammed in the 2-sided Tray
  - Paper is Jammed in the Mailbox Unit

**Printing Problems**

**Improve the Print Quality**

**Network Problems**
- Error Messages
- Use the Network Connection Repair Tool (Windows®)
- Where Can I Find My Brother Machine’s Network Settings?
- I Cannot Complete the Wireless Network Setup Configuration
- My Brother Machine Cannot Print over the Network
- I Want to Check that My Network Devices are Working Correctly

**Other Problems**

**Check the Machine Information**

**Reset Functions**
- Network Reset
- Factory Reset

## Routine Maintenance

**Replace Supplies**
- Replace the Toner Cartridge
- Replace the Drum Unit

**Clean the Machine**
- Clean the Touchscreen LCD
- Clean the Corona Wire
- Clean the Drum Unit
- Clean the Paper Pick-up Rollers

**Check the Remaining Life of Parts**

## Machine Settings

**Change Machine Settings from the Control Panel**

**General Settings**

**Settings and Features Tables**

**Change Machine Settings from Your Computer**

Definitions of Notes

We use the following symbols and conventions throughout this User’s Guide:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![WARNING]</td>
<td>WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injuries.</td>
</tr>
<tr>
<td>![CAUTION]</td>
<td>CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injuries.</td>
</tr>
<tr>
<td>![IMPORTANT]</td>
<td>IMPORTANT indicates a potentially hazardous situation which, if not avoided, may result in damage to property or loss of product functionality.</td>
</tr>
<tr>
<td>![NOTE]</td>
<td>NOTE specifies the operating environment, conditions for installation, or special conditions of use.</td>
</tr>
<tr>
<td>![Tips]</td>
<td>Tips icons indicate helpful hints and supplementary information.</td>
</tr>
<tr>
<td>![Electrical Hazard]</td>
<td>Electrical Hazard icons alert you to possible electrical shock.</td>
</tr>
<tr>
<td>![Fire Hazard]</td>
<td>Fire Hazard icons alert you to the possibility of a fire.</td>
</tr>
<tr>
<td>![Hot Surface]</td>
<td>Hot Surface icons warn you not to touch hot machine parts.</td>
</tr>
<tr>
<td>![Prohibition]</td>
<td>Prohibition icons indicate actions you must not perform.</td>
</tr>
<tr>
<td><strong>Bold</strong></td>
<td>Bold style identifies buttons on the machine’s control panel or computer screen.</td>
</tr>
<tr>
<td><em>Italics</em></td>
<td>Italicised style emphasises an important point or refers you to a related topic.</td>
</tr>
<tr>
<td><strong>Courier New</strong></td>
<td>Courier New font identifies messages shown on the machine’s LCD.</td>
</tr>

Before Using Your Machine

Before attempting any printing operation, confirm the following:

- Make sure you have installed the printer driver.
- For USB or network cable users: Make sure the interface cable is physically secure.

Firewall (Windows®)

If your computer is protected by a firewall and you are unable to network print, you may need to configure the firewall settings. If you are using the Windows® Firewall and you installed the printer driver from the CD-ROM, the necessary firewall settings have already been set. If you are using any other personal firewall software, see the User's Guide for your software or contact the software manufacturer.

Related Information

- Introduction to Your Brother Machine
Control Panel Overview

The control panel may vary depending on your model.

1. Liquid Crystal Display (LCD)
   Displays messages to help you set up and use the machine.

   Wireless Network Models
   A four-level indicator shows the wireless signal strength if you are using a wireless connection.

   ![Wireless Signal Strength](image)

2. Data LED
   The Data LED blinks depending on the machine’s status.
   When the Data LED is on, data is in the machine’s memory. When the Data LED blinks, the machine is receiving or processing data.

3. Error LED
   The Error LED blinks when the LCD displays an error or an important status message.

4. Menu Buttons
   **OK**
   Press to store your machine’s settings. After you change a setting, the machine returns to the previous menu level.

   **Back**
   • Press to go back one level in the menu.
   • Press to select the previous digit when entering numbers.
• Press to scroll through menus and options.
• Press to enter a number or to increase or decrease the number. Hold down ▲ or ▼ to scroll faster. When you see the number you want, press OK.

5. Secure
Press to print jobs saved in the memory when you enter your four-digit password.

6. Go
• Press to clear certain error messages. To clear all other errors, follow the LCD instructions.
• Press to print any data remaining in the machine's memory.
• Press to select the displayed option. After you change a setting, the machine returns to Ready Mode.

7. Cancel
• Press to cancel the current setting.
• Press to cancel a programmed print job and clear it from the machine's memory. To cancel multiple print jobs, hold down Cancel until the LCD displays [Cancel All Jobs].

8. Power On/Off
• Turn the machine on by pressing .
• Turn the machine off by pressing and holding down . The LCD displays [Shutting Down] for a few seconds before going off.

9. WiFi, Network, or Report buttons
• Non-Network Models:
  Report
  Press the Report button to print the Printer Settings page.
• Wired Network Models:
  Network
  Press the Network button to set up wired network settings.
• Wireless Network Models:
  WiFi
  Launch the wireless installer on your computer and press the WiFi button. Follow the on-screen instructions to set up a wireless connection between your machine and your network.
  When the WiFi light is on, your Brother machine is connected to a wireless access point. When the WiFi light blinks, the wireless connection is down, or your machine is in the process of connecting to a wireless access point.
1. **Touchscreen Liquid Crystal Display (LCD)**
   Access menus and options by pressing them on the Touchscreen.

2. **Power On/Off**
   - Turn the machine on by pressing the power button.
   - Turn the machine off by pressing and holding down the power button. The LCD displays **[Shutting Down]** for a few seconds before going off.

3. **Touchpanel**
   - **(Back)**
     Press to go back to the previous menu.
   - **(Home)**
     - Press to return to the Home screen.
     - While the machine is in Sleep Mode, the Home icon blinks.
   - **(Cancel)**
     - Press to cancel an operation (available when lit).
     - Press to cancel a programmed print job and clear it from the machine's memory. To cancel multiple print jobs, hold down the cancel button until the LCD displays **[Cancel All Jobs]**.
   - **(WiFi)**
     Press to display the previous or next page.

4. **(WiFi)**
   (For infrastructure mode)
   When the WiFi light is on, your Brother machine is connected to a wireless access point. When the WiFi light blinks, the wireless connection is down, or your machine is in the process of connecting to a wireless access point.
The WiFi LED is always off.

Related Information

- Introduction to Your Brother Machine
From the Home screen, you can access the Wi-Fi setup, Toner level, Settings, and Functions screen.

The Home screen displays the machine’s status when the machine is idle. This screen is also called the Ready Mode screen. When displayed, this screen indicates that your machine is ready for the next command.

If Active Directory® Authentication or LDAP Authentication is enabled, the machine's control panel will be locked. The available features vary depending on your model.

1. **(Wireless Status)**
   - If you are using a wireless connection, a four-level indicator in the Home screen displays the current wireless signal strength.
     - 0 Max
   - If you see WiFi at the top on the screen, press it to configure wireless settings.

2. **(Toner)**
   - Displays the remaining toner life. Press to access the [Toner] menu.

3. **[Settings]**
   - Press to access the [Settings] menu.
     - Use the Settings menu to access all of your Brother machine's settings.
     - If Setting Lock has been turned on, a lock icon appears on the LCD. You must unlock the machine to change settings.

4. **[Functions]**
   - Press to access the Functions screen.
   - **[Secure]**
     - Press to access the Secure Print option.

How to Navigate the Touchscreen LCD

Press your finger on the LCD to operate it. To display and access all the options, press ▲ or ▼ on the Touchpanel to scroll through them.

The following steps explain how to navigate through changing the machine's setting. In this example, the LCD Backlight setting is changed from [Light] to [Med].

**IMPORTANT**

DO NOT press the LCD with a sharp object such as a pen or stylus. It may damage the machine.

**NOTE**

DO NOT touch the LCD immediately after plugging in the power cord or turning on the machine. Doing this may cause an error.

1. Press [Settings].

2. Press ▲ or ▼ to display the [General Setup] option, and then press [General Setup].

3. Press ▲ or ▼ to display the [Panel Control] option, and then press [Panel Control].

4. Press [LCD Settings].
5. Press [Backlight].

6. Press ▲ or ▼ to display the [Med] option, and then press [Med].

7. Press ☐.

Access Brother Utilities (Windows®)

Brother Utilities is an application launcher that offers convenient access to all Brother applications installed on your computer.

1. Do one of the following:
     Click (Start) > All Programs > Brother > Brother Utilities.
   - (Windows® 8 and Windows Server® 2012)
     Tap or click (Brother Utilities) either on the Start screen or the desktop.
   - (Windows® 8.1 and Windows Server® 2012 R2)
     Move your mouse to the lower left corner of the Start screen and click (if you are using a touch-based device, swipe up from the bottom of the Start screen to bring up the Apps screen).
     When the Apps screen appears, tap or click (Brother Utilities).

2. Select your machine (where XXXX is the name of your model).

3. Choose the operation you want to use.

Load and Print Plain Paper, Letterhead, Coloured Paper, Thin Paper and Recycled Paper Using the Paper Tray

- If the Check Size setting is set to On and you pull the paper tray out of the machine, a message appears on the LCD asking if you want to change the paper size and paper type. Change the paper size and paper type settings if needed, following the LCD instructions.
- When you load a different size and type of paper in the tray, you must change the Paper Size and Paper Type settings in the machine or on your computer, also.

1. Pull the paper tray completely out of the machine.

2. Press and slide the paper guides to fit the paper.
   Press the green release levers to slide the paper guides.

3. Fan the stack of paper well.

4. Load paper in the paper tray with the printing surface face down.
   When you use Letterhead or Preprinted paper, load the paper in the correct orientation as shown in the illustrations.

## Related Information

- [Paper Handling](#)
Using Special Paper

Always test paper samples before purchasing them to ensure desirable performance.

- DO NOT use inkjet paper; it may cause a paper jam or damage your machine.
- If you use bond paper, paper with a rough surface, or paper that is wrinkled or creased, the paper may exhibit degraded performance.

Store paper in its original packaging and keep it sealed. Keep the paper flat and away from moisture, direct sunlight and heat.

**IMPORTANT**

Some types of paper may not perform well or may cause damage to your machine.

DO NOT use paper:

- that is highly textured
- that is extremely smooth or shiny
- that is curled or warped
- that is coated or has a chemical finish
- that is damaged, creased or folded
- that exceeds the recommended weight specification in this guide
- with tabs and staples
- with letterheads using low temperature dyes or thermography
- that is multipart or carbonless
- that is designed for inkjet printing

If you use any of the types of paper listed above, they may damage your machine. This damage is not covered under any Brother warranty or service agreement.

Change the Default Print Settings (Windows®)

When you change print settings from within a program, the changes apply only to the items you are printing in that program, at that time. To select print settings to use for all of your Windows® programs, all the time, use these steps to change the default print settings.

1. Do one of the following:
   - (For Windows® XP and Windows Server® 2003)
     Click Start > Printers and Faxes.
   - (For Windows Vista® and Windows Server® 2008)
     Click (Start) > Control Panel > Hardware and Sound > Printers.
   - (For Windows® 7 and Windows Server® 2008 R2)
     Click (Start) > Devices and Printers.
   - (For Windows® 8)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings, and then click Control Panel. In the Hardware and Sound group, click View devices and printers.
   - (For Windows Server® 2012)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings, and then click Control Panel. In the Hardware group, click View devices and printers.
   - (For Windows Server® 2012 R2)
     Click Control Panel on the Start screen. In the Hardware group, click View devices and printers.

2. Right-click the Brother XXX-XXXX icon (where XXXX is your model name), and then select Printer properties. If printer driver options appear, select your printer driver.

3. Click the General tab, and then click the Printing Preferences... or Preferences... button.

   The printer driver dialog box appears.

   - To configure the tray settings, click the Device Settings tab.
   - To change the printer port, click the Ports tab.

4. Select the print settings you want to use as defaults for all of your Windows® programs.

5. Click OK.

6. Close the printer properties dialog box.

Configure the Optional Tray Settings (Windows®)

Access your machine's Properties to auto-detect your machine's Optional Tray and serial number.

The printer driver automatically detects the Optional Tray during the driver installation. If you added the Optional Tray after the driver installation, follow these steps.

1. Do one of the following:
   - (For Windows® XP and Windows Server® 2003)
     Click Start > Printers and Faxes.
   - (For Windows Vista® and Windows Server® 2008)
     Click (Start) > Control Panel > Hardware and Sound > Printers.
   - (For Windows® 7 and Windows Server® 2008 R2)
     Click (Start) > Devices and Printers.
   - (For Windows® 8)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings, and then click Control Panel. In the Hardware and Sound group, click View devices and printers.
   - (For Windows Server® 2012)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings, and then click Control Panel. In the Hardware group, click View devices and printers.
   - (For Windows Server® 2012 R2)
     Click Control Panel on the Start screen. In the Hardware group, click View devices and printers.

2. Right-click the Brother XXX-XXXX icon (where XXXX is your model name), and then select Printer properties. If printer driver options appear, select your printer driver.

3. Select the Device Settings tab.

4. Click the Auto Detect button.

5. Click the Apply button.

The Auto Detect function is not available under the following machine conditions:

- The machine power switch is off.
- The machine is in an error state.
- The machine is in a network shared environment.
- The cable is not connected to the machine correctly.

Print Settings (Windows®)

Basic Tab

1. **Paper Size**
   Select the size of the paper you want to use. You can either choose from standard paper sizes or create a custom paper size.

2. **Orientation**
   Select the orientation (portrait or landscape) of your printout.
   If your application contains a similar setting, we recommend that you set the orientation using the application.

3. **Copies**
   Type the number of copies (1-999) that you want to print in this field.
   **Collate**
   Select this option to print sets of multi-page documents in the original page order. When this option is selected, one complete copy of your document will print, and then reprint according to the number of copies you choose. If this option is not selected, then each page will print according to the number of copies chosen before the next page of the document is printed.

4. **Media Type**
   Select the type of media you want to use. To achieve the best print results, the machine automatically adjusts its print settings according to the selected media type.
5. Resolution
Select the print resolution. As print resolution and speed are related, the higher the resolution, the longer it will take to print the document.

6. Print Settings
Select the type of document you want to print.

Manual Settings...
Specify advanced settings such as brightness, contrast, and other settings.

Graphics
Use Printer Halftone
Select this option to use the printer driver to express halftones.
Brightness
Specify the brightness.
Contrast
Specify the contrast.

Graphics Quality
Select either Graphics or Text for the best print quality, based on the type of document you are printing.

Improve Grey Printing
Select this option to improve the image quality of shaded areas.

Improve Pattern Printing
Select this option to improve the pattern printing if printed fills and patterns are different from the fills and patterns you see on your computer screen.

Improve Thin Line
Select this option to improve the image quality of thin lines.

Use System Halftone
Select this option to use Windows® to express halftones.

TrueType Mode
Mode
Select how the fonts are processed for printing.

Use Printer TrueType Fonts
Select whether to use built-in fonts for the font processing.

7. Multiple Page
Select this option to print multiple pages on a single sheet of paper or print one page of your document on multiple sheets.

Page Order
Select the page order when printing multiple pages on a single sheet of paper.

Border Line
Select the type of border to use when printing multiple pages on a single sheet of paper.

8. 2-sided / Booklet
Select this option to print on both sides of the paper or print a document in booklet format using 2-sided printing.

2-sided Settings button
Click this button to select the type of 2-sided binding. Four types of 2-sided bindings are available for each orientation.
9. **Paper Source**
   Select the paper source setting according to your print conditions or purpose.

   **First Page**
   Select the paper source to use for printing the first page.

   **Other Pages**
   Select the paper source to use for printing the second and subsequent pages.

**Advanced Tab**

1. **Scaling**
   Select these options to enlarge or reduce the size of the pages in your document.

   **Fit to Paper Size**
   Select this option to enlarge or reduce the document pages to fit a specified paper size. When you select this option, select the paper size you want from the drop-down list.

   **Free**
   Select this option to enlarge or reduce the document pages manually. When you select this option, type a value into the field.

2. **Reverse Print**
   Select this option to rotate the printed image 180 degrees.
3. **Use Watermark**
   Select this option to print a logo or text on your document as a watermark. Select one of the preset watermarks, add a new watermark, or use an image file you have created.

4. **Header-Footer Print**
   Select this option to print the date, time and PC login user name on the document.

5. **Toner Save Mode**
   Select this feature to conserve toner by using less toner to print documents; printouts appear lighter, but are still legible.

6. **Secure Print**
   This feature ensures that confidential or sensitive documents do not print until you enter a password on the machine's control panel.

7. **Administrator**
   This feature allows you to change the administrator password and restrict various printing functions.

8. **User Authentication**
   This feature allows you to confirm the restrictions for each user.

9. **Output Tray (Available only for certain models)**
   Select the output tray for printed pages.
   - **MX Stacker**
     Ejects paper into the standard output tray. When the standard output tray becomes full the printer automatically selects the next available bin.
   - **MX Sorter**
     When you print multiple copies, each copy is ejected onto a different bin from 1 to 4.
   - **Use Std. Tray when full**
     Select this option to continue printing, even if the Mailbox bin is full. When you select this option, the machine continues the print job, ejecting the remaining pages onto the machine's main output tray when the Mailbox bin is full.

10. **Other Print Options button**
   - **Sleep Time**
     Specify the amount of time that passes before the machine enters Sleep Mode.
   - **Macro**
     Select this feature to print an electronic form (macro), which you have stored in your machine's memory, as an overlay on the print job.
   - **Density Adjustment**
     Specify the print density.
   - **Improve Print Output**
     Select this option to reduce the amount of paper curling and improve the toner fixing.
   - **Skip Blank Page**
     Select this option to allow the printer driver to automatically detect blank pages and exclude them from printing.
   - **Print Text in Black**
     Select this option when you want to print colour text in black.
   - **Print Archive**
     Select this option to save the print data as a PDF file to your computer.
   - **Eco settings**
     Select this option to reduce printing noise.

Print One Page Duplicates on Different Types of Paper

Use the Carbon Copy function to make multiple copies of the same print data, as if printing on carbon paper. Send the data to individual paper trays that you pre-loaded with different paper types or colours.

For example, you may want to set the machine to send your print data to Tray1, which you have pre-loaded with blue coloured paper, and then reprint the data in a certain location on the page from the MP Tray, which you have pre-loaded with yellow coloured paper that already contains text.

If you load blue paper in Tray 1 and yellow paper in the MP tray, the printer will automatically feed paper for Sheet 1 from Tray 1 and Sheet 2 from the MP Tray.

If you enable the Carbon Copy function, the machine will always make copies automatically.

(Windows®)
The carbon copy function also allows you to select a different printing macro for each page.

1. Press ▲ or ▼ to display the [Print Menu] option, and then press OK.
2. Press ▲ or ▼ to display the [Carbon Menu] option, and then press OK.
3. Press ▲ or ▼ to display the [Carbon Copy] option, and then press OK.
4. Press ▲ or ▼ to display the [On] option, and then press OK.
5. Press ▲ or ▼ to display the [Copies] option, and then press OK.
6. Press ▲ or ▼ to enter the number of copies you want, and then press OK.
7. Press ▲ or ▼ to display the [Copy1 Tray] option, and then press OK.
8. Press ▲ or ▼ to display the paper tray you want to configure as [Copy1 Tray], and then press OK.

(Windows®)

a. Press ▲ or ▼ to display the [Copy1 Macro] option, and then press OK.
b. Press ▲ or ▼ to display the ID number of the macro you want to use, and then press OK.

9. Repeat these steps until you have selected all the tray settings for each copy.
10. Send your print job to the machine.

1. Press ▲ or ▼ to display the [Settings] > [Print Menu] > [Carbon Menu] > [Carbon Copy] > [On].
2. Press ▲ or ▼ to display the [Copies] option, and then press the [Copies] option.
3. Enter the number of copies you want, and then press [OK].
4. Press ▲ or ▼ to display the [Copy1 Tray] option, and then press the [Copy1 Tray] option.
5. Press ▲ or ▼ to display the paper tray you want to configure as [Copy1 Tray], and then press the paper tray.

(Windows®)

a. Press ▲ or ▼ to display the [Copy1 Macro] option, and then press the [Copy1 Macro] option.
b. Press ▲ or ▼ to display the ID number of the macro you want to use, and then press it.

6. Repeat these steps until you have selected all the tray settings for each copy.
7. Send your print job to the machine.

Network Management Software and Utilities

Configure and change your Brother machine's network settings using a management utility.

- Learn about Network Management Software and Utilities
- Change Machine Settings from Your Computer
- Change Machine Settings Using Web Based Management
Learn about Network Management Software and Utilities

Web Based Management

Web Based Management is a utility that uses a standard web browser to manage your machine using the Hyper Text Transfer Protocol (HTTP) or Hyper Text Transfer Protocol over Secure Socket Layer (HTTPS). Type your machine’s IP address into your web browser to access and change your print server settings.

BRAdmin Light (Windows®)

BRAdmin Light is a utility for the initial setup of Brother network-connected devices. This utility can search for Brother products on your network, view the status and configure the basic network settings, such as IP address.

Go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to download BRAdmin Light.

- If you are using Windows® Firewall, or the firewall function of an anti-spyware or antivirus application, temporarily disable them. When you are sure you can print, configure the software settings following the instructions.

BRAdmin Professional 3 (Windows®)

BRAdmin Professional 3 is a utility for more advanced management of network-connected Brother devices. This utility can search for Brother products on your network and view the device status from an easy-to-read Windows® Explorer-style screen that changes colour to identify the status of each device. You can configure network and device settings, and update device firmware from a Windows® computer on your LAN. BRAdmin Professional 3 can also log activity of Brother devices on your network and export the log data in an HTML, CSV, TXT, or SQL format. For users who want to monitor locally-connected machines, install the Print Auditor Client software on the client computer. This utility allows you to use BRAdmin Professional 3 to monitor machines that are connected to a client computer via the USB interface.

- Go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to download the latest version of Brother’s BRAdmin Professional 3 utility.
- Node name: The node name appears in the current BRAdmin Professional 3 window. The default node name is "BRNxxxxxxxxxxxx" for a wired network or "BRWxxxxxxxxxxxx" for a wireless network (where "xxxxxxxxxxxx" is your machine’s MAC Address / Ethernet address).
- If you are using Windows® Firewall, or the firewall function of an anti-spyware or antivirus application, temporarily disable them. When you are sure you can print, configure the software settings following the instructions.

Additional Methods of Configuring Your Brother Machine for a Wireless Network

To connect your machine to your wireless network, we recommend using the Installation CD-ROM.

- Before Configuring Your Brother Machine for a Wireless Network
- Configure Your Machine for a Wireless Network
- Configure Your Machine for a Wireless Network Using the One Push Method of Wi-Fi Protected Setup™ (WPS)
- Configure Your Machine for a Wireless Network Using the PIN Method of Wi-Fi Protected Setup™ (WPS)
- Configure Your Machine for a Wireless Network in Ad-Hoc Mode (For IEEE 802.11b/g/n)
- Configure Your Machine for a Wireless Network Using the Machine’s Control Panel Setup Wizard
- Configure Your Machine for a Wireless Network When the SSID Is Not Broadcast
- Configure Your Machine for an Enterprise Wireless Network
- Use Wi-Fi Direct®
Before attempting to configure a wireless network, confirm the following:

- Before configuring wireless settings, you must know your Network name (SSID) and Network Key. If you are using an enterprise wireless network, you must know the User ID and Password.

  If you do not know the security information, please consult the router manufacture, your system administrator, or your Internet provider.

- To achieve optimum results with normal everyday document printing, place the Brother machine as close to the wireless LAN access point/router as possible with minimal obstructions. Large objects and walls between the two devices and interference from other electronic devices can affect the data transfer speed of your documents.

  Due to these factors, wireless may not be the best method of connection for all types of documents and applications. If you are printing large files, such as multi-page documents with mixed text and large graphics, you may want to consider selecting wired Ethernet for faster data transfer (supported models only), or USB for the fastest throughput speed.

- Although the Brother machine can be used in both a wired and wireless network (supported models only), only one connection method can be used at a time. However, a wireless network connection and Wi-Fi Direct connection, or a wired network connection (supported models only) and Wi-Fi Direct connection can be used at the same time.

- Additional Methods of Configuring Your Brother Machine for a Wireless Network
Configure Your Machine for a Wireless Network

1. Turn on your computer and put the Brother Installation CD-ROM into your CD-ROM drive.
   - For Windows®, follow these instructions.
   - For Macintosh, click Driver Download to go to the Brother Solutions Center. Follow the on-screen instructions to install printer drivers.

2. The opening screen appears automatically.
   Choose your language, and then follow the on-screen instructions.
   - (Windows® XP)
     If the Brother screen does not appear automatically, go to My Computer. Double-click the CD-ROM icon, and then double-click start.exe.
   - (Windows Vista® and Windows® 7)
     If the Brother screen does not appear automatically, go to Computer. Double-click the CD-ROM icon, and then double-click start.exe.
   - (Windows® 8)
     Click the File Explorer icon on the taskbar, and then go to Computer (This PC). Double-click the CD-ROM icon, and then double-click start.exe.
     - If the User Account Control screen appears, do one of the following:
       - (Windows Vista®) Click Allow.
       - (Windows® 7/Windows® 8) Click Yes.

3. Choose Wireless Network Connection (Wi-Fi), and then click Next.
4. Follow the on-screen instructions.

After you have completed the wireless setup, the installer program walks you through installing the drivers. Click Next in the installation dialog box and follow the on-screen instructions.

- Additional Methods of Configuring Your Brother Machine for a Wireless Network
Configure Your Machine for a Wireless Network Using the One Push Method of Wi-Fi Protected Setup™ (WPS)

If your wireless access point/router supports WPS (Push Button Configuration), you can use WPS from your machine’s control panel menu to configure your wireless network settings.

- Routers or access points that support WPS are marked with this symbol:

> HL-L5200DW/HL-L5200DWT
> HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT

**HL-L5200DW/HL-L5200DWT**

1. Press ▲ or ▼ to select the [Network] option, and then press OK.
2. Press ▲ or ▼ to select the [WLAN] option, and then press OK.
3. Press ▲ or ▼ to select the [WPS] option, and then press OK.
4. When [WLAN Enable?] appears, press ▲ to select On.
   - This will start the wireless setup wizard. To cancel, press Cancel.
5. When the LCD displays [Press Key on rtr], press the WPS button on your wireless access point/router.
   - Press ▲ on the machine’s control panel. Your machine will automatically detect your wireless access point/router and try to connect to your wireless network.

If your wireless device is connected successfully, the machine’s LCD displays [Connected].

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

**HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT**

1. Press [Settings] > [Network] > [WLAN] > [WPS].
2. When [Switch network interface to wireless?] appears, press [Yes].
   - This will start the wireless setup wizard. To cancel, press [No].
3. When the Touchscreen displays [Start WPS on your wireless access point/router, then press [OK]], press the WPS button on your wireless access point/router. Then press [OK] on your machine. Your machine will automatically detect your wireless access point/router and try to connect to your wireless network.

If your wireless device is connected successfully, the machine’s LCD displays [Connected].
You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

Configure Your Machine for a Wireless Network Using the PIN Method of Wi-Fi Protected Setup™ (WPS)

If your wireless LAN access point/router supports WPS, you can use the Personal Identification Number (PIN) Method to configure your wireless network settings.

The PIN Method is one of the connection methods developed by the Wi-Fi Alliance®. By submitting a PIN created by an Enrollee (your machine) to the Registrar (a device that manages the wireless LAN), you can set up the wireless network and security settings. For more information on how to access WPS mode, see the instructions provided with your wireless access point/router.

**Type A**
Connection when the wireless LAN access point/router (1) doubles as Registrar.

**Type B**
Connection when another device (2), such as a computer, is used as Registrar.
Routers or access points that support WPS are marked with this symbol:

---

1. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{Network}]\) option, and then press \(\text{OK}\).

2. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{WLAN}]\) option, and then press \(\text{OK}\).

3. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{WPS w/PIN Code}]\) option, and then press \(\text{OK}\).

4. When \([\text{WLAN Enable?}]\) appears, press \(\text{a}\) to select On.

This will start the wireless setup wizard. To cancel, press \(\text{Cancel}\).

5. The LCD displays an eight-digit PIN and the machine starts searching for a wireless LAN access point/router.

6. Using a computer that is on the network, type "http://access point's IP address" in your browser (where "access point's IP address" is the IP address of the device that is being used as the Registrar).

7. Go to the WPS settings page and type the PIN, and then follow the on-screen instructions.

- The Registrar is usually the wireless LAN access point/router.
- The settings page will differ depending on the brand of wireless LAN access point/router. For more information, see the instructions supplied with your wireless LAN access point/router.

---

If you are using a Windows Vista®️, Windows®️ 7, or Windows®️ 8 computer as a Registrar, complete the following steps:

8. Do one of the following:
   - (Windows Vista®️)

---

>> HL-L5200DW/HL-L5200DWT
>> HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT

**HL-L5200DW/HL-L5200DWT**

1. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{Network}]\) option, and then press \(\text{OK}\).

2. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{WLAN}]\) option, and then press \(\text{OK}\).

3. Press \(\text{a}\) or \(\text{b}\) to select the \([\text{WPS w/PIN Code}]\) option, and then press \(\text{OK}\).

4. When \([\text{WLAN Enable?}]\) appears, press \(\text{a}\) to select On.

This will start the wireless setup wizard. To cancel, press \(\text{Cancel}\).

5. The LCD displays an eight-digit PIN and the machine starts searching for a wireless LAN access point/router.

6. Using a computer that is on the network, type "http://access point's IP address" in your browser (where "access point's IP address" is the IP address of the device that is being used as the Registrar).

7. Go to the WPS settings page and type the PIN, and then follow the on-screen instructions.

- The Registrar is usually the wireless LAN access point/router.
- The settings page will differ depending on the brand of wireless LAN access point/router. For more information, see the instructions supplied with your wireless LAN access point/router.

---

If you are using a Windows Vista®️, Windows®️ 7, or Windows®️ 8 computer as a Registrar, complete the following steps:

8. Do one of the following:
   - (Windows Vista®️)
Click (Start) > Network > Add a wireless device.

- (Windows® 7)

Click (Start) > Devices and Printers > Add a device.

- (Windows® 8)

Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Control Panel > Hardware and Sound > Devices and Printers > Add a device.

To use a Windows Vista®, Windows® 7, or Windows® 8 computer as a Registrar, you must register it to your network in advance. For more information, see the instructions supplied with your wireless LAN access point/router.

If you use Windows® 7 or Windows® 8 as a Registrar, you can install the printer driver after the wireless configuration by following the on-screen instructions. To install the full driver and software package, use the Brother Installation CD-ROM.

9. Select your machine and click Next.
10. Type the PIN displayed on the machine's LCD, and then click Next.
11. Select your network, and then click Next.
12. Click Close.

If your wireless device is connected successfully, the machine's LCD displays [Connected].

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model's Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

**HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT**

1. Press [Settings] > [Network] > [WLAN] > [WPS w/PIN Code].
2. When [Switch network interface to wireless?] appears, press [Yes].
   - This will start the wireless setup wizard. To cancel, press [No].
3. The LCD displays an eight-digit PIN and the machine starts searching for a wireless LAN access point/router.
4. Using a computer that is on the network, type "http://access point's IP address" in your browser (where "access point's IP address" is the IP address of the device that is being used as the Registrar).
5. Go to the WPS settings page and type the PIN, and then follow the on-screen instructions.

- The Registrar is usually the wireless LAN access point/router.
- The settings page will differ depending on the brand of wireless LAN access point/router. For more information, see the instructions supplied with your wireless LAN access point/router.

If you are using a Windows Vista®, Windows® 7, or Windows® 8 computer as a Registrar, complete the following steps:

6. Do one of the following:
   - (Windows Vista®)
     
     Click (Start) > Network > Add a wireless device.
   - (Windows® 7)
     
     Click (Start) > Devices and Printers > Add a device.
   - (Windows® 8)
     
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Control Panel > Hardware and Sound > Devices and Printers > Add a device.
To use a Windows Vista®, Windows® 7, or Windows® 8 computer as a Registrar, you must register it to your network in advance. For more information, see the instructions supplied with your wireless LAN access point/router.

If you use Windows® 7 or Windows® 8 as a Registrar, you can install the printer driver after the wireless configuration by following the on-screen instructions. To install the full driver and software package, use the Brother Installation CD-ROM.

7. Select your machine and click Next.
8. Type the PIN displayed on the machine's LCD, and then click Next.
9. Select your network, and then click Next.
10. Click Close.

If your wireless device is connected successfully, the machine's LCD displays [Connected].

You have completed the wireless network setup. Configure Your Machine for a Wireless Network in Ad-Hoc Mode Using an Existing SSID

If you are trying to pair your Brother machine to a computer that is already in Ad-Hoc mode and has a configured SSID, use these instructions.

**HL-L5200DW/HL-L5200DWT**

Before configuring your machine, we recommend writing down your wireless network settings. You will need this information before you continue with the configuration.

1. Check and record the current wireless network settings of the computer to which you are connecting.

   The wireless network settings of the computer you are connecting with must be set to Ad-Hoc mode with an SSID already configured. For more information on how to configure your computer in Ad-Hoc mode, see the instructions included with your computer or contact your network administrator.

<table>

Configure Your Machine for a Wireless Network Using the Machine's Control Panel Setup Wizard

Before configuring your machine, we recommend writing down your wireless network settings. You will need this information before you continue with the configuration.

1. Check and record the current wireless network settings of the computer to which you are connecting.

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Network Key</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

For example:

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td>HELLO</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Network Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>12345</td>
</tr>
</tbody>
</table>

- Your access point/router may support the use of multiple WEP keys, however your Brother machine supports the use of the first WEP key only.
- If you need assistance during setup and want to contact Brother customer service, make sure you have your SSID (Network Name) and Network Key ready. We cannot assist you in locating this information.
- If you do not know this information (SSID and Network Key), you cannot continue the wireless setup.

**How can I find this information?**

- Check the documentation provided with your wireless access point/router.
- The initial SSID could be the manufacturer's name or the model name.
- If you do not know the security information, please consult the router manufacture, your system administrator, or your Internet provider.

2. Press ▲ or ▼ to select the [Network] option, and then press OK.
3. Press ▲ or ▼ to select the [WLAN] option, and then press OK.
4. Press ▲ or ▼ to select the [Setup Wizard] option, and then press OK.
5. When [WLAN Enable?] appears, press ▲ to select On.
   This will start the wireless setup wizard. To cancel, press Cancel.
6. The machine will search for your network and display a list of available SSIDs. When a list of SSIDs appears, press ▲ or ▼ to select the SSID you want.
7. Press OK.
8. Do one of the following:
   - If you are using an authentication and encryption method that requires a Network Key, enter the Network Key you wrote down in the first step.
Enter the key, and then press OK to apply your settings.
To apply the settings, press ▲. To cancel, press ▼.
• If your authentication method is Open System and your encryption mode is None, go to the next step.

9. The machine attempts to connect to the wireless device you have selected.

If your wireless device is connected successfully, the machine’s LCD displays Connected.

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

**HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT**

Before configuring your machine, we recommend writing down your wireless network settings. You will need this information before you continue with the configuration.

1. Check and record the current wireless network settings of the computer to which you are connecting.

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Network Key</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

For example:

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td>HELLO</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Network Key</th>
</tr>

</tr>
</tbody>
</table>

• Your access point/router may support the use of multiple WEP keys, however your Brother machine supports the use of the first WEP key only.
• If you need assistance during setup and want to contact Brother customer service, make sure you have your SSID (Network Name) and Network Key ready. We cannot assist you in locating this information.
• If you do not know this information (SSID and Network Key), you cannot continue the wireless setup.

**How can I find this information?**

- Check the documentation provided with your wireless access point/router.
- The initial SSID could be the manufacturer's name or the model name.
- If you do not know the security information, please consult the router manufacture, your system administrator, or your Internet provider.

2. Press \[Settings\] > \[Network\] > \[WLAN\] > \[Setup Wizard\].

3. When \[Switch network interface to wireless?\] appears, press [Yes].
   This will start the wireless setup wizard. To cancel, press [No].

4. The machine will search for your network and display a list of available SSIDs.
   If a list of SSIDs is displayed, press ▲ or ▼ to display the SSID to which you want to connect, and then press the SSID.

5. Do one of the following:
   • If you are using an authentication and encryption method that requires a Network Key, enter the Network Key you wrote down in the first step.
     When you have entered all the characters, press [OK] and then press [Yes] to apply your settings.
• If your authentication method is Open System and your encryption mode is None, go to the next step.

6. The machine attempts to connect to the wireless device you have selected.

If your wireless device is connected successfully, the machine's LCD displays [Connected].

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model's Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

Configure Your Machine for a Wireless Network When the SSID Is Not Broadcast

Before configuring your machine, we recommend writing down your wireless network settings. You will need this information before you continue with the configuration.

1. Check and record the current wireless network settings.

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Community Mode</td>
</tr>
<tr>
<td>Infrastructure</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Shared Key</td>
</tr>
<tr>
<td>WPA/WPA2-PSK</td>
</tr>
</tbody>
</table>

For example:

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td>HELLO</td>
</tr>
</tbody>
</table>

2. Press ▲ or ▼ to select the [Network] option, and then press OK.
3. Press ▲ or ▼ to select the [WLAN] option, and then press OK.
4. Press ▲ or ▼ to select the [Setup Wizard] option, and then press OK.
5. When [WLAN Enable?] appears, press ▲ to select On.
   This will start the wireless setup wizard. To cancel, press Cancel.
6. The machine will search for your network and display a list of available SSIDs. Press ▲ or ▼ to select the [<New SSID>] option, and then press OK.
7. Enter the SSID name, and then press OK.
8. Press ▲ or ▼ to select the [Infrastructure] option, and then press OK.
9. Press ▲ or ▼ to select the Authentication Method you want, and then press OK.
10. Do one of the following:
    - If you selected the [Open System] option, press ▲ or ▼ to select the Encryption Type [None] or [WEP], and then press OK.

If your router uses WEP encryption, enter the key used as the first WEP key. Your Brother machine supports the use of the first WEP key only.

If you selected the [WPA2-PSK] option, press ▲ or ▼ to select the Encryption Type [AES] or [TKIP], and then press OK.
If you selected the [WEP] option for Encryption Type, enter the WEP key, and then press OK.

- If you selected the [Shared Key] option, enter the WEP key, and then press OK.
- If you selected the [WPA/WPA2-PSK] option, press ▲ or ▼ to select the Encryption Type [TKIP+AES] or [AES], and then press OK.

Enter the WPA key, and then press OK.

Your Brother machine supports the use of the first WEP key only.

11. To apply the settings, press ▲. To cancel, press ▼.

12. The machine will attempt to connect to the wireless device you have selected.

If your wireless device is connected successfully, the machine's LCD displays [Connected].

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model's Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

**HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT**

Before configuring your machine, we recommend writing down your wireless network settings. You will need this information before you continue with the configuration.

1. Check and record the current wireless network settings.

<table>
<thead>
<tr>
<th>Network Name (SSID)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Communication Mode</th>
<th>Authentication Method</th>
<th>Encryption Mode</th>
<th>Network Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>Infrastructure</td>
<td>Open System</td>
<td>NONE</td>
<td>-</td>
</tr>
<tr>
<td></td>
<td>WEP</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Shared Key</td>
<td>WEP</td>
<td></td>
</tr>
<tr>
<td></td>
<td>WPA/WPA2-PSK</td>
<td>AES</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>TKIP</td>
<td>(TKIP is supported for WPA-PSK only.)</td>
</tr>
</tbody>
</table>

For example:

**Network Name (SSID)**

HELLO

<table>
<thead>
<tr>

<td>12345678</td>
</tr>
</tbody>
</table>

If your router uses WEP encryption, enter the key used as the first WEP key. Your Brother machine supports the use of the first WEP key only.

2. Press [Settings] > [Network] > [WLAN] > [Setup Wizard].
3. When [Switch network interface to wireless?] appears, press [Yes].
   This will start the wireless setup wizard. To cancel, press [No].
4. The machine will search for your network and display a list of available SSIDs. Press ▲ or ▼ to display the [<New SSID>] option.
5. Press [<New SSID>].
6. Enter the SSID name, and then press [OK].
7. Press [Infrastructure].
8. Press ▲ or ▼ to display the Authentication Method you want.
10. Do one of the following:
    - If you selected the [Open System] option, press either [None] or [WEP].
      If you selected the [WEP] option for Encryption Type, enter the WEP key, and then press [OK].
    - If you selected the [Shared Key] option, enter the WEP key, and then press [OK].
    - If you selected the [WPA/WPA2-PSK] option, press either [TKIP+AES] or [AES] for Encryption Type.
      Enter the WPA key, and then press [OK].

11. To apply the settings, press [Yes]. To cancel, press [No].
12. The machine will attempt to connect to the wireless device you have selected.

If your wireless device is connected successfully, the machine’s LCD displays [Connected].

You have completed the wireless network setup. To install drivers and software necessary for operating your device, insert the Brother Installation CD-ROM to your computer or go to your model’s Downloads page on the Brother Solutions Center at support.brother.com to install drivers and software necessary for operating your device.

>> HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT
• If you configure your machine using EAP-TLS authentication, you must install the client certificate issued by a CA before you start configuration. Contact your network administrator about the client certificate. If you have installed more than one certificate, we recommend writing down the certificate name you want to use.

• If you verify your machine using the common name of the server certificate, we recommend writing down the common name before you start configuration. Contact your network administrator about the common name of the server certificate.

2. Press ▲ or ▼ to select the [Network] option, and then press OK.
3. Press ▲ or ▼ to select the [WLAN] option, and then press OK.
4. Press ▲ or ▼ to select the [Setup Wizard] option, and then press OK.
5. When [WLAN Enable?] appears, press ▲ to select On. This will start the wireless setup wizard. To cancel, press Cancel.
6. The machine will search for your network and display a list of available SSIDs. Press ▲ or ▼ to select the [<New SSID>] option, and then press OK.
7. Enter the SSID name, and then press OK.
8. Press ▲ or ▼ to select the [Infrastructure] option, and then press OK.
9. Press ▲ or ▼ to select the Authentication Method you want, and then press OK.
10. Do one of the following:
    • If you selected the [LEAP] option, enter the user ID, and then press OK.
      Enter the Password, and then press OK.
    • If you selected the [EAP-FAST], [PEAP] or [EAP-TTLS] option, press ▲ or ▼ to select the Inner Authentication Method [NONE], [CHAP], [MS-CHAP], [MS-CHAPv2], [PAP] or [GTC], and then press OK.

Depending on your Authentication Method, the Inner Authentication Method selections differ.

Press ▲ or ▼ to select the Encryption Type [TKIP+AES] or [AES], and then press OK.
Press ▲ or ▼ to select the Verification Method [No Verification], [CA] or [CA+Server ID], and then press OK.
- If you selected the [CA+Server ID] option, enter the server ID, user ID and password (if required), and then press OK for each option.
- For other selections, enter the user ID and the Password, and then press OK for each option.

If you have not imported a CA certificate into your machine, the machine will display the message [No Verification].

• If you selected the [EAP-TLS] option, press ▲ or ▼ to select the Encryption Type [TKIP+AES] or [AES], and then press OK.
When the machine displays a list of available Client Certificates, select the certificate you want.
Press ▲ or ▼ to select the Verification Method [No Verification], [CA] or [CA+Server ID], and then press OK.
- If you selected the [CA+Server ID] option, enter the server ID and user ID, and then press OK for each option.
- For other selections, enter the user ID, and then press OK.

Print from Your Mobile Device Using Wi-Fi Direct

Wi-Fi Direct is one of the wireless configuration methods developed by the Wi-Fi Alliance®. It allows you to configure a secured wireless network between your Brother machine and a mobile device, such as an Android™ device, Windows Phone® device, iPhone, iPod touch, or iPad, without using an access point. Wi-Fi Direct supports wireless network configuration using the one-push or PIN Method of Wi-Fi Protected Setup™ (WPS). You can also configure a wireless network by manually setting an SSID and password. Your Brother machine’s Wi-Fi Direct feature supports WPA2™ security with AES encryption.

1. Mobile device
2. Your Brother machine

- Although the Brother machine can be used in both a wired and wireless network, only one connection method can be used at a time. However, a wireless network connection and Wi-Fi Direct connection, or a wired network connection (supported models only) and Wi-Fi Direct connection can be used at the same time.
- The Wi-Fi Direct-supported device can become a Group Owner (G/O). When configuring the Wi-Fi Direct network, the G/O serves as an access point.
- Ad-hoc mode and Wi-Fi Direct cannot be used at the same time. Disable one function to enable the other. If you want to use Wi-Fi Direct while you are using Ad-hoc mode, set Network I/F to Wired LAN or disable Ad-hoc mode and connect your Brother machine to the access point.

Wi-Fi Direct Network Configuration Overview

The following instructions offer five methods for configuring your Brother machine in a wireless network environment. Select the method you prefer for your environment.

Check your mobile device for configuration.

1. Does your mobile device support Wi-Fi Direct?

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Go to Step 2</td>
</tr>
<tr>
<td>No</td>
<td>Go to Step 3</td>
</tr>
</tbody>
</table>

2. Does your mobile device support one-push configuration for Wi-Fi Direct?

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>See Related Information: Configure Your Wi-Fi Direct Network Using the One-Push Method.</td>
</tr>
<tr>
<td>No</td>
<td>See Related Information: Configure Your Wi-Fi Direct Network Using the PIN Method.</td>
</tr>
</tbody>
</table>

3. Does your mobile device support Wi-Fi Protected Setup™ (WPS)?

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Go to Step 4</td>
</tr>
<tr>
<td>No</td>
<td>See Related Information: Configure Your Wi-Fi Direct Network Manually.</td>
</tr>
</tbody>
</table>

4. Does your mobile device support one-push configuration for Wi-Fi Protected Setup™ (WPS)?

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>See Related Information: Configure Your Wi-Fi Direct Network Using the One-Push Method and Wi-Fi Protected Setup™ (WPS).</td>
</tr>
<tr>
<td>No</td>
<td>See Related Information: Configure Your Wi-Fi Direct Network Using the PIN Method of Wi-Fi Protected Setup™ (WPS).</td>
</tr>
</tbody>
</table>

To use Brother iPrint&Scan functionality in a Wi-Fi Direct network configured by one-push configuration using Wi-Fi Direct or by PIN Method configuration using Wi-Fi Direct, the device you use to configure Wi-Fi Direct must be running Android™ 4.0 or greater.

• Configure Your Wi-Fi Direct Network Manually
**Configure Your Wi-Fi Direct Network Using the One-Push Method**

If your mobile device supports Wi-Fi Direct, follow these steps to configure a Wi-Fi Direct network:

1. Press ▲ or ▼ to select the [Network] option, and then press OK.
2. Press ▲ or ▼ to select the [Wi-Fi Direct] option, and then press OK.
3. Press ▲ or ▼ to select the [Push Button] option, and then press OK.
4. When [Wi-Fi Direct On?] appears, press ▲ to accept. To cancel, press ▼.
5. Activate Wi-Fi Direct on your mobile device (see your mobile device's user's guide for instructions) when [Activate Wi-Fi Direct on other device and press OK.] appears on the machine's LCD. Press OK on your machine.

   This will start the Wi-Fi Direct setup. To cancel, press Cancel.

6. Do one of the following:
   - When your Brother machine is the Group Owner (G/O), connect your mobile device to the machine directly.
   - When your Brother machine is not the G/O, it will display available device names with which to configure a Wi-Fi Direct network. Press ▲ or ▼ to select the mobile device you want to connect to and press OK. Search for available devices again by pressing [Rescan].

7. If your mobile device connects successfully, the machine's LCD displays [Connected]. You have completed the Wi-Fi Direct network setup. For information on printing from your mobile device, go to your model's Manuals page on the Brother Solutions Center at support.brother.com to see the Mobile Print/Scan Guide for Brother iPrint&Scan.

**HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT**

If your mobile device supports Wi-Fi Direct, follow these steps to configure a Wi-Fi Direct network:

1. Press [Settings] > [Network] > [Wi-Fi Direct] > [Push Button].
3. Activate Wi-Fi Direct on your mobile device (see your mobile device's user's guide for instructions) when [Activate Wi-Fi Direct on other device. Then press [OK].] appears on the machine's LCD. Press [OK] on your Brother machine.

   This will start the Wi-Fi Direct setup. To cancel, press X.

4. Do one of the following:
   - When your Brother machine is the Group Owner (G/O), connect your mobile device to the machine directly.
   - When your Brother machine is not the G/O, it will display available device names with which to configure a Wi-Fi Direct network. Select the mobile device you want to connect to and press [OK]. Search for available devices again by pressing [Rescan].

5. If your mobile device connects successfully, the machine's LCD displays [Connected]. You have completed the Wi-Fi Direct network setup. For details on printing from your mobile device, go to your model's Manuals page on the Brother Solutions Center at support.brother.com to see the Mobile Print/Scan Guide for Brother iPrint&Scan.

## Wireless LAN Report Error Codes

### Related Models:

If the Wireless LAN Report shows that the connection failed, check the error code on the printed report and see the corresponding instructions in the table:

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Problem and Recommended Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>TS-01</td>
<td>The wireless setting is not activated, change the wireless setting to ON. If a network cable is connected to your machine, disconnect it and change the wireless setting of your machine to ON.</td>
</tr>
</tbody>
</table>
| TS-02      | The wireless access point/router cannot be detected.  
1. Check the following two points:  
   • Unplug the power to your wireless access point/router, wait for 10 seconds, and then plug it back in.  
   • If your WLAN access point/router is using MAC address filtering, confirm that the MAC address of the Brother machine is allowed in the filter.  
2. If you manually entered the SSID and security information (SSID/authentication method/encryption method/Network Key), the information may be incorrect. Reconfirm the SSID and security information and re-enter the correct information as necessary.  
How to confirm wireless security information (SSID/authentication method/encryption method/Network Key)  
   a. The Default security settings may be provided on a label attached to the WLAN access point/router. Or the manufacturer's name or model no. of the WLAN access point/router may be used as the default security settings.  
   b. See the documentation provided with your WLAN access point/router for information on how to find the security settings.  
   • If WLAN access point/router is set to not broadcast the SSID, the SSID will not automatically be detected. You will have to manually enter the SSID name.  
   • The Network key may also be described as the Password, Security Key or Encryption Key.  
This device does not support a 5GHz SSID/ESSID and you must select a 2.4 GHz SSID/ESSID. Make sure the access point/router is set to 2.4 GHz or 2.4 GHz/5 GHz mixed mode.  
If you do not know the SSID and wireless security settings of your WLAN access point/router or how to change the configuration, see the documentation provided with your WLAN access point/router, ask the manufacturer of your access point/router or ask to your Internet provider or network administrator. |
<p>| TS-03      | The wireless network and security setting you entered may be incorrect. Reconfirm the wireless network settings. If you do not know this information, ask your network administrator. |</p>
<table>
<thead>
<tr>
<th>Error Code</th>
<th>Problem and Recommended Solutions</th>
</tr>
</thead>
</table>
| TS-04      | The Authentication/Encryption methods used by the selected wireless access point/router are not supported by your machine.  
For infrastructure mode, change the authentication and encryption methods of the wireless access point/router. Your machine supports the following authentication methods:  
- WPA-Personal  
  TKIP or AES  
- WPA2-Personal  
  AES  
- Open  
  WEP or None (without encryption)  
- Shared key  
  WEP  
If your problem is not solved, the SSID or network settings you entered may be incorrect. Confirm the wireless network settings.  
For Ad-Hoc Mode, change the authentication and encryption methods of your computer for the wireless setting. Your machine supports Open authentication only, with optional WEP encryption. |
| TS-05      | The security information (SSID/Network Key) is incorrect.  
Confirm the SSID and Network Key. If your router uses WEP encryption, enter the key used as the first WEP key. Your Brother machine supports the use of the first WEP key only. |
| TS-06      | The wireless security information (Authentication method/Encryption method/Network Key) is incorrect.  
Confirm the wireless security information (Authentication method/Encryption method/Network Key) listed in TS-04. If your router uses WEP encryption, enter the key used as the first WEP key. Your Brother machine supports the use of the first WEP key only. |
| TS-07      | The machine cannot detect a WLAN access point/router that has WPS enabled.  
If you would like to connect with WPS, you must operate both your machine and the WLAN access point/router. Confirm the connection method for WPS on WLAN access point/router and try starting again.  
If you do not know how to operate your WLAN access point/router using WPS, see the documentation provided with your WLAN access point/router, ask the manufacturer of your WLAN access point/router or ask your network administrator. |
| TS-08      | Two or more WLAN access points that have WPS enabled are detected.  
- Confirm that only one WLAN access point/router within range has the WPS method active and try again.  
- Try starting again after few minutes in order to avoid effects from other access points. |

Your Brother machine employs some of the latest network security and encryption protocols available today. These network features can be integrated into your overall network security plan to help protect your data and prevent unauthorised access to the machine.

We recommend disabling the Telnet, FTP server and TFTP protocols. Accessing the machine using these protocols is not secure.

Secure Function Lock 3.0

Brother’s Secure Function Lock 3.0 increases security by restricting the functions available on your Brother machine.

- Before Using Secure Function Lock 3.0
- Configure Secure Function Lock 3.0 Using Web Based Management
- Configure Public Mode for Secure Function Lock 3.0
- Additional Secure Function Lock 3.0 Features
- Register a new ID Card Using Machine’s Control Panel
Use Secure Function Lock to configure passwords, set specific user page limits, and grant access to some or all of the functions listed here.

You can configure and change the following Secure Function Lock 3.0 settings using Web Based Management or BRAdmin Professional 3 (Windows®):

- **Print**
  
  Print includes print jobs sent via AirPrint, Google Cloud Print™ and Brother iPrint&Scan.
  
  If you register users' login names in advance, the users will not need to enter their passwords when they use the print function.

- **Page Limits**

- **Web Connect** (supported models only)

- **Apps** (supported models only)

- **Page Counters**

- **Card ID (NFC ID)** (supported models only)
  
  If you register users' Card IDs in advance, a registered user can activate the machine by touching his registered card to the machine's NFC logo.

- Secure Function Lock 3.0
Configure Secure Function Lock 3.0 Using Web Based Management

HL-L6400DW/HL-L6400DWT

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the
machine's IP address).
   For example:
   http://192.168.1.2
3. Click the Administrator tab.
4. Click the User Restriction Function menu in the left navigation bar.
5. Select Secure Function Lock.
6. Click Submit.
7. Click the Restricted Functions menu in the left navigation bar.
8. In the User List / Restricted Functions field, type a group name or user name (alphanumeric, up to 15
digits).
9. In the Print and the other columns, select a check box to allow or clear a check box to restrict the function
listed.
10. To configure the maximum page count, select the On check box in the Page Limits column, and then type
the maximum number in the Max. Pages field.
11. Click Submit.
12. Click the User List menu in the left navigation bar.
13. In the User List field, type the user name.
14. In the PIN Number field, type a four-digit password.
15. To register the user's Card ID, type the card number in the Card ID (NFC ID) field (Available only for certain
models).
16. Click the Output drop-down list, and then select the output tray for each user (Available only for certain
models).
17. Select User List / Restricted Functions from the drop-down list for each user.
18. Click Submit.

Related Information
- Secure Function Lock 3.0
- Assign a Mailbox Bin to a User or Group

Use the Secure Function Lock screen to set up Public Mode, which limits the functions available to public users. Public users will not need to enter a password to access the features made available through Public Mode settings.

Public Mode includes print jobs sent via AirPrint, Google Cloud Print™ and Brother iPrint&Scan.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   - For example: http://192.168.1.2
3. Click the Administrator tab.
4. Click the User Restriction Function menu in the left navigation bar.
5. Select Secure Function Lock.
6. Click Submit.
7. Click the Restricted Functions menu.
8. In the Public Mode row, select a check box to allow or clear a check box to restrict the function listed.
9. Click Submit.

Related Information

- Secure Function Lock 3.0
Configure the following features in the Secure Function Lock screen:

**All Counter Reset**
- Click **All Counter Reset**, in the **Page Counters** column, to reset the page counter.

**Export to CSV file**
- Click **Export to CSV file**, to export the current page counter including **User List / Restricted Functions** information as a CSV file.

**Card ID (NFC ID) (supported models only)**
- Click the **User List** menu, and then type a users’ Card ID in the **Card ID (NFC ID)** field. You can use your ID card for authentication.

**Output (available models only)**
- When the Mailbox unit is installed on your machine, select the output tray for each user from the drop-down list.

**Last Counter Record**
- Click **Last Counter Record** if you want the machine to retain the page count after the counter has been reset.

Use Active Directory® Authentication

• Introduction to Active Directory® Authentication

• Configure Active Directory® Authentication Using Web Based Management

• Log On to Change the Machine Settings Using the Machine's Control Panel (Active Directory® Authentication)
Active Directory® Authentication restricts the use of your Brother machine. If Active Directory® Authentication is enabled, the machine's control panel will be locked. You cannot change the machine's settings until you enter a User ID and password.

Active Directory® Authentication offers the following feature:

• Stores incoming print data

You can change the Active Directory® Authentication settings using Web Based Management or BRAdmin Professional 3 (Windows®).

Related Information

• Use Active Directory® Authentication
Configure Active Directory® Authentication Using Web Based Management

Active Directory® authentication supports Kerberos authentication and NTLMv2 authentication. You must configure the SNTP protocol (network time server) and DNS server configuration for authentication.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2
3. Click the Administrator tab.
4. Click the User Restriction Function menu in the left navigation bar.
5. Select Active Directory Authentication.
6. Click Submit.
7. Select Active Directory Authentication in the left navigation bar.
8. Configure the following settings:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Storage PC Print Data</td>
<td>Select this option to store incoming print data. After you log on to the machine, your PC print jobs will be printed automatically. This feature is available only for print data created by a Brother native printer driver.</td>
</tr>
<tr>
<td>Remember User ID</td>
<td>Select this option to save your User ID.</td>
</tr>
<tr>
<td>Active Directory Server Address</td>
<td>Type the IP address or the server name (for example: ad.example.com) of the Active Directory® Server.</td>
</tr>
<tr>
<td>Active Directory Domain Name</td>
<td>Type the Active Directory® domain name.</td>
</tr>
<tr>
<td>Protocol &amp; Authentication Method</td>
<td>Select the protocol and authentication method.</td>
</tr>
<tr>
<td>LDAP Server Port</td>
<td>Type the LDAP server port number (available only for LDAP + kerberos authentication method).</td>
</tr>
</tbody>
</table>

9. Click Submit.

Related Information

- Use Active Directory® Authentication
When Active Directory® Authentication is enabled, the machine's control panel will be locked until you enter your User ID and password on the machine's control panel.

1. On the machine's control panel, enter your User ID.
2. Press [Login].
3. Enter your password.
4. Press [OK].
5. When authentication is successful, the machine's control panel will be unlocked.

Manage Your Network Machine Securely Using SSL/TLS

- Introduction to SSL/TLS
- Certificates and Web Based Management
- Manage Your Network Machine Securely Using Web Based Management
- Manage Your Network Machine Securely Using BRAdmin Professional 3 (Windows®)
- Print Documents Securely Using SSL/TLS
Secure Socket Layer (SSL) or Transport Layer Security (TLS) is an effective method of protecting data sent over a local or wide area network (LAN or WAN). It works by encrypting data, such as a print job, sent over a network, so anyone trying to capture it will not be able to read it.

SSL/TLS can be configured on both wired and wireless networks and will work with other forms of security such as WPA keys and firewalls.

**Related Information**

- Manage Your Network Machine Securely Using SSL/TLS
- Brief History of SSL/TLS
- Benefits of Using SSL/TLS
Brief History of SSL/TLS

SSL/TLS was originally created to secure web traffic information, particularly data sent between web browsers and servers. For example, when you use Internet Explorer® for Internet Banking and you see https:// and the little padlock icon in the web browser, you are using SSL. SSL grew to work with additional applications, such as Telnet, printer, and FTP software, in order to become a universal solution for online security. Its original design intentions are still being used today by many online retailers and banks to secure sensitive data, such as credit card numbers, customer records, etc.

SSL/TLS uses extremely high levels of encryption and is trusted by banks all over the world.

Related Information

- Introduction to SSL/TLS

Benefits of Using SSL/TLS

The primary benefit of using SSL/TLS on Brother machines is to guarantee secure printing over an IP network by restricting unauthorised users from reading data sent to the machine. SSL’s key selling point is that it can be used to print confidential data securely. For example, an HR department in a large company may be printing wage slips on a regular basis. Without encryption, the data contained on these wages slips can be read by other network users. However, with SSL/TLS, anyone trying to capture the data will see a confusing page of code and not the actual wage slip.

Related Information

- Introduction to SSL/TLS
You must configure a certificate to manage your networked Brother machine securely using SSL/TLS. You must use Web Based Management to configure a certificate.

- Supported Security Certificate Features
- Create and Install a Certificate
- Manage Multiple Certificates
Your Brother machine supports the use of multiple security certificates, which allows secure management, authentication, and communication with the machine. The following security certificate features can be used with the machine:

- SSL/TLS communication
- SSL communication for SMTP
- IEEE 802.1x authentication
- IPsec

The Brother machine supports the following:

- Pre-installed certificate
  Your machine has a pre-installed self-signed certificate. This certificate enables you to use SSL/TLS communication without creating or installing a different certificate.

The pre-installed self-signed certificate cannot protect your communication from being compromised. We recommend using a certificate that is issued by a trusted organization for better security.

- Self-signed certificate
  This print server issues its own certificate. Using this certificate, you can easily use the SSL/TLS communication without creating or installing a different certificate from a CA.

- Certificate from a Certificate Authority (CA)
  There are two methods for installing a certificate from a CA. If you already have a certificate from a CA or if you want to use a certificate from an external trusted CA:
  - When using a Certificates Signing Request (CSR) from this print server.
  - When importing a certificate and a private key.

- Certificate Authority (CA) Certificate
  To use a CA certificate that identifies the CA and owns its private key, you must import that CA certificate from the CA before configuring the security features of the Network.

- If you are going to use SSL/TLS communication, we recommend contacting your system administrator first.
- When you reset the print server back to its default factory settings, the certificate and the private key that are installed will be deleted. If you want to keep the same certificate and the private key after resetting the print server, export them before resetting, and then reinstall them.

Create and Install a Certificate

- Step by Step Guide for Creating and Installing a Certificate
- Create and Install a Self-signed Certificate
- Create and Install a Certificate from a Certificate Authority (CA)
- Import and Export a CA Certificate
Step by Step Guide for Creating and Installing a Certificate

There are two options when choosing a security certificate: use a self-signed certificate or use a certificate from a Certificate Authority (CA).

These are a brief summary of the actions required, based on the option you choose.

**Option 1**

Self-Signed Certificate

1. Create a self-signed certificate using Web Based Management.
2. Install the self-signed certificate on your computer.

**Option 2**

Certificate from a CA

1. Create a Certificate Signing Request (CSR) using Web Based Management.
2. Install the certificate issued by the CA on your Brother machine using Web Based Management.
3. Install the certificate on your computer.

**Related Information**

- Create and Install a Certificate
Create and Install a Self-signed Certificate

- Create a Self-signed Certificate
- Install the Self-signed Certificate for Windows® users with Administrator Rights
- Import and Export the Self-signed Certificate on your Brother Machine
Create a Self-signed Certificate

1. Start your web browser.
2. Type "http://machine’s IP address" in your browser’s address bar (where "machine’s IP address" is the machine’s IP address).
   For example:
   http://192.168.1.2

   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxx
       The NetBIOS name can be found in the Network Configuration Report.
   • For Macintosh, access Web Based Management by clicking the machine’s icon on the Status Monitor screen.

3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Create Self-Signed Certificate.
8. Enter a Common Name and a Valid Date.
   • The length of the Common Name is less than 64 bytes. Enter an identifier, such as an IP address, node name, or domain name to use when accessing this machine through SSL/TLS communication. The node name is displayed by default.
   • A warning will appear if you use the IPPS or HTTPS protocol and enter a different name in the URL than the Common Name that was used for the self-signed certificate.
9. Select your setting from the Public Key Algorithm drop-down list. The default setting is RSA(2048bit).
10. Select your setting from the Digest Algorithm drop-down list. The default setting is SHA256.
11. Click Submit.
12. Click Network.
13. Click Protocol.
14. Click HTTP Server Settings.
15. Select the certificate you want to configure from the Select the Certificate drop-down list.
16. Click Submit.
   The following screen appears.
17. Click **Yes** to restart your print server.

The self-signed certificate is created and saved in your machine’s memory.

To use SSL/TLS communication, the self-signed certificate must be installed on your computer.

**Related Information**

- Create and Install a Self-signed Certificate
Install the Self-signed Certificate for Windows® users with Administrator Rights

The following steps are for Microsoft® Internet Explorer®. If you use another web browser, consult the documentation for your web browser to get help with installing certificates.

1. Do one of the following:
   - (Windows® XP and Windows Server® 2003) Start your web browser, and then go to step 3.
   - (Windows Vista®, Windows® 7, Windows Server® 2008)
     Click (Start) > All Programs.
   - (Windows® 8)
     Right-click the (Internet Explorer) icon on the taskbar.
   - (Windows Server® 2012 and Windows Server® 2012 R2)
     Click (Internet Explorer), and then right-click the (Internet Explorer) icon that appears on the taskbar.

2. Right-click Internet Explorer, and then click Run as administrator.

   ![Image of Run as administrator dialog]

   If the User Account Control screen appears,
   - (Windows Vista®) Click Continue (Allow).
   - (Windows® 7/Windows® 8) Click Yes.

3. Type "https://machine's IP address/" in your browser's address bar to access your machine (where "machine's IP address" is the machine's IP address or the node name that you assigned for the certificate).
4. Click **Continue to this website (not recommended)**.

5. Click **Certificate Error**, and then click **View certificates**.

(Windows® XP and Windows Server® 2003)

When the following dialog box appears, click **View Certificate**, and then go to step 6.
6. Click **Install Certificate**.

7. When the **Certificate Import Wizard** appears, click **Next**.

8. Select **Place all certificates in the following store**, and then click **Browse**.
9. Select **Trusted Root Certification Authorities**, and then click **OK**.

![Select Certificate Store](image)

10. Click **Next**.

![Certificate Import Wizard](image)

11. Click **Finish**.

12. Click **Yes**, if the fingerprint (thumbprint) is correct.

![Security Warning](image)

The fingerprint (thumbprint) is printed on the Network Configuration Report.

13. Click **OK**.

The self-signed certificate is now installed on your computer, and SSL/TLS communication is available.

**Related Information**

- [Create and Install a Self-signed Certificate](#)
You can store the self-signed certificates on your Brother machine and manage them by importing and exporting.

- Import the Self-signed Certificate
- Export the Self-signed Certificate
1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

   - If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
       If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxx
       The NetBIOS name can be found in the Network Configuration Report.

3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Import Certificate and Private Key.
8. Browse to the file you want to import.
9. Type the password if the file is encrypted, and then click Submit.

The self-signed certificate is imported to your machine.

To use SSL/TLS communication, the self-signed certificate must also be installed on your computer. Contact your network administrator.

- Import and Export the Self-signed Certificate on your Brother Machine
1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

- If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
  - For example:
    http://SharedPrinter
  If you enable a NetBIOS name, you can also use the node name.
  - For example:
    http://brnxxxxxxxxxxxx
    The NetBIOS name can be found in the Network Configuration Report.

- For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.

3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Export.
8. If you want to encrypt the file, type a password in the Enter Password field.
   If the Enter Password field is blank, your output file will not be encrypted.
9. Type the password again in the Retype Password field, and then click Submit.
10. Specify the location where you want to save the file.

The self-signed certificate is exported to your computer.

You can also import the self-signed certificate to your computer.

Related Information

- Import and Export the Self-signed Certificate on your Brother Machine
Create and Install a Certificate from a Certificate Authority (CA)

If you already have a certificate from an external trusted CA, you can store the certificate and private key on the machine and manage them by importing and exporting. If you do not have a certificate from an external trusted CA, create a Certificate Signing Request (CSR), send it to a CA for authentication, and install the returned certificate on your machine.

• Create a Certificate Signing Request (CSR)
• Install a Certificate on Your Brother Machine
• Import and Export the Certificate and Private Key
Create a Certificate Signing Request (CSR)

A Certificate Signing Request (CSR) is a request sent to a Certificate Authority (CA) to authenticate the credentials contained within the certificate.

We recommend installing a Root Certificate from the CA on your computer before creating the CSR.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
   - If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://bnxxxxxxxxxxx
       The NetBIOS name can be found in the Network Configuration Report.
   - For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.
3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Create CSR.
8. Type a Common Name (required) and add other information about your Organization (optional).
   - Your company details are required so that a CA can confirm your identity and verify it to the outside world.
   - The length of the Common Name must be less than 64 bytes. Enter an identifier, such as an IP address, node name, or domain name to use when accessing this printer through SSL/TLS communication. The node name is displayed by default. The Common Name is required.
   - A warning will appear if you type a different name in the URL than the Common Name that was used for the certificate.
   - The length of the Organization, the Organization Unit, the City/Locality and the State/Province must be less than 64 bytes.
   - The Country/Region should be a two character ISO 3166 country code.
   - If you are configuring an X.509v3 certificate extension, select the Configure extended partition check box, and then select Auto (Register IPv4) or Manual.
9. Select your setting from the Public Key Algorithm drop-down list. The default setting is RSA(2048bit).
10. Select your setting from the Digest Algorithm drop-down list. The default setting is SHA256.
11. Click Submit.
The CSR appears on your screen. Save the CSR as a file or copy and paste it into an online CSR form offered by a Certificate Authority.

12. Click **Save**.

- Follow your CA's policy regarding the method to send a CSR to your CA.
- If you are using the Enterprise root CA of Windows Server® 2003/2008/2012/2012 R2, we recommend using the Web Server for the certificate template to securely create the Client Certificate. If you are creating a Client Certificate for an IEEE 802.1x environment with EAP-TLS authentication, we recommend using User for the certificate template. For more information, go to your model's page on the Brother Solutions Center at support.brother.com.

**Related Information**

- Create and Install a Certificate from a Certificate Authority (CA)
When you receive a certificate from a CA, follow the steps below to install it into the print server:

Only a certificate issued with your machine's CSR can be installed onto the machine. When you want to create another CSR, make sure that the certificate is installed before creating another CSR. Create another CSR only after installing the certificate on the machine. If you do not, the CSR you create before installing will be invalid.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   • For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.
3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Install Certificate.
8. Browse to the file that contains the certificate issued by the CA, and then click Submit.
    The certificate has been created successfully and saved in your machine's memory successfully.
To use SSL/TLS communication, the Root Certificate from the CA must be installed on your computer. Contact your network administrator.

Related Information

- Create and Install a Certificate from a Certificate Authority (CA)
Import and Export the Certificate and Private Key

Store the certificate and private key on your machine and manage them by importing and exporting them.

- Import a Certificate and Private Key
- Export the Certificate and Private Key
1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
   - If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
   - For example:
     http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
   - For example:
     http://brnxxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   - For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.
3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Import Certificate and Private Key.
8. Browse to the file you want to import.
9. Type the password if the file is encrypted, and then click Submit.

The certificate and private key are imported to your machine.

To use SSL/TLS communication, the Root Certificate from the CA must also be installed on your computer. Contact your network administrator.

**Related Information**

- Import and Export the Certificate and Private Key
1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   • For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.

3. No password is required by default. Type a password if you have set one, and then click
4. Click the Network tab.
5. Click Security.
6. Click Certificate.
7. Click Export shown with Certificate List.
8. Enter the password if you want to encrypt the file.
   If a blank password is used, the output is not encrypted.
9. Enter the password again for confirmation, and then click Submit.
10. Specify the location where you want to save the file.

The certificate and private key are exported to your computer.

You can also import the certificate to your computer.
Import and Export a CA Certificate

You can import, export and store CA certificates on your Brother machine.

- Import a CA Certificate
- Export a CA Certificate
Import a CA Certificate

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:  
   `http://192.168.1.2`

3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Network tab.
5. Click Security.
6. Click CA Certificate.
7. Click Import CA Certificate and select the certificate.
8. Click Submit.

Related Information

- Import and Export a CA Certificate
Export a CA Certificate

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address). For example:
   http://192.168.1.2
   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxxx
       The NetBIOS name can be found in the Network Configuration Report.
3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Network tab.
5. Click Security.
6. Click CA Certificate.
7. Select the certificate you want to export and click Export.
8. Click Submit.
9. Click Save.
10. Specify where on your computer you want to save the exported certificate, and save it.

Related Information

• Import and Export a CA Certificate
Manage Multiple Certificates

The multiple certificate feature allows you to use Web Based Management to manage each certificate installed on your machine. In Web Based Management, navigate to the Certificate or CA Certificate screen to view certificate content, delete, or export your certificates.

<table>
<thead>
<tr>
<th>Maximum Number of Certificates Stored UP on Brother Machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-signed Certificate or Certificate Issued by a CA</td>
</tr>
<tr>
<td>CA Certificate</td>
</tr>
</tbody>
</table>

We recommend storing one less certificate than allowed, reserving an empty spot in case of certificate expiration. When a certificate expires, import a new certificate into the reserved spot, and then delete the expired certificate. This ensures that you avoid configuration failure.

- When you use HTTPS/IPPS, or IEEE 802.1x, you must select which certificate you are using.
- When you use SSL for SMTP communications, you do not have to choose the certificate. The necessary certificate will be chosen automatically.

Related Information

- Certificates and Web Based Management
To manage your network machine securely, you must use management utilities with security protocols.

We recommend using the HTTPS protocol for secure management. To use this protocol, HTTPS must be enabled on your machine.

- The HTTPS protocol is enabled by default.
- You can change the HTTPS protocol settings using the Web Based Management screen.
  1. Click the **Network** tab.
  2. Click the **Protocol** menu in the left navigation bar.
  3. Click **HTTP Server Settings**.

1. Start your web browser.
2. Type "https://Common Name" in your browser's address bar (where "Common Name" is the Common Name that you assigned to the certificate; this could be your IP address, node name, or domain name).
3. No password is required by default. Type a password if you have set one, and then click ➡.
4. You can now access the machine using HTTPS.

- If you use the SNMPv3 protocol, follow the steps below.
  - You can also change the SNMP settings by using BRAdmin Professional 3.

5. Click the **Network** tab.
6. Click **Protocol**.
7. Make sure the **SNMP** setting is enabled, and then click **Advanced Settings**.
8. Configure the SNMP settings.

### SNMP

<table>
<thead>
<tr>
<th>Status</th>
<th>Enabled</th>
</tr>
</thead>
</table>

**SNMP Mode of Operation**

- SNMP v1/v2c read-write access
- SNMPv3 read-write access and v1/v2c read-only access
- SNMPv3 read-write access

[Cancel] [Submit]
There are three options for **SNMP Mode of Operation**.

- **SNMP v1/v2c read-write access**
  In this mode, the print server uses version 1 and version 2c of the SNMP protocol. You can use all Brother applications in this mode. However, it is not secure since it will not authenticate the user, and data will not be encrypted.

- **SNMPv3 read-write access and v1/v2c read-only access**
  In this mode, the print server uses the read-write access of version 3 and the read-only access of version 1 and version 2c of the SNMP protocol.

  When you use **SNMPv3 read-write access and v1/v2c read-only access** mode, some Brother applications (such as BRAdmin Light) that access the print server do not work correctly since they authorize the read-only access of version 1 and version 2c. If you want to use all applications, we recommend using **SNMP v1/v2c read-write access** mode.

- **SNMPv3 read-write access**
  In this mode, the print server uses version 3 of the SNMP protocol. If you want to manage the print server securely, use this mode.

  When you use **SNMPv3 read-write access** mode, note the following:
  - You can use only BRAdmin Professional 3 or Web Based Management to manage the print server.
  - Except for BRAdmin Professional 3, all applications that use SNMPv1/v2c will be restricted. To allow the use of SNMPv1/v2c applications, use **SNMPv3 read-write access and v1/v2c read-only access** or **SNMP v1/v2c read-write access** mode.

**Related Information**

- **Manage Your Network Machine Securely Using SSL/TLS**
To use BRAdmin Professional 3 utility, you must:

- Use the latest version of BRAdmin Professional 3. Go to your model's Downloads page on the Brother Solutions Center at support.brother.com. If you use an older version of BRAdmin to manage your Brother machines, the user authentication will not be secure.
- Use Web Based Management with the HTTPS protocol if you use BRAdmin Professional 3 and Web Based Management together.
- Use a different password in each group if you are managing a mixed group of older and newer print servers with BRAdmin Professional 3. This will ensure security is maintained on the newer print servers.

- "Older versions of BRAdmin" refer to BRAdmin Professional older than Ver. 2.80 and BRAdmin Light for Macintosh older than Ver.1.10.
- "Older print servers" refer to NC-2000 series, NC-2100p, NC-3100h, NC-3100s, NC-4100h, NC-5100h, NC-5200h, NC-6100h, NC-6200h, NC-6300h, NC-6400h, NC-8000, NC-100h, NC-110h, NC-120w, NC-130h, NC-140w, NC-8100h, NC-9100h, NC-7100w, NC-7200w and NC-2200w.

Related Information

- Manage Your Network Machine Securely Using SSL/TLS
To print documents securely with IPP protocol, use the IPPS protocol.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   
   
   http://192.168.1.2

   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   • For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.

3. No password is required by default. Type a password if you have set one, and then click a.
4. Click the Network tab.
5. Click Protocol. Make sure the IPP check box is selected.
   
   If the IPP check box is not selected, select the IPP check box, and then click Submit.
   Restart your machine to activate the configuration.
   After the machine restarts, return to the machine's web page, click the Network tab, and then click Protocol.
6. Click HTTP Server Settings.
7. Select the HTTPS(Port443) check box, and then click Submit.
8. Restart your machine to activate the configuration.

Communication using IPPS cannot prevent unauthorised access to the print server.

- Configure an IPsec Template Using Web Based Management
Introduction to IPsec

IPsec (Internet Protocol Security) is a security protocol that uses an optional Internet Protocol function to prevent manipulation and ensure the confidentiality of data transmitted as IP packets. IPsec encrypts data carried over the network, such as print data sent from computers to a printer. Because the data is encrypted at the network layer, applications that employ a higher-level protocol use IPsec even if the user is not aware of its use.

IPsec supports the following functions:

• IPsec transmissions
  According to the IPsec setting conditions, the network-connected computer sends data to and receives data from the specified device using IPsec. When the devices start communicating using IPsec, keys are exchanged using Internet Key Exchange (IKE) first, and then the encrypted data is transmitted using the keys.
  In addition, IPsec has two operation modes: the Transport mode and Tunnel mode. The Transport mode is used mainly for communication between devices and the Tunnel mode is used in environments such as a Virtual Private Network (VPN).

• IPsec settings
  The settings that are necessary for connections using IPsec. These settings can be configured using Web Based Management.

To configure the IPsec settings, you must use the browser on a computer that is connected to the network.

Related Information

• Manage Your Network Machine Securely Using IPsec
The IPsec connection conditions are comprised of two Template types: Address and IPsec. You can configure up to 10 connection conditions.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click the IPsec menu in the left navigation bar.
7. In the Status field, enable or disable IPsec.
8. Select **Negotiation Mode** for IKE Phase 1.

IKE is a protocol that is used to exchange encryption keys in order to carry out encrypted communication using IPsec.

In **Main** mode, the processing speed is slow, but the security is high. In **Aggressive** mode, the processing speed is faster than **Main** mode, but the security is lower.

9. In the **All Non-IPsec Traffic** field, select the action to be taken for non-IPsec packets.

When using Web Services, you must select **Allow** for **All Non-IPsec Traffic**. If you select **Drop**, Web Services cannot be used.

10. In the **Broadcast/Multicast Bypass** field, select **Enabled** or **Disabled**.

11. In the **Protocol Bypass** field, select the check box for the option or options you want.

12. In the **Rules** table, select the **Enabled** check box to activate the template.

When you select multiple check boxes, the lower numbered check boxes have priority if the settings for the selected check boxes conflict.

13. Click on the corresponding drop-down list to select the **Address Template** that is used for the IPsec connection conditions.

To add an **Address Template**, click **Add Template**.

14. Click on the corresponding drop-down list to select the **IPsec Template** that is used for the IPsec connection conditions.

To add an **IPsec Template**, click **Add Template**.

15. Click **Submit**.

If the computer must be restarted to register the new settings, the restart confirmation screen will appear.

If there is a blank item in the template you enabled in the **Rules** table, an error message appears. Confirm your choices and submit again.

---

**Related Information**

- Manage Your Network Machine Securely Using IPsec
1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2
3. No password is required by default. Type a password if you have set one, and then click.
4. Click the Network tab.
5. Click Security.
6. Click the IPsec Address Template menu in the left navigation bar.
   The Template List appears, displaying 10 Address Templates.
   Click the Delete button to delete an Address Template. When an Address Template is in use, it cannot be deleted.
7. Click the Address Template that you want to create. The IPsec Address Template appears.
8. In the Template Name field, type a name for the template (up to 16 characters).
9. Select a Local IP Address option to specify the IP address conditions for the sender:
   - IP Address
     Specify the IP address. Select ALL IPv4 Address, ALL IPv6 Address, All Link Local IPv6, or Custom from the drop-down list.
     If you select Custom from the drop-down list, type the IP address (IPv4 or IPv6) in the text box.
   - IP Address Range
     Type the starting and ending IP addresses for the IP address range in the text boxes. If the starting and ending IP addresses are not standardized to IPv4 or IPv6, or the ending IP address is smaller than the starting address, an error will occur.
• **IP Address / Prefix**
  Specify the IP address using CIDR notation.
  For example: 192.168.1.1/24
  Because the prefix is specified in the form of a 24-bit subnet mask (255.255.255.0) for 192.168.1.1, the addresses 192.168.1.xxx are valid.

10. Select a **Remote IP Address** option to specify the IP address conditions for the recipient:

  - **Any**
    If you select **Any**, all IP addresses are enabled.

  - **IP Address**
    Type the specified IP address (IPv4 or IPv6) in the text box.

  - **IP Address Range**
    Type the starting and ending IP addresses for the IP address range. If the starting and ending IP addresses are not standardized to IPv4 or IPv6, or the ending IP address is smaller than the starting address, an error will occur.

  - **IP Address / Prefix**
    Specify the IP address using CIDR notation.
    For example: 192.168.1.1/24
    Because the prefix is specified in the form of a 24-bit subnet mask (255.255.255.0) for 192.168.1.1, the addresses 192.168.1.xxx are valid.

11. Click **Submit**.

When you change the settings for the template currently in use, the IPsec screen in Web Based Management will close and open again.

**Related Information**

• **Manage Your Network Machine Securely Using IPsec**
1. Start your web browser.

2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

3. No password is required by default. Type a password if you have set one, and then click.

4. Click the Network tab.

5. Click Security.

6. Click IPsec Template in the left navigation bar.
   The Template List appears, displaying 10 IPsec Templates.
   Click the Delete button to delete an IPsec Template. When an IPsec Template is in use, it cannot be deleted.

7. Click IPsec Template that you want to create. The IPsec Template screen appears. The configuration fields differ based on the Use Prefixed Template and Internet Key Exchange (IKE) you select.

8. In the Template Name field, type a name for the template (up to 16 characters).

9. Select the Internet Key Exchange (IKE) options.

10. Click Submit.
IPsec Template 1

Template Name: 

Use Prefixed Template: IKEv1 High Security

Internet Key Exchange (IKE) IKEv1

Authentication Type
- Diffie-Hellman Group: Group14
- Encryption: AES-CBC 128, AES-CBC 256
- Hash: SHA1, SHA256, SHA384
- SA Lifetime: 28800 seconds (720000)

Encapsulating Security
- Protocol: ESP
- Encryption: AES-CBC 128, AES-CBC 256
- Hash: SHA1, SHA256, SHA384
- SA Lifetime: 5000 seconds (0.4375 days)
- Encapsulation Mode: Transport
- Remote Router IP Address:

- Manage Your Network Machine Securely Using IPsec
- IKEv1 Settings for an IPsec Template
- IKEv2 Settings for an IPsec Template
- Manual Settings for an IPsec Template
IKEv1 Settings for an IPsec Template

Template Name
Type a name for the template (up to 16 characters).

Use Prefixed Template
Select Custom, IKEv1 High Security or IKEv1 Medium Security. The setting items are different depending on the selected template.

The default template differs depending on whether you chose Main or Aggressive for Negotiation Mode on the IPsec configuration screen.

Internet Key Exchange (IKE)
IKE is a communication protocol that is used to exchange encryption keys in order to carry out encrypted communication using IPsec. To carry out encrypted communication for that time only, the encryption algorithm that is necessary for IPsec is determined and the encryption keys are shared. For IKE, the encryption keys are exchanged using the Diffie-Hellman key exchange method, and encrypted communication that is limited to IKE is carried out.

If you selected Custom in Use Prefixed Template, select IKEv1.

Authentication Type
Configure the IKE authentication and encryption.

- **Diffie-Hellman Group**
  This key exchange method allows secret keys to be securely exchanged over an unprotected network. The Diffie-Hellman key exchange method uses a discrete logarithm problem, not the secret key, to send and receive open information that was generated using a random number and the secret key.
  Select Group1, Group2, Group5, or Group14.

- **Encryption**
  Select DES, 3DES, AES-CBC 128, or AES-CBC 256.

- **Hash**
  Select MD5, SHA1, SHA256, SHA384 or SHA512.

- **SA Lifetime**
  Specify the IKE SA lifetime.
  Type the time (seconds) and number of kilobytes (KByte).

Encapsulating Security

- **Protocol**
  Select ESP, AH+ESP or AH.

ESP is a protocol for carrying out encrypted communication using IPsec. ESP encrypts the payload (communicated contents) and adds additional information. The IP packet is comprised of the header and the encrypted payload, which follows the header. In addition to the encrypted data, the IP packet also includes information regarding the encryption method and encryption key, the authentication data, and so on.

- AH is part of the IPsec protocol that authenticates the sender and prevents manipulation (ensures the completeness) of the data. In the IP packet, the data is inserted immediately after the header. In addition, the packets include hash values, which are calculated using an equation from the communicated contents, secret key, and so on, in order to prevent the falsification of the sender and manipulation of the data. Unlike ESP, the communicated contents are not encrypted, and the data is sent and received as plain text.

- **Encryption**
  Select DES, 3DES, AES-CBC 128, or AES-CBC 256. The encryption can be selected only when ESP is selected in Protocol.

- **Hash**
  Select None, MD5, SHA1, SHA256, SHA384, or SHA512. None can be selected only when ESP is selected in Protocol.
When AH+ESP is selected in Protocol, select each protocol for Hash(AH) and Hash(ESP).

• **SA Lifetime**
  Specify the IPsec SA lifetime.
  Type the time (seconds) and number of kilobytes (KByte) before the IPsec SA will expire.

• **Encapsulation Mode**
  Select Transport or Tunnel.

• **Remote Router IP-Address**
  Type the IP address (IPv4 or IPv6) of the remote router. Enter this information only when the Tunnel mode is selected.

SA (Security Association) is an encrypted communication method using IPsec or IPv6 that exchanges and shares information, such as the encryption method and encryption key, in order to establish a secure communication channel before communication begins. SA may also refer to a virtual encrypted communication channel that has been established. The SA used for IPsec establishes the encryption method, exchanges the keys, and carries out mutual authentication according to the IKE (Internet Key Exchange) standard procedure. In addition, the SA is updated periodically.

**Perfect Forward Secrecy (PFS)**
PFS does not derive keys from previous keys that were used to encrypt messages. In addition, if a key that is used to encrypt a message was derived from a parent key, that parent key is not used to derive other keys. Therefore, even if a key is compromised, the damage will be limited only to the messages that were encrypted using that key.
Select Enabled or Disabled.

**Authentication Method**
Select the authentication method. Select Pre-Shared Key or Certificates.

**Pre-Shared Key**
When encrypting communication, the encryption key is exchanged and shared beforehand using another channel.
If you selected Pre-Shared Key for the Authentication Method, type the Pre-Shared Key (up to 32 characters).

• **Local/ID Type/ID**
  Select the sender's ID type, and then type the ID.
  Select IPv4 Address, IPv6 Address, FQDN, E-mail Address, or Certificate for the type.
  If you select Certificate, type the common name of the certificate in the ID field.

• **Remote/ID Type/ID**
  Select the recipient's ID type, and then type the ID.
  Select IPv4 Address, IPv6 Address, FQDN, E-mail Address, or Certificate for the type.
  If you select Certificate, type the common name of the certificate in the ID field.

**Certificates**
If you selected Certificates for Authentication Method, select the certificate.

You can select only the certificates that were created using the Certificate page of Web Based Management's Security configuration screen.

Internet Key Exchange (IKE)
IKE is a communication protocol that is used to exchange encryption keys in order to carry out encrypted communication using IPsec. To carry out encrypted communication for that time only, the encryption algorithm that is necessary for IPsec is determined and the encryption keys are shared. For IKE, the encryption keys are exchanged using the Diffie-Hellman key exchange method, and encrypted communication that is limited to IKE is carried out.

If you selected Custom in Use Prefixed Template, select IKEv2.

Authentication Type
Configure the IKE authentication and encryption.

- Diffie-Hellman Group
  This key exchange method allows secret keys to be securely exchanged over an unprotected network. The Diffie-Hellman key exchange method uses a discrete logarithm problem, not the secret key, to send and receive open information that was generated using a random number and the secret key.
  Select Group1, Group2, Group5, or Group14.

- Encryption
  Select DES, 3DES, AES-CBC 128, or AES-CBC 256.

- Hash
  Select MD5, SHA1, SHA256, SHA384 or SHA512.

- SA Lifetime
  Specify the IKE SA lifetime.
  Type the time (seconds) and number of kilobytes (KByte).

Encapsulating Security

- Protocol
  Select ESP.

ESP is a protocol for carrying out encrypted communication using IPsec. ESP encrypts the payload (communicated contents) and adds additional information. The IP packet is comprised of the header and the encrypted payload, which follows the header. In addition to the encrypted data, the IP packet also includes information regarding the encryption method and encryption key, the authentication data, and so on.

- Encryption
  Select DES, 3DES, AES-CBC 128, or AES-CBC 256.

- Hash
  Select MD5, SHA1, SHA256, SHA384, or SHA512.

- SA Lifetime
  Specify the IPsec SA lifetime.
  Type the time (seconds) and number of kilobytes (KByte) before the IPsec SA will expire.

- Encapsulation Mode
  Select Transport or Tunnel.

- Remote Router IP-Address
  Type the IP address (IPv4 or IPv6) of the remote router. Enter this information only when the Tunnel mode is selected.
SA (Security Association) is an encrypted communication method using IPsec or IPv6 that exchanges and shares information, such as the encryption method and encryption key, in order to establish a secure communication channel before communication begins. SA may also refer to a virtual encrypted communication channel that has been established. The SA used for IPsec establishes the encryption method, exchanges the keys, and carries out mutual authentication according to the IKE (Internet Key Exchange) standard procedure. In addition, the SA is updated periodically.

Perfect Forward Secrecy (PFS)

PFS does not derive keys from previous keys that were used to encrypt messages. In addition, if a key that is used to encrypt a message was derived from a parent key, that parent key is not used to derive other keys. Therefore, even if a key is compromised, the damage will be limited only to the messages that were encrypted using that key.

Select Enabled or Disabled.

Authentication Method

Select the authentication method. Select Pre-Shared Key, Certificates, EAP - MD5, or EAP - MS-CHAPv2.

Pre-Shared Key

When encrypting communication, the encryption key is exchanged and shared beforehand using another channel.

If you selected Pre-Shared Key for the Authentication Method, type the Pre-Shared Key (up to 32 characters).

- Local/ID Type/ID
  Select the sender's ID type, and then type the ID.
  Select IPv4 Address, IPv6 Address, FQDN, E-mail Address, or Certificate for the type.
  If you select Certificate, type the common name of the certificate in the ID field.

- Remote/ID Type/ID
  Select the recipient's ID type, and then type the ID.
  Select IPv4 Address, IPv6 Address, FQDN, E-mail Address, or Certificate for the type.
  If you select Certificate, type the common name of the certificate in the ID field.

Certificates

If you selected Certificates for Authentication Method, select the certificate.

You can select only the certificates that were created using the Certificate page of Web Based Management's Security configuration screen.

EAP

EAP is an authentication protocol that is an extension of PPP. By using EAP with IEEE802.1x, a different key is used for user authentication during each session.

The following settings are necessary only when EAP - MD5 or EAP - MS-CHAPv2 is selected in Authentication Method:

- Mode
  Select Server-Mode or Client-Mode.

- Certificate
  Select the certificate.

- User Name
  Type the user name (up to 32 characters).

- Password
  Type the password (up to 32 characters). The password must be entered two times for confirmation.

- Certificate
  Click this button to move to the Certificate configuration screen.
Related Information

- Configure an IPsec Template Using Web Based Management
Manual Settings for an IPsec Template

Template Name
Type a name for the template (up to 16 characters).

Use Prefixed Template
Select Custom.
Internet Key Exchange (IKE)

IKE is a communication protocol that is used to exchange encryption keys in order to carry out encrypted communication using IPsec. To carry out encrypted communication for that time only, the encryption algorithm that is necessary for IPsec is determined and the encryption keys are shared. For IKE, the encryption keys are exchanged using the Diffie-Hellman key exchange method, and encrypted communication that is limited to IKE is carried out.

Select Manual.

Authentication Key (ESP,AH)

Specify the key to use for authentication. Type the In/Out values.

These settings are necessary when Custom is selected for Use Prefixed Template, Manual is selected for IKE, and a setting other than None is selected for Hash for Encapsulating Security section.

The number of characters you can set differs depending on the setting you chose for Hash in the Encapsulating Security section.

If the length of the specified authentication key is different than the selected hash algorithm, an error will occur.

- **MD5**: 128 bits (16 bytes)
- **SHA1**: 160 bits (20 bytes)
- **SHA256**: 256 bits (32 bytes)
- **SHA384**: 384 bits (48 bytes)
- **SHA512**: 512 bits (64 bytes)

When you specify the key in ASCII Code, enclose the characters in double quotation marks (").

Code key (ESP)

Specify the key to use for encryption. Type the In/Out values.

These settings are necessary when Custom is selected in Use Prefixed Template, Manual is selected in IKE, and ESP is selected in Protocol in Encapsulating Security.

The number of characters you can set differs depending on the setting you chose for Encryption in the Encapsulating Security section.

If the length of the specified code key is different than the selected encryption algorithm, an error will occur.

- **DES**: 64 bits (8 bytes)
- **3DES**: 192 bits (24 bytes)
- **AES-CBC 128**: 128 bits (16 bytes)
- **AES-CBC 256**: 256 bits (32 bytes)

When you specify the key in ASCII Code, enclose the characters in double quotation marks (").

SPI

These parameters are used to identify security information. Generally, a host has multiple Security Associations (SAs) for several types of IPsec communication. Therefore, it is necessary to identify the applicable SA when an IPsec packet is received. The SPI parameter, which identifies the SA, is included in the Authentication Header (AH) and Encapsulating Security Payload (ESP) header.

These settings are necessary when Custom is selected for Use Prefixed Template, and Manual is selected for IKE.

Enter the In/Out values. (3-10 characters)

Encapsulating Security

- **Protocol**
  
  Select ESP or AH.
- ESP is a protocol for carrying out encrypted communication using IPsec. ESP encrypts the payload (communicated contents) and adds additional information. The IP packet is comprised of the header and the encrypted payload, which follows the header. In addition to the encrypted data, the IP packet also includes information regarding the encryption method and encryption key, the authentication data, and so on.

- AH is part of the IPsec protocol that authenticates the sender and prevents manipulation of the data (ensures the completeness of the data). In the IP packet, the data is inserted immediately after the header. In addition, the packets include hash values, which are calculated using an equation from the communicated contents, secret key, and so on, in order to prevent the falsification of the sender and manipulation of the data. Unlike ESP, the communicated contents are not encrypted, and the data is sent and received as plain text.

- **Encryption**
  - Select **DES**, **3DES**, **AES-CBC 128**, or **AES-CBC 256**. The encryption can be selected only when **ESP** is selected in **Protocol**.

- **Hash**
  - Select **None**, **MD5**, **SHA1**, **SHA256**, **SHA384**, or **SHA512**. **None** can be selected only when **ESP** is selected in **Protocol**.

- **SA Lifetime**
  - Specify the IKE SA lifetime.
  - Type the time (seconds) and number of kilobytes (KByte) before the IPsec SA will expire.

- **Encapsulation Mode**
  - Select **Transport** or **Tunnel**.

- **Remote Router IP-Address**
  - Specify the IP address (IPv4 or IPv6) of the connection destination. Enter this information only when the **Tunnel** mode is selected.

---

**SA (Security Association)** is an encrypted communication method using IPsec or IPv6 that exchanges and shares information, such as the encryption method and encryption key, in order to establish a secure communication channel before communication begins. SA may also refer to a virtual encrypted communication channel that has been established. The SA used for IPsec establishes the encryption method, exchanges the keys, and carries out mutual authentication according to the IKE (Internet Key Exchange) standard procedure. In addition, the SA is updated periodically.

---

Submit

Click this button to register the settings.

When you change the settings for the template currently in use, the IPsec screen in Web Based Management will close and open again.

---

**Related Information**

- Configure an IPsec Template Using Web Based Management
Send an Email Securely

- Configure Email Sending Using Web Based Management
- Send an Email with User Authentication
- Send an Email Securely Using SSL TLS
Configure Email Sending Using Web Based Management

We recommend using Web Based Management to configure secured email sending with user authentication, or email sending using SSL/TLS.

1. Start your web browser.

2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter

     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxx

     The NetBIOS name can be found in the Network Configuration Report.

3. No password is required by default. Type a password if you have set one, and then click .

4. Click the Network tab.

5. Click Protocol in the left navigation bar.

6. In the SMTP field, click Advanced Settings and make sure the status of SMTP is Enabled.

7. Configure the SMTP settings.
   • Confirm that the email settings are correct after configuration by sending a test email.
   • If you do not know the SMTP server settings, contact your network administrator or Internet Service Provider (ISP).

8. When finished, click Submit.
   The Test Send E-mail Configuration dialog box appears.

9. Follow the instructions in the dialog box to test the current settings.

Related Information
• Send an Email Securely
Send an Email with User Authentication

Your Brother machine supports the SMTP-AUTH method to send email via an email server that requires user authentication. This method prevents unauthorised users from accessing the email server.

You can use the SMTP-AUTH method for email notification and email reports (available for certain models).

We recommend using Web Based Management to configure the SMTP authentication.

Email Server Settings

You must configure your machine's SMTP authentication method to match the method used by your email server. For details about your email server settings, contact your network administrator or Internet Service Provider (ISP).

To enable SMTP server authentication, in the Web Based Management SMTP screen, under Server Authentication Method, you must select SMTP-AUTH.

Related Information

- Send an Email Securely
Your Brother machine supports SSL/TLS methods to send an email via an email server that requires secure SSL/TLS communication. To send email via an email server that is using SSL/TLS communication, you must configure SMTP over SSL/TLS.

We recommend using Web Based Management to configure SSL/TLS.

Verify Server Certificate

Under SSL/TLS, if you choose SSL or TLS, the Verify Server Certificate check box will be selected automatically.

- Before you verify the server certificate, you must import the CA certificate issued by the CA that signed the server certificate. Contact your network administrator or your Internet Service Provider (ISP) to confirm if importing a CA certificate is necessary.
- If you do not need to verify the server certificate, clear the Verify Server Certificate check box.
Port Number

If you select SSL, the Port value will be changed to match the protocol. To change the port number manually, type the port number after you choose SSL/TLS.

You must configure your machine's SMTP communication method to match the method used by your email server. For details about your email server settings, contact your network administrator or your ISP.

In most cases, the secured webmail services require the following settings:

<table>
<thead>
<tr>
<th>SMTP</th>
<th>Port</th>
<th>Server Authentication Method</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>587</td>
<td>SMTP-AUTH</td>
</tr>
</tbody>
</table>

Use IEEE 802.1x Authentication for a Wired or a Wireless Network

- What Is IEEE 802.1x Authentication?
- Configure IEEE 802.1x Authentication for a Wired or a Wireless Network Using Web Based Management (Web Browser)
- IEEE 802.1x Authentication Methods
IEEE 802.1x is an IEEE standard for wired and wireless networks that limits access from unauthorised network devices. Your Brother machine (supplicant) sends an authentication request to a RADIUS server (Authentication server) through your access point or HUB. After your request has been verified by the RADIUS server, your machine can access the network.

**Related Information**

- Use IEEE 802.1x Authentication for a Wired or a Wireless Network
Configure IEEE 802.1x Authentication for a Wired or a Wireless Network Using Web Based Management (Web Browser)

- If you configure your machine using EAP-TLS authentication, you must install the client certificate issued by a CA before you start configuration. Contact your network administrator about the client certificate. If you have installed more than one certificate, we recommend writing down the certificate name you want to use.
- Before you verify the server certificate, you must import the CA certificate that has been issued by the CA that signed the server certificate. Contact your network administrator or your Internet Service Provider (ISP) to confirm whether a CA certificate import is necessary.

You can also configure IEEE 802.1x authentication using:
- BRAdmin Professional 3 (Wired and wireless network)
- Wireless setup wizard from the control panel (Wireless network)
- Wireless setup wizard on the CD-ROM (Wireless network)

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
   - If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   - For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.
3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Network tab.
5. Do one of the following:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wired network</td>
<td>Click Wired, and then select Wired 802.1x Authentication.</td>
</tr>
<tr>
<td>Wireless network</td>
<td>Click Wireless, and then select Wireless (Enterprise).</td>
</tr>
</tbody>
</table>

6. Configure the IEEE 802.1x authentication settings.
• To enable IEEE 802.1x authentication for wired networks, select Enabled for Wired 802.1x status on the Wired 802.1x Authentication page.

• If you are using EAP-TLS authentication, you must select the client certificate that has been installed (shown with certificate name) for verification from the Client Certificate drop-down list.

• If you select EAP-FAST, PEAP, EAP-TTLS, or EAP-TLS authentication, select the verification method from the Server Certificate Verification drop-down list. Verify the server certificate using the CA certificate, imported to the machine in advance, that has been issued by the CA that signed the server certificate.

Select one of the following verification methods from the Server Certificate Verification drop-down list:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Verification</td>
<td>The server certificate can always be trusted. The verification is not performed.</td>
</tr>
<tr>
<td>CA Cert.</td>
<td>The verification method to check the CA reliability of the server certificate, using the CA certificate that has been issued by the CA that signed the server certificate.</td>
</tr>
<tr>
<td>CA Cert. + ServerID</td>
<td>The verification method to check the common name (^1) value of the server certificate, in addition to the CA reliability of the server certificate.</td>
</tr>
</tbody>
</table>

7. When finished with configuration, click Submit.

For wired networks: After configuring, connect your machine to the IEEE 802.1x supported network. After a few minutes, print the Network Configuration Report to check the <Wired IEEE 802.1x> Status.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Success</td>
<td>The wired IEEE 802.1x function is enabled and the authentication was successful.</td>
</tr>
<tr>
<td>Failed</td>
<td>The wired IEEE 802.1x function is enabled; however, the authentication failed.</td>
</tr>
<tr>
<td>Off</td>
<td>The wired IEEE 802.1x function is not available.</td>
</tr>
</tbody>
</table>

Related Information
• Use IEEE 802.1x Authentication for a Wired or a Wireless Network

---

\(^1\) The common name verification compares the common name of the server certificate to the character string configured for the Server ID. Before you use this method, contact your system administrator about the server certificate's common name and then configure Server ID.
IEEE 802.1x Authentication Methods

LEAP (Wireless network)
Lightweight Extensible Authentication Protocol (LEAP) is a proprietary EAP method developed by Cisco Systems, Inc., which uses a user ID and password for authentication.

EAP-FAST
Extensible Authentication Protocol-Flexible Authentication via Secured Tunneling (EAP-FAST) has been developed by Cisco Systems, Inc., which uses a user ID and password for authentication, and symmetric key algorithms to achieve a tunnelled authentication process.

The Brother machine supports the following inner authentication methods:
- EAP-FAST/NONE
- EAP-FAST/MS-CHAPv2
- EAP-FAST/GTC

EAP-MD5 (Wired network)
Extensible Authentication Protocol-Message Digest Algorithm 5 (EAP-MD5) uses a user ID and password for challenge-response authentication.

PEAP
Protected Extensible Authentication Protocol (PEAP) is a version of EAP method developed by Cisco Systems, Inc., Microsoft® Corporation and RSA Security. PEAP creates an encrypted Secure Sockets Layer (SSL)/Transport Layer Security (TLS) tunnel between a client and an authentication server, for sending a user ID and password. PEAP provides mutual authentication between the server and the client.

The Brother machine supports the following inner authentications:
- PEAP/MS-CHAPv2
- PEAP/GTC

EAP-TTLS
Extensible Authentication Protocol-Tunneled Transport Layer Security (EAP-TTLS) has been developed by Funk Software and Certicom. EAP-TTLS creates a similar encrypted SSL tunnel to PEAP, between a client and an authentication server, for sending a user ID and password. EAP-TTLS provides mutual authentication between the server and the client.

The Brother machine supports the following inner authentications:
- EAP-TTLS/CHAP
- EAP-TTLS/MS-CHAP
- EAP-TTLS/MS-CHAPv2
- EAP-TTLS/PAP

EAP-TLS
Extensible Authentication Protocol-Transport Layer Security (EAP-TLS) requires digital certificate authentication both at a client and an authentication server.

Store Print Log to Network

- Store Log to Network Overview
- Configure the Store Print Log to Network Settings Using Web Based Management
- Use the Store Print Log to Network's Error Detection Setting
The Store Print Log to Network feature allows you to save the print log file from your Brother machine to a network server using the Common Internet File System (CIFS) protocol. You can record the ID, type of print job, job name, user name, date, time and the number of printed pages for every print job. CIFS is a protocol that runs over TCP/IP, allowing computers on a network to share files over an intranet or the Internet.

The following print functions are recorded in the print log:
- Print jobs from your computer
- Web Connect Print

- The Store Print Log to Network feature supports Kerberos authentication and NTLMv2 authentication. You must configure the SNTP protocol (network time server) for Authentication.
- You can set the file type to TXT or CSV when storing a file to the server.

Related Information
- Store Print Log to Network
Configure the Store Print Log to Network Settings Using Web Based Management

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2
3. No password is required by default. Type a password if you have set one, and then click .
4. Click the Administrator tab.
5. Click the Store Print Log to Network menu.
6. In the Print Log field, click On.
7. Configure the following settings:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Folder Path</td>
<td>Type the destination folder where your log will be stored on the CIFS server (for example: brother\abc).</td>
</tr>
<tr>
<td>File Name</td>
<td>Type the file name you want to use for the print log (up to 32 characters).</td>
</tr>
<tr>
<td>File Type</td>
<td>Select the TXT or CSV option for the Print Log file type.</td>
</tr>
<tr>
<td>Auth. Method</td>
<td>Select the authentication method required for access to the CIFS server: Auto, Kerberos, or NTLMv2. Kerberos is an authentication protocol which allows devices or individuals to securely prove their identity to network servers using a single sign-on. NTLMv2 is the authentication method used by Windows® to log into servers.</td>
</tr>
<tr>
<td></td>
<td>• Auto: If you select Auto, NTLMv2 will be used to the authentication method.</td>
</tr>
<tr>
<td></td>
<td>• Kerberos: Select the Kerberos option to use Kerberos authentication only.</td>
</tr>
<tr>
<td></td>
<td>• NTLMv2: Select the NTLMv2 option to use NTLMv2 authentication only.</td>
</tr>
<tr>
<td>Username</td>
<td>Type the user name for the authentication (up to 96 characters).</td>
</tr>
<tr>
<td></td>
<td>• If the user name is part of a domain, enter the user name in one of the following styles: user@domain or domain\user.</td>
</tr>
<tr>
<td>Password</td>
<td>Type the password for the authentication (up to 32 characters).</td>
</tr>
<tr>
<td>Kerberos Server Address (if needed)</td>
<td>Type the KDC host address (for example: kerberos.example.com; up to 64 characters) or the IP address (for example: 192.168.56.189).</td>
</tr>
<tr>
<td>Error Detection Setting</td>
<td>Choose what action should be taken when the Print Log cannot be stored to the server due to a network error.</td>
</tr>
</tbody>
</table>

8. In the Connection Status field, confirm the last log status.
You can also confirm the error status on the LCD of your machine.

9. Click **Submit** to display the **Test Print Log to Network** page.
   To test your settings, click **Yes** and then go to the next step.
   To skip the test, click **No**. Your settings will be submitted automatically.

10. The machine will test your settings.

11. If your settings are accepted, **Test OK** appears on the screen.
    If **Test Error** appears, check all settings, and then click **Submit** to display the Test page again.

---

**Related Information**

- **Store Print Log to Network**
Use the Store Print Log to Network's Error Detection Setting

Use Error Detection Settings to determine the action that is taken when the print log cannot be stored to the server due to a network error.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
3. Click the Administrator tab.
4. Click the Store Print Log to Network menu in the left navigation bar.
5. In the Error Detection Setting section, select the Cancel Print or Ignore Log & Print option.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cancel Print</td>
<td>If you select the Cancel Print option, the print jobs are cancelled when the print log cannot be stored to the server.</td>
</tr>
<tr>
<td>Ignore Log &amp; Print</td>
<td>If you select the Ignore Log &amp; Print option, the machine prints the documentation even if the print log cannot be stored to the server.</td>
</tr>
</tbody>
</table>

When the store print log function has recovered, the print log is recorded as follows:

1. If the log cannot be stored at the end of printing, the print log except the number of printed pages will be recorded.
2. If the print log cannot be stored at the beginning and the end of printing, the print log of the job will not be recorded. When the function has recovered, the error is reflected in the log.

6. Click Submit to display the Test Print Log to Network page.
   To test your settings, click Yes and then go to the next step.
   To skip the test, click No. Your settings will be submitted automatically.
7. The machine will test your settings.
8. If your settings are accepted, Test OK appears on the screen.
   If Test Error appears, check all settings, and then click Submit to display the Test page again.

Use this section to resolve typical problems you may encounter when using your Brother machine. You can correct most problems yourself.

**IMPORTANT**

For technical help, you must call Brother customer service or your local Brother dealer. Using non-Brother supplies may affect the print quality, hardware performance, and machine reliability.

If you need additional help, go to the Brother Solutions Center at [support.brother.com](http://support.brother.com).

First, check the following:
- The machine's power cord is connected correctly and the machine's power is on. See the *Quick Setup Guide*.
- All of the protective materials have been removed. See the *Quick Setup Guide*.
- Paper is loaded correctly in the paper tray.
- The interface cables are securely connected to the machine and the computer, or the wireless connection is set up on both the machine and your computer.
- Error and maintenance messages

If you did not solve the problem with the checks, identify the problem and then see *Related Information*.

Error and Maintenance Messages

If the LCD displays errors and your Android™ device supports the NFC feature, touch your device to the NFC logo on your Brother machine to access the Brother Solutions Center and browse the latest FAQs from your device. (Your mobile telephone provider’s message and data rates may apply.)

Make sure the NFC settings of both your Brother machine and your Android™ device are set to On.

As with any sophisticated office product, errors may occur and supply items may have to be replaced. If this happens, your machine identifies the error or required routine maintenance and shows the appropriate message. The most common error and maintenance messages are shown in the table.

Follow the instructions in the Action column to solve the error and remove the message.

You can correct most errors and perform routine maintenance by yourself. If you need more tips: Visit support.brother.com, and click FAQs & Troubleshooting.

| No Paper MP   | The MP tray is out of paper, or paper is not loaded correctly in the MP tray. | Do one of the following:  
- Refill paper in the MP tray. Make sure the paper guides are set to the correct size.  
- If paper is in the tray, remove it and load it again. Make sure the paper guides are set to the correct size. |
| No Paper T1   | The machine failed to feed paper from the indicated paper tray. | Do one of the following:  
- Refill paper in the paper tray indicated on the LCD. Make sure the paper guides are set to the correct size.  
- If paper is in the tray, remove it and load it again. Make sure the paper guides are set to the correct size.  
- Do not overfill the paper tray. |
| No Toner      | The toner cartridge or the toner cartridge and drum unit assembly is not installed correctly. | Remove the toner cartridge and drum unit assembly. Remove the toner cartridge from the drum unit, and reinstall the toner cartridge back in the drum unit. Reinstall the toner cartridge and drum unit assembly back in the machine. If the problem continues, replace the toner cartridge with a new one. |
| No Tray T1    | The paper tray is not installed or not installed correctly. | Reinstall the paper tray indicated on the LCD. |
| Out of Memory | The machine’s memory is full. | Press Cancel and reduce the print resolution. |
| Print Data Full | The machine’s memory is full. | Press Cancel and delete the previously stored secure print data. |
| Print Unable ## | The machine has a mechanical problem. | • Press and hold [ ] to turn the machine off, wait a few minutes, and then turn it on again.  
• If the problem continues, contact Brother customer service. |
| Replace Drum  | It is time to replace the drum unit. | Replace the drum unit with a new one.  
See Related Information: Replace the Drum Unit.  
The drum unit counter was not reset when a new drum was installed.  
Reset the drum unit counter.  
See the instructions included with the new drum unit. |
| Replace Toner | The toner cartridge is at the end of its life. The machine stops all print operations. | Replace the toner cartridge with a new one. |
| Self-Diagnostic | The temperature of the fuser unit does not rise to a specified temperature within the specified time. The fuser unit is too hot. | Press and hold [ ] to turn the machine off, wait a few seconds, and then turn it on again. Leave the machine idle for 15 minutes with the power on. |
| Size Error    | The paper size defined in the printer driver is not supported by the defined tray. | Choose a paper size supported by the defined tray. |
### Size Error DX

**Cause**
- The paper size specified in the machine's paper size setting is not available for automatic 2-sided printing.
- The paper in the tray is not the correct size and is not available for automatic 2-sided printing.

**Action**
- Press Cancel (if required).
- Load the correct size of paper in the tray and set the tray for that paper size.
- Choose a paper size supported by 2-sided printing.
- Paper size available for automatic 2-sided printing is A4.

### Size Mismatch

**Cause**
- The paper in the tray is not the correct size.

**Action**
- Load the correct size of paper in the tray indicated on the LCD and set the size of paper for the tray. Press Go.

### Toner Low

**Cause**
- If the LCD displays this message, you can still print. The toner cartridge is near the end of its life.

**Action**
- Order a new toner cartridge now so you have it ready when the LCD displays Replace Toner.

### Too Many Trays

**Cause**
- The number of installed Optional Trays exceeds the maximum number.

**Action**
- Reduce the number of Optional Trays.

Paper Jams

Always remove the remaining paper from the paper tray and straighten the stack when you are adding new paper. This helps prevent multiple sheets of paper from feeding through the machine at one time and prevents paper jams.

- Paper is Jammed in the MP tray
- Paper is Jammed in the Paper Tray
- Paper is Jammed in the Back of the Machine
- Paper is Jammed inside the Machine
- Paper is Jammed in the 2-sided Tray
- Paper is Jammed in the Mailbox Unit
Paper is Jammed in the MP tray

If the machine's control panel or the Status Monitor indicates that there is a jam in the machine's MP tray, follow these steps:

1. Remove the paper from the MP tray.
2. Remove any jammed paper from in and around the MP tray.
3. Fan the paper stack, and then put it back in the MP tray.
4. Reload paper in the MP tray and make sure the paper stays under the maximum paper height guides (1) on both sides of the tray.

5. Do one of the following:

Related Information

- Paper Jams
If the machine's control panel or the Status Monitor indicates that there is a jam in the paper tray, follow these steps:

1. Pull the paper tray completely out of the machine.

2. Slowly pull out the jammed paper.

   Pulling the jammed paper downward using both hands allows you to remove the paper more easily.

3. Fan the stack of paper to prevent further jams, and slide the paper guides to fit the paper size.

4. Make sure the paper is below the maximum paper mark (▼▼▼).
5. Put the paper tray firmly back in the machine.

- Paper Jams
Paper is Jammed in the Back of the Machine

If the machine's control panel or the Status Monitor indicates that there is a jam in the back (Rear) of the machine, follow these steps:

1. Leave the machine turned on for 10 minutes for the internal fan to cool the extremely hot parts inside the machine.
2. Open the back cover.

3. Pull the green levers at the left and right sides toward you to release the fuser cover.

![Diagram of the machine with parts highlighted]

**WARNING**

HOT SURFACE
The machine's internal parts will be extremely hot. Wait for the machine to cool down before touching them.

4. Use both hands to gently pull the jammed paper out of the fuser unit.

![Diagram of hands pulling paper]

---

Page 250
5. Close the fuser cover.

6. Close the back cover until it locks in the closed position.

**Related Information**

- Paper Jams
If the machine's control panel or the Status Monitor indicates that there is a jam inside the machine, follow these steps:

1. Leave the machine turned on for 10 minutes for the internal fan to cool the extremely hot parts inside the machine.
2. Open the front cover.

3. Remove the toner cartridge and drum unit assembly.

**WARNING**

HOT SURFACE

The machine's internal parts will be extremely hot. Wait for the machine to cool down before touching them.

4. Pull out the jammed paper slowly.

5. Install the toner cartridge and drum unit assembly into the machine.
6. Close the front cover.

Related Information

- Paper Jams
If the machine's control panel or the Status Monitor indicates that there is a jam in the 2-sided paper tray, follow these steps:

1. Leave the machine turned on for 10 minutes for the internal fan to cool the extremely hot parts inside the machine.
2. Pull the paper tray completely out of the machine.
3. At the back of the machine, pull the 2-sided tray completely out of the machine.
4. Pull the jammed paper out of the machine or out of the 2-sided tray.
5. Remove paper that may have jammed under the machine due to static electricity.
6. If paper is not caught inside the 2-sided tray, open the back cover.

![Image]

**WARNING**

**HOT SURFACE**

The machine’s internal parts will be extremely hot. Wait for the machine to cool down before touching them.

7. Use both hands to gently pull the jammed paper out of the back of the machine.

![Image]

8. Close the back cover until it locks in the closed position.
9. Put the 2-sided tray firmly back in the rear of the machine.
10. Put the paper tray firmly back in the front of the machine.

## Improve the Print Quality

If you have a print quality problem, print a test page first. If the printout looks good, the problem is probably not the machine. Check the interface cable connections and try printing a different document. If the printout or test page printed from the machine has a quality problem, check the examples of poor print quality in the table and follow the recommendations.

### IMPORTANT

Using non-Brother supplies may affect the print quality, hardware performance, and machine reliability.

1. To get the best print quality, we suggest using recommended print media. Make sure you use paper that meets our specifications.
2. Check that the toner cartridge and drum unit are installed correctly.

<th>Recommendation</th>
</tr>
</thead>
</table>
| **Curled or wavy**            | • Check the paper type and quality. High temperatures and high humidity will cause paper to curl.  
• If you do not use the machine often, the paper may have been in the paper tray too long. Turn over the stack of paper in the paper tray. Also, fan the paper stack, and then rotate the paper 180° in the paper tray.  
• Open the back cover (face up output tray) to let the printed paper exit onto the face up output tray.  
• Choose **Reduce Paper Curl** mode in the printer driver when you do not use our recommended print media. |
| **Wrinkles or creases**       | • Make sure paper is loaded correctly.  
• Check the paper type and quality.  
• Turn over the stack of paper in the tray or rotate the paper 180° in the input tray. |
| **Poor fixing**               | • Make sure the media type setting in the driver matches the type of paper you are using.  
• Choose **Improve Toner Fixing** mode in the printer driver.  
If this selection does not provide enough improvement, change the printer driver setting in **Media Type** to a thick setting. If you are printing an envelope, choose **Env. Thick** in the media type setting. |
| **Envelope creases**          | • Make sure envelopes are printed with the back cover (face up output tray) opened.  
• Make sure envelopes are fed only from the MP tray. |

**Related Information**

- Network Problems
Use the Network Connection Repair Tool (Windows®)

Use the Network Connection Repair Tool to fix the Brother machine's network settings. It will assign the correct IP address and Subnet Mask.

- (Windows® XP/XP Professional x64 Edition/Windows Vista®/Windows® 7/Windows® 8) You must log on with Administrator rights.
- Make sure the Brother machine is turned on and is connected to the same network as your computer.

1. Do one of the following:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows® XP</td>
<td>Click Start &gt; All Programs &gt; Accessories &gt; Windows Explorer &gt; My Computer.</td>
</tr>
<tr>
<td>Windows Server® 2003/2008</td>
<td>Click Start &gt; All Programs &gt; Accessories &gt; Windows Explorer &gt; Computer.</td>
</tr>
<tr>
<td>Windows Vista®/Windows® 7</td>
<td>Click (Start) &gt; Computer.</td>
</tr>
<tr>
<td>Windows® 8</td>
<td>Click the (File Explorer) icon on the taskbar, and then click Computer (This PC) in the left navigation bar.</td>
</tr>
<tr>
<td>Windows Server® 2012 / 2012 R2</td>
<td>Click Computer (This PC) on the Start screen.</td>
</tr>
</tbody>
</table>

2. Double-click XXX(C:) (where XXX is the name of your local disk drive) > Program Files > Browny02 > Brother > BrotherNetTool.exe.

- For 64-bit OS users, double-click XXX(C:) (where XXX is the name of your local disk drive) > Program Files (x86) > Browny02 > Brother > BrotherNetTool.exe.
- If the User Account Control screen appears, do one of the following:
  - (Windows Vista®) Click Allow.
  - (Windows® 7/Windows® 8) Click Yes.

3. Follow the on-screen instructions.
4. Check the diagnosis by printing the Network Configuration Report.

The Network Connection Repair Tool will start automatically if you select the Enable Connection Repair Tool option in the Status Monitor. Right-click the Status Monitor screen, and then click Other Settings > Enable Connection Repair Tool. This is not recommended when your network administrator has set the IP address to Static, since it will automatically change the IP address.

If the correct IP address and the Subnet Mask are still not assigned even after using the Network Connection Repair Tool, ask your network administrator for this information.

<tr>
<th>Check</th>
<th>Action</th>
<th>Interface</th>
</tr>
</thead>
</table>
| Check that your Brother machine, access point/router, or network hub is turned on. | **Check the following:**  
- The power cord is connected correctly and the Brother machine is turned on.  
- The access point/router or hub is turned on and its link button is blinking.  
- All protective packaging has been removed from the machine.  
- The toner cartridge and drum unit are installed correctly.  
- The front and back covers are fully closed.  
- Paper is inserted correctly in the paper tray.  
- (For wired networks) A network cable is securely connected to the Brother machine and to the router or hub. | Wired/Wireless |
| Check the **Link Status** in the Network Configuration Report. | Print the Network Configuration Report and check that **Ethernet Link Status** or **Wireless Link Status** is **Link OK**. | Wired/Wireless |
| Check that you can "ping" the Brother machine from your computer. | Ping the Brother machine from your computer using the IP address or the node name in the Windows® command prompt or Macintosh Terminal application:  
```  
ping <ipaddress> or <nodename>.  
```  
- Successful: Your Brother machine is working correctly and connected to the same network as your computer.  
- Unsuccessful: Your Brother machine is not connected to the same network as your computer.  
(Windows®)  
Ask the network administrator and use the Network Connection Repair Tool to fix the IP address and the subnet mask.  
(Macintosh)  
Confirm that the IP address and the Subnet Mask are set correctly. | Wired/Wireless |
| Check that your Brother machine is connected to the wireless network. | Print the WLAN Report to check the error code on the printed report. | Wireless |

If you have checked and tried all of the above but you are still having problems, see the instructions supplied with your wireless LAN access point/router to find the SSID and the Network Key information and set them correctly.

4. Press 🏡.
Routine Maintenance

- Replace Supplies
- Clean the Machine
- Check the Remaining Life of Parts
- Pack and Ship Your Machine
Replace Supplies

You must replace supplies when the machine indicates that the life of the supply is over. Using non-Brother supplies may affect the print quality, hardware performance, and machine reliability.

- The toner cartridge and drum unit are two separate supplies. Make sure both are installed as an assembly.
- The model name of supplies may vary depending on the country.

This table lists the messages to replace supplies when they reach their end of life. To avoid any inconvenience, you may want to buy spare supplies to keep as replacements before the machine stops printing.

</table>

1 Standard toner cartridge
2 High yield toner cartridge
3 Super high yield toner cartridge (Available only for certain models)
4 Ultra high yield toner cartridge (Available only for certain models)
5 A4 or Letter size 1-sided pages.
6 Approximate cartridge yield is declared in accordance with ISO/IEC 19752.
7 Approximately 30,000 pages based on 1 page per job and 50,000 pages based on 3 pages per job [A4/letter simplex pages]. The number of pages may be affected due to a variety of factors including but not limited to media type and media size.

NOTE

- Be sure to seal up the used supplies tightly in a bag so that toner powder does not spill out of the cartridge.
- Visit [http://www.brother.com/original/index.html](http://www.brother.com/original/index.html) for instructions on how to return your used supplies to the Brother collection program. If you choose not to return your used supply, discard the used supply according to local regulations, keeping it separate from domestic waste. If you have questions, contact your local waste disposal office.
- We recommend placing used supplies on a piece of paper to prevent accidentally spilling or scattering the material inside.
- If you use paper that is not a direct equivalent for the recommended print media, the life of supplies and machine parts may be reduced.
- The projected life for each of the toner cartridges is based on ISO/IEC 19752. Frequency of replacement will vary depending on the print volume, percentage of coverage, types of media used, and powering on/off the machine.
• Frequency of replacing supplies except toner cartridges will vary depending on the print volume, types of media used, and powering on/off the machine.
• Handle the toner cartridge carefully. If toner scatters on your hands or clothes, immediately wipe or wash it off with cold water.
• To avoid print quality problems, DO NOT touch the shaded parts shown in the illustrations.

Replace the Toner Cartridge

1. Make sure the machine is turned on.
2. Open the front cover.
3. Remove the toner cartridge and drum unit assembly from the machine.
4. Push down the green lock lever and take the toner cartridge out of the drum unit.
5. Unpack the new toner cartridge.
6. Remove the protective cover.
7. Put the new toner cartridge firmly into the drum unit until you hear it lock into place.
Make sure you put the toner cartridge in correctly or it may separate from the drum unit.

8. Clean the corona wire inside the drum unit by gently sliding the green tab from left to right and right to left several times.

Be sure to return the tab to the Home position (A). The arrow on the tab must be aligned with the arrow on the drum unit. If it is not, printed pages may have a vertical stripe.

9. Install the toner cartridge and drum unit assembly back into the machine.

10. Close the front cover of the machine.

- Do not turn off the machine or open the front cover until the machine returns to Ready Mode.
- The toner cartridge that comes with your Brother machine is a Inbox toner cartridge.
- It is a good idea to keep a new toner cartridge ready for use when you see the Toner Low warning.
- To ensure high quality printing, we recommend using only Brother Original toner cartridges. When you want to buy toner cartridges, contact Brother Dealer.
- DO NOT unpack the new toner cartridge until you are ready to install it.
- If a toner cartridge is left unpacked for a long time, the toner life will be shortened.
- Brother strongly recommends you DO NOT refill the toner cartridge provided with your machine. We also strongly recommend you continue to use only Brother Original replacement toner cartridges. Use or attempted use of third party toner and/or cartridges in the Brother machine may cause damage to the machine and/or may result in unsatisfactory print quality. Our limited warranty coverage does not apply to any problem that is caused by the use of third party toner and/or cartridges. To protect your investment and obtain premium performance from the Brother machine, we strongly recommend the use of Brother Original Supplies.
Related Information

- Replace Supplies
Replace the Drum Unit

1. Make sure the machine is turned on.
2. Open the front cover.

3. Remove the toner cartridge and drum unit assembly from the machine.

4. Push down the green lock lever and take the toner cartridge out of the drum unit.

5. Unpack the new drum unit.
6. Put the toner cartridge firmly into the new drum unit until you hear it lock into place.

---

Make sure you put the toner cartridge in correctly or it may separate from the drum unit.
7. Clean the corona wire inside the drum unit by gently sliding the green tab from left to right and right to left several times.

Be sure to return the tab to the Home position (▲). The arrow on the tab must be aligned with the arrow on the drum unit. If it is not, printed pages may have a vertical stripe.

8. Install the toner cartridge and drum unit assembly back into the machine.

9. Close the front cover of the machine.

**NOTE**

- Drum wear and tear occurs due to use and rotation of the drum and interaction with paper, toner and other materials in the paper path. In designing this product, Brother decided to use the number of rotations of the drum as a reasonable determinant of the drum life. When a drum reaches the factory-established rotation limit corresponding to the rated page yield, the product’s LCD will advise you to replace the drum. The product will continue to function; however, print quality may not be optimal.
- If an unpacked drum unit is placed in direct sunlight (or room light for long periods of time), the unit may be damaged.
- There are many factors that determine the actual drum life, such as the temperature, humidity, type of paper, type of toner used and so on. Under ideal conditions, the average drum life is estimated at approximately 30,000 pages based on 1 page per job and 50,000 pages based on 3 pages per job [A4/letter simplex pages]. The number of pages may be affected due to a variety of factors including but not limited to media type and media size.

Because we have no control over the many factors that determine the actual drum life, we cannot guarantee a minimum number of pages that will be printed by your drum.

- For best performance, use only Brother Original toner.
- The machine should be used only in a clean, dust-free environment with adequate ventilation.

Printing with a non-Brother drum unit may reduce not only the print quality but also the quality and life of the machine itself. Warranty coverage does not apply to problems caused by the use of a non-Brother drum unit.

Clean the Machine

Clean the outside and inside of the machine regularly with a dry, lint-free cloth. When you replace the toner cartridge or the drum unit, make sure you clean the inside of the machine. If printed pages are stained with toner, clean the inside of the machine with a dry, lint-free cloth.

**WARNING**

- DO NOT use flammable substances, any type of spray, or an organic solvent/liquid containing alcohol or ammonia to clean the inside or outside of the product. Doing so could cause a fire. Instead, use only a dry, lint-free cloth.

**IMPORTANT**

- DO NOT use isopropyl alcohol to remove dirt from the control panel. It may crack the panel.
- To avoid print quality problems, DO NOT touch the shaded parts shown in the illustrations.

- \texttt{General Settings}
Reduce Toner Consumption

Using the Toner Save feature may reduce toner consumption. When Toner Save is set to on, the print on your documents appears lighter.

We DO NOT recommend using the Toner Save feature for printing photo or greyscale images.

>> HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT

1. Press ▲ or ▼ to display the [General Setup] option, and then press OK.
2. Press ▲ or ▼ to display the [Ecology] option, and then press OK.
3. Press ▲ or ▼ to display the [Toner Save] option, and then press OK.
4. Press ▲ or ▼ to display [On], and then press Go.

## HL-L6300DW/HL-L6300DWT/HL-L6400DW/HL-L6400DWT

1. Press [Settings] > [General Setup] > [Ecology] > [Toner Save].
3. Press 🏡.

Settings and Features Tables

The Settings tables will help you understand the menu selections and options that are found in the machine’s programs.

- Access Menus and Change Your Machine’s Settings
- Settings Tables (1 Line LCD models)
- Settings Tables (1.8 inch Touchscreen models)
- Features Tables (1.8 inch Touchscreen models)
Access Menus and Change Your Machine’s Settings

Use the control panel to access the machine’s menus and change various settings.

1. Scroll through each menu level by pressing ▲ or ▼.
2. When the option you want appears on the LCD, press OK.
   The LCD displays the next menu level.
3. Press ▲ or ▼ to scroll to your selection.
4. Press OK or Go.
5. When you have finished setting an option, the LCD displays [Accepted].

### [Network] (HL-L5100DN/HL-L5100DNT/HL-L6250DN)

| Level 1 | Level 2 | Description |
--- | --- | ---
TCP/IP | Boot Method | Choose the IP method that best suits your needs. |
 | IP Address | Enter the IP address. |
 | Subnet Mask | Enter the Subnet mask. |
 | Gateway | Enter the Gateway address. |
 | IP Boot Tries | Specify the number of attempts the machine will try to obtain an IP address when the Boot Method is set to any setting except Static. |
 | APIPA | Allocate the IP address from the link-local address range automatically. |
 | IPv6 | Enable or disable the IPv6 protocol. |
Ethernet | - | Choose the Ethernet link mode. |
Wired Status | - | Display the Ethernet link status. |
MAC Address | - | Display the MAC address of the machine. |
IPsec | - | IPsec is an optional security feature of the IP protocol that provides authentication and encryption services. We recommend contacting your network administrator before changing this setting. |
Network Reset | - | Restore all network settings of your machine to the factory settings. |

1 On connection to the network, if the machine's 'Boot Method' is 'Auto' the machine will attempt to set the IP address and Subnet Mask from a boot server such as DHCP. If a boot server cannot be found, an APIPA IP address will be allocated, such as 169. 254. [001-254]. [000-255]. If the 'Boot Method' of the machine is set to 'Static' you must manually enter an IP address from the machine's control panel.

---

1. On connection to the network, if the machine’s ‘Boot Method’ is ‘Auto’ the machine will attempt to set the IP address and Subnet Mask from a boot server such as DHCP. If a boot server cannot be found, an APIPA IP address will be allocated, such as 169. 254. [001-254]. [000-255]. If the ‘Boot Method’ of the machine is set to ‘Static’ you must manually enter an IP address from the machine’s control panel.

Change Machine Settings Using Web Based Management

Web Based Management is a utility that uses a standard web browser to manage your machine using the Hyper Text Transfer Protocol (HTTP) or Hyper Text Transfer Protocol over Secure Socket Layer (HTTPS).

- What is Web Based Management?
- Access Web Based Management
- Set a Login Password for Web Based Management
- Network Management Software and Utilities
What is Web Based Management?

Web Based Management is a utility that uses a standard web browser to manage your machine using the Hyper Text Transfer Protocol (HTTP) or Hyper Text Transfer Protocol over Secure Socket Layer (HTTPS). Type your machine’s IP address into your web browser to access and change your print server settings.

- We recommend Microsoft® Internet Explorer® 8.0/10.0/11.0 for Windows®, and Safari 8.0 for Macintosh. Make sure that JavaScript and Cookies are always enabled in whichever browser you use. If you use different web browser, make sure it is compatible with HTTP 1.0 and HTTP 1.1.
- You must use the TCP/IP protocol on your network and have a valid IP address programmed into the print server and your computer.

• The actual screen may differ from the screen shown above.
• The following explanations are examples. The available functions vary according to the model.

General
Use this tab to confirm the current status of your Brother machine and to change basic settings, such as the timer settings.

Print
Use this tab to confirm and change the print settings.

Administrator
Use this tab to set the Web Based Management password, reset various settings, and configure the function settings that are mainly used by administrators. You can also use Secure Function Lock to restrict functions according to the user.

Network
Use this tab to change the network settings, enable or disable the network protocols, and configure the security and certificate settings.
Related Information

- Change Machine Settings Using Web Based Management
Access Web Based Management

- We recommend using the HTTPS security protocol when configuring settings using Web Based Management.
- When you use HTTPS for Web Based Management configuration, your browser will display a warning dialog box.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   
   For example:
   
   http://192.168.1.2

   - If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     
     - For example:
       
       http://SharedPrinter
   
   - If you enable a NetBIOS name, you can also use the node name.
     
     - For example:
       
       http://brnxxxxxxxxxxxx
   
   The NetBIOS name can be found in the Network Configuration Report.

   - For Macintosh, access Web Based Management by clicking the machine's icon on the **Status Monitor** screen.

3. No password is required by default. Type a password if you have set one, and then click **Submit**.

You can now change the print server settings.

If you change the protocol settings, you must restart the machine after clicking **Submit** to activate the configuration.

**Related Information**

- Change Machine Settings Using Web Based Management
- Print the Network Configuration Report
Set a Login Password for Web Based Management

We recommend setting a login password to prevent unauthorised access to Web Based Management.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2

   • If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
     - For example:
       http://SharedPrinter
     If you enable a NetBIOS name, you can also use the node name.
     - For example:
       http://brnxxxxxxxxxxxx
     The NetBIOS name can be found in the Network Configuration Report.
   • For Macintosh, access Web Based Management by clicking the machine's icon on the Status Monitor screen.

3. No password is required by default. Type a password if you have set one, and then click Submit.
4. Click Administrator.
5. Type the password you want to use in the Enter New Password field (up to 32 characters).
6. Retype the password in the Confirm New Password field.
7. Click Submit.

In the future, every time you access Web Based Management, type the password in the Login field, and then click.

After configuring the settings, log off by clicking.

If you have not previously set a login password, you can also set a password by clicking the Please configure the password button on the machine's web page.

12 The print speed may change depending on the type of document you print.
13 Print speed may be slower when the machine is connected by wireless LAN.
14 From Ready mode and standard tray
15 If the parallel cable is not provided with the machine in your country or region, please contact Brother customer service or your local Brother dealer to purchase the optional parallel cable (PC-5000).
16 Your machine has a USB 2.0 Hi-Speed interface. The machine can also be connected to a computer that has a USB 1.1 interface.
17 Third party USB ports are not supported.
18 Use a straight-through Category 5 (or greater) twisted-pair cable.
19 When you connect the machine to a Gigabit Ethernet Network, use network devices complying with the 1000BASE-T specification.
Supported Protocols and Security Features

Ethernet
10Base-T/100Base-TX/1000Base-T

Wireless LAN
IEEE 802.11b/g/n (Infrastructure Mode/Ad-hoc Mode), IEEE 802.11g/n (Wi-Fi Direct)

Protocols (IPv4)
ARP, RARP, BOOTP, DHCP, APIPA (Auto IP), WINS/NetBIOS name resolution, DNS Resolver, mDNS, LLMNR responder, LPR/LPD, Custom Raw Port/Port9100, IPP/IPPS, FTP Server, TELNET Server, HTTP/HTTPS server, TFTP client and server, SMTP Client, SNMPv1/v2c/v3, ICMP, Web Services (Print), CIFS client, SNTP client, LDAP (available only for certain models)

Protocols (IPv6)
NDP, RA, DNS resolver, mDNS, LLMNR responder, LPR/LPD, Custom Raw Port/Port9100, IPP/IPPS, FTP Server, TELNET Server, HTTP/HTTPS server, TFTP client and server, SMTP Client, SNMPv1/v2c, ICMPv6, Web Services (Print), CIFS Client, SNTP Client, LDAP (available only for certain models)

Network Security (Wired)
SMTP-AUTH, SSL/TLS (IPPS, HTTPS, SMTP), SNMP v3 802.1x (EAP-MD5, EAP-FAST, PEAP, EAP-TLS, EAP-TTLS), Kerberos, IPSec

Network Security (Wireless)
SMTP-AUTH, SSL/TLS (IPPS, HTTPS, SMTP), SNMP v3 802.1x (LEAP, EAP-FAST, PEAP, EAP-TLS, EAP-TTLS), Kerberos, IPSec

Wireless Network Security
WEP 64/128 bit, WPA-PSK (TKIP/AES), WPA2-PSK (AES)

Wireless Certification
Wi-Fi Certification Mark License (WPA™/WPA2™ - Enterprise, Personal), Wi-Fi Protected Setup (WPS) Identifier Mark License, Wi-Fi CERTIFIED Wi-Fi Direct

How to Enter Text on Your Brother Machine

When setting certain options, such as the Network Key, you must enter characters on the machine:

• Hold down or repeatedly press ▲ or ▼ to select a character from this list:
  0123456789 abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ(space)!"#$%&'()*+,-./:;<=>?@【】^_`

• Press OK when the character or symbol you want is displayed, and then enter the next character.

• Press Back to delete characters entered incorrectly.

When text is required, a keyboard appears on your machine's LCD.

• The characters may differ depending on your country.

• The keyboard layout may differ depending on the operation you perform.

  • Press 0 to cycle between letters, numbers and special characters.
  
  • To move the cursor to the left or right, press ◀ or ▶.

  **Inserting spaces**

  • To enter a space, press 0 twice to choose special characters, then press the space button.

  **Making corrections**

  • If you entered a character incorrectly and want to change it, press ◀ or ▶ to move the cursor to the incorrect character and press X. Enter the correct character.

  • To insert a character, press ◀ or ▶ to move the cursor to the correct place, and then enter the character.

  • Press X for each character you want to erase, or press and hold X to erase all the characters.

**Related Information**

• Appendix

• Configure Your Machine for a Wireless Network in Ad-Hoc Mode Using an Existing SSID

• Configure Your Machine for a Wireless Network Using the Machine's Control Panel Setup Wizard

• Configure Your Machine for a Wireless Network in Ad-Hoc Mode Using a New SSID
• Configure Your Machine for a Wireless Network When the SSID Is Not Broadcast
When the time comes to replace supplies, such as the toner or drum, an error message will appear on your machine’s control panel or in the Status Monitor. For more information about the supplies for your machine, visit http://www.brother.com/original/index.html or contact your local Brother dealer.

- The toner cartridge and drum unit are two separate parts.
- The toner cartridge number will vary depending on your country and region.

### Related Information

- Appendix
- Mailbox Unit
The optional Mailbox (MX) unit gives you increased control over your Brother machine’s print output. You can assign the unit's four output bins to specific users, organize specific print jobs more efficiently, and extend the machine’s printout capacity.

Use the Mailbox unit as a:

- Mailbox: Assign each bin to a specific user or group, and send print jobs directly to each recipient's bin.
- Stacker: When printing large documents, use the bins to increase your machine's output tray capacity. When the machine's output tray is full, the machine ejects the pages into the Mailbox bins. To increase the machine's output capacity to a maximum of 1,050 sheets (including the standard output tray), remove bins 2 and 4.
- Sorter: When printing multiple copies, set the printer driver to eject each copy into a different bin.

Set your preferences for Stacker (MX Stacker) and Sorter (MX Sorter) in your printer driver or on your Brother machine’s LCD.

**To set MX Stacker or MX Sorter in your printer driver (for Windows®)**

In your printer driver, click the Advanced tab, click the Output Tray drop-down menu, and select either MX Stacker or MX Sorter. Click OK.

**To set MX Stacker or MX Sorter in your printer driver (for Macintosh)**

In your printer driver, select Print Settings, click the Output Tray pop-up menu, and select either MX Stacker or MX Sorter.

For more information on printer driver settings, see Related Information.

**To set MX Stacker or MX Sorter from the machine’s LCD**

On the machine’s LCD, press [Settings] > [Paper Tray] > [Output Tray] > [MX Stacker] or [MX Sorter].

---

**Related Information**

- Accessories
- Use Standard Tray When Full
- Mailbox Continue
- Assign a Mailbox Bin to a User or Group
• Print Settings (Windows®)
• Print Options (Macintosh)
The **Use Std. Tray when full** feature allows a large print job to continue printing, even if the Mailbox bins are full. If you select this option in your printer driver, the machine continues the print job, ejecting the remaining pages onto the machine's main output tray when the Mailbox bins are full.

For more information on the printer driver settings, see *Related Information*.

This setting's name is for Windows and may vary for Macintosh depending on your country.

**Related Information**

- Mailbox Unit
- Print Settings (Windows®)
- Print Options (Macintosh)
If a print job stopped because all the bins are full, the MX (Mailbox) Continue feature allows the machine to resume the print job after you remove the printed pages from any of the printout locations.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Your machine resumes the print job using the first empty output tray or Mailbox bin.</td>
</tr>
<tr>
<td>Off</td>
<td>You must remove the printed pages from the output tray and all Mailbox bins to resume the print job.</td>
</tr>
</tbody>
</table>

By default, MX Continue is off. To turn on MX Continue:

Press 📦 [Settings] > [Paper Tray] > [MX Continue] > [On].

Related Information

- Mailbox Unit
- Settings Tables (1.8 inch Touchscreen models)
Assign a Mailbox Bin to a User or Group

To organize print jobs by sending them to a specific recipient, assign each Mailbox bin to an individual or to a group.

- This feature is available only when Secure Function Lock 3.0 is on.
- Make sure you select **Auto** (default setting) from **Output Tray** in the printer driver when you send the print job.
- This setting's name is for Windows and may vary for Macintosh depending on your country.

Anyone using your Brother machine can send a print job to a specific bin but the administrator must assign the bins to users or groups first.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example:
   http://192.168.1.2
3. Click the **Administrator** tab.
4. Click the **User Restriction Function** menu in the left navigation bar.
5. Select **Secure Function Lock**.
6. Click **Submit**.
7. Click the **User List** menu in the left navigation bar.
8. In the **User List** field, type the user name.
9. In the **PIN Number** field, type a four-digit password.
10. Click the **Output** drop-down list, and then select the output tray for each user.
11. Select **User List / Restricted Functions** from the drop-down list for each user.
12. Click **Submit**.
13. Click the **Print** tab.
14. Click the **Tray** menu in the left navigation bar.
15. Click the **Output** drop-down list, and then select **SFL setting**.
16. Click **Submit**.

Information Regarding Recycled Paper

• Recycled paper is of the same quality as paper made from original forest sources. Standards governing modern recycled paper ensure that it meets the highest quality requirements for different printing processes. The imaging equipment supplied by the VA signatories is suitable for using with recycled paper meeting the EN 12281:2002 standard.

• Purchasing recycled paper saves natural resources and promotes the circular economy. Paper is made using cellulose fibres from wood. Collecting and recycling paper extends the life of fibres over multiple life cycles, making the best use of the resources.

• The recycled paper production process is shorter. The fibres have already been processed, so less water and energy, and fewer chemicals are used.

• Paper recycling has the benefit of saving carbon by diverting paper products from alternative disposal routes such as landfill and incineration. Landfill waste emits methane gas, which has a powerful greenhouse effect.

Active Directory® Authentication

Active Directory® Authentication restricts the use of the Brother machine. You cannot use your machine until you log on to the machine using a user ID and password.

Ad-Hoc Mode

The mode of operation in a wireless network, in which all devices (machines and computers) are connected without an access point/router.

AES

Advanced Encryption Standard (AES) is the Wi-Fi®-authorised strong encryption standard.

APIPA

If you do not assign an IP address manually or automatically (using a DHCP, BOOTP, or RARP server), the Automatic Private IP Addressing (APIPA) protocol will automatically assign an IP address from the range 169.254.1.0 to 169.254.254.255.

ARP

Address Resolution Protocol (ARP) performs mapping of an IP address to a MAC address in a TCP/IP network.

Authentication

Most wireless networks use some kind of security settings. These security settings define the authentication (how the device identifies itself to the network) and encryption (how the data is encrypted as it is sent on the network). If you do not correctly specify these options when you are configuring your Brother wireless machine, it will not be able to connect to the wireless network. Therefore, care must be taken when configuring these options.

Authentication Methods for a Personal Wireless Network

A personal wireless network is a small network (such as a home wireless network) without IEEE 802.1x support.

• Open system
  Wireless devices are allowed to access the network without any authentication.

• Shared key
  A secret pre-determined key is shared by all devices that will access the wireless network. The Brother wireless machine uses the WEP key as the pre-determined key.

• WPA-PSK/WPA2-PSK
  Enables a Wi-Fi Protected Access® Pre-shared key (WPA-PSK/WPA2-PSK), which enables the Brother wireless machine to associate with access points using TKIP for WPA-PSK or AES for WPA-PSK and WPA2-PSK (WPA-Personal).

Authentication Methods for an Enterprise Wireless Network

An enterprise wireless network is a large network, for example using your machine in a business enterprise wireless network, with IEEE 802.1x support. If you configure your machine in an IEEE 802.1x supported wireless network, you can use the following authentication methods.

• LEAP
• EAP-FAST
The authentication methods above use the user ID less than 64 characters and a password of less than 32 characters in length.

**BOOTP**

The Bootstrap Protocol (BOOTP) is a network protocol used by a network client to obtain an IP Address from a configuration server.

To use BOOTP, contact your network administrator.

**BRAdmin Light (Windows®)**

BRAdmin Light is a utility for the initial setup of Brother network-connected devices. This utility can search for Brother products on your network, view the status and configure the basic network settings, such as IP address. Go to your model's Downloads page on the Brother Solutions Center at support.brother.com to download BRAdmin Light.

**BRAdmin Professional 3 (Windows®)**

BRAdmin Professional 3 is a utility for more advanced management of network-connected Brother devices. This utility can search for Brother products on your network and view the device status from an easy-to-read Windows® Explorer-style screen that changes colour to identify the status of each device. You can configure network and device settings, and update device firmware from a Windows® computer on your LAN. BRAdmin Professional 3 can also log activity of Brother devices on your network and export the log data in an HTML, CSV, TXT, or SQL format. For users who want to monitor locally-connected machines, install the Print Auditor Client software on the client computer. This utility allows you to use BRAdmin Professional 3 to monitor machines that are connected to a client computer via the USB interface.

Go to your model's Downloads page on the Brother Solutions Center at support.brother.com to download the software.

* This utility is available only for Windows®.
* Go to your model's Downloads page on the Brother Solutions Center at support.brother.com to download the latest version of Brother's BRAdmin Professional 3 utility.
* Node name: The node name appears in the current BRAdmin Professional 3 window. The default node name is "BRxxxxxxxxxxxxx" for a wired network or "BRWxxxxxxxxxxxxx" for a wireless network (where "xxxxxxxxxxxxx" is your machine's MAC Address / Ethernet address).
* If you are using Windows® Firewall, or the firewall function of an anti-spyware or antivirus application, temporarily disable them. When you are sure you can print, configure the software settings following the instructions.

**BRPrint Auditor (Windows®)**

Brother's BRPrint Auditor software brings the monitoring power of Brother network management tools to locally-connected machines. This utility allows a client computer to collect usage and status information from your
Brother machine connected via the parallel or USB interface. The BRPrint Auditor can then pass this information to another computer running BRAdmin Professional 3 on the network. This allows the administrator to check items, such as page counts, toner and drum status, and the firmware version. In addition to reporting to Brother network management applications, this utility can email the usage and status information directly to a predefined email address in a CSV or XML file format (SMTP Mail support required). The BRPrint Auditor utility also supports email notification for reporting warning and error conditions.

### CA

A Certificate Authority (CA) is an entity that issues digital certificates (especially X.509 certificates) and vouches for the binding between the data items in a certificate.

### CA Certificate

A CA Certificate is the certification that identifies the CA itself and owns its private key. A CA Certificate verifies a certificate issued by the CA.

### Certificate

A Certificate is the information that binds together a public key with an identity. The certificate can be used to verify that a public key belongs to an individual. The format is defined by the X.509 standard.

### Channels

Wireless networks use channels. Each wireless channel is on a different frequency. There are up to 14 different channels that can be used when using a wireless network. However, in many countries the number of channels available is restricted.

### CIFS

The Common Internet File System (CIFS) is the standard way that computer users share files and printers in Windows®.

### CSR

A Certificate Signing Request (CSR) is a message sent from an applicant to a Certificate Authority (CA) to apply for issue of a certificate. The CSR contains information identifying the applicant, the public key generated by the applicant and the digital signature of the applicant.

### Custom Raw Port

Custom raw port is a commonly used printing protocol on a TCP/IP network that enables interactive data transmission. Default is Port 9100.

### Density

Changing the Density makes the whole image lighter or darker.
DHCP

The Dynamic Host Configuration Protocol (DHCP) is a network protocol that is used to configure network devices so that they can communicate on an IP Network.

To use DHCP, contact your network administrator.

DNS Client

The Brother print server supports the Domain Name System (DNS) client feature. This feature allows the print server to communicate with other devices using its DNS name.

DNS Server

The Domain Name System (DNS) is a technology to manage the names of web sites and internet domains. A DNS server allows your computer to find its IP address automatically.

Driver Deployment Wizard

Brother's Installation CD-ROM includes the Windows® printer driver and Brother network port driver (LPR and NetBIOS). If an administrator installs the printer driver and port driver using this application, the administrator can save the file to the file server or send the file by email to users. Then, each user just clicks that file to have the printer driver, port driver, IP address, etc. automatically copied to their computer.

Encryption

Most wireless networks use some kind of security settings. These security settings define the authentication (how the device identifies itself to the network) and encryption (how the data is encrypted as it is sent on the network). If you do not correctly specify these options when you are configuring your Brother wireless machine, it will not be able to connect to the wireless network. Therefore, care must be taken when configuring these options.

Encryption Methods for a Personal Wireless Network

A personal wireless network is a small network (such as a home wireless network) without IEEE 802.1x support.

- None
  No encryption method is used.

- WEP
  When using Wired Equivalent Privacy (WEP) the data is transmitted and received with a secured key.

- TKIP
  Temporal Key Integrity Protocol (TKIP) provides per-packet key mixing a message integrity check and rekeying mechanism.

- AES
  Advanced Encryption Standard (AES) provides stronger data protection using a symmetric-key encryption.

- IEEE 802.11n does not support either WEP or TKIP as an encryption method.
- To connect to your wireless network using IEEE 802.11n, we recommend selecting AES.
Encryption Methods for an Enterprise Wireless Network

An enterprise wireless network is a large network, for example using your machine in a business enterprise wireless network, with IEEE 802.1x support. If you configure your machine in an IEEE 802.1x supported wireless network, you can use the following encryption methods.

- TKIP
- AES
- CKIP

The original key Integrity Protocol for LEAP by Cisco Systems, Inc.

Gateway

A gateway is a network point that acts as an entrance to another network and sends data transmitted via the network to an exact destination. The router knows where to direct data that arrives at the gateway. If a destination is located on an external network, the router transmits data to the external network. If your network communicates with other networks, you may need to configure the Gateway IP address. If you do not know the Gateway IP address, then contact your Network Administrator.

HTTP (Web Server)

Hypertext Transfer Protocol (HTTP) is used to transmit the data between a web server and a web browser. The Brother print server is equipped with a built-in web server that allows you to monitor its status or change some of its configuration settings using a web browser.

HTTPS

HTTPS (HTTP over SSL/TLS) is the version of the Hypertext Transfer Protocol (HTTP) that uses SSL/TLS so that web content is transferred and displayed securely.

IEEE 802.1x

IEEE 802.1x is a networking authentication standard used to connect to a wired or wireless LAN. It restricts connections which are not authentic and only users authenticated by a central authority are allowed to be connected.

Infrastructure Mode

The mode of operation in a wireless network, in which all devices (machines and computers) are connected via an access point/router.

IP Address

An Internet Protocol (IP) address is a series of numbers that identifies each device connected to a network. An IP address consists of four numbers separated by dots. Each number is between 0 and 255.

Example: In a small network, you would normally change the final number.

192.168.1.1
192.168.1.2
192.168.1.3

How the IP address is assigned to your print server:
If you have a DHCP/BOOTP/RARP server in your network, the print server will automatically obtain its IP address from that server.

On smaller networks, the DHCP server may also be the Router.

If you do not have a DHCP/BOOTP/RARP server, the Automatic Private IP Addressing (APIPA) protocol will automatically assign an IP address from the range 169.254.1.0 to 169.254.254.255.

### MAC Address

The MAC Address (Ethernet Address) is a unique number assigned for the machine's network interface.

### mDNS

Multicase DNS (mDNS) allows the Brother print server to configure itself to work in an OS X Simple Network Configuration system automatically.

### NetBIOS Name Resolution

Network Basic Input/Output System (NetBIOS) name resolution enables you to obtain the IP address of the other device using its NetBIOS name during the network connection.

### Network Configuration Report

The Network Configuration Report prints a report listing the current network configuration, including the network print server settings.

### Network Connection Repair Tool

The Network Connection Repair Tool is a program Brother provides to correct the driver's settings so that they match the machine's network settings. To use the Network Connection Repair Tool, ask your network administrator.

### Network Key

The Network Key is a password, which is used when the data is encrypted or decrypted. The Network Key is also described as the Password, Security Key, or Encryption Key. The table shows the number of characters of the key to use for each setting.

#### Open system/Shared key with WEP

This key is a 64-bit or a 128-bit value that must be entered in an ASCII or hexadecimal format.

<table>
<thead>
<tr>
<th>ASCII</th>
<th>Hexadecimal</th>
</tr>
</thead>
<tbody>
<tr>
<td>64 (40) bit</td>
<td>Uses five text characters. For example, &quot;WSLAN&quot; (case-sensitive). Uses 10 digits of hexadecimal data. For example, &quot;71f2234aba&quot; (not case-sensitive).</td>
</tr>
<tr>
<td>128 (104) bit</td>
<td>Uses 13 text characters. For example, &quot;Wirelesscomms&quot; (case-sensitive). Uses 26 digits of hexadecimal data. For example, &quot;71f2234ab56cd709e5412aa2ba&quot; (not case-sensitive).</td>
</tr>
</tbody>
</table>

#### WPA-PSK/WPA2-PSK and TKIP or AES

Uses a Pre-Shared Key (PSK) that is eight or more characters in length, up to a maximum of 63 characters.

### Network Shared Printing

Network Shared Printing is a type of printing in a network shared environment. In a network shared environment, each computer sends data via a server or print server.
Node Name

The Node Name is a machine name on the network. This name is often referred to as a NetBIOS name; it will be the name that is registered by the WINS server on your network. Brother recommends the name "BRNxxxxxxxxxxx" for a wired network or "BRWxxxxxxxxxxxx" for a wireless network (where "xxxxxxxxxxxx" is your machine’s MAC address / ethernet address.)

Open System

Open System is one of the network authentication methods. Under open system authentication, any wireless devices are allowed to access the network without requiring a WEP key.

PEAP

Protected Extensible Authentication Protocol (PEAP) is a version of EAP method developed by Cisco Systems, Inc., Microsoft® Corporation and RSA Security. PEAP creates an encrypted Secure Sockets Layer (SSL)/Transport Layer Security (TLS) tunnel between a client and an authentication server, for sending a user ID and password. PEAP provides mutual authentication between the server and the client.

The Brother machine supports the following inner authentications:

• PEAP/MS-CHAPv2
• PEAP/GTC

Peer-to-Peer

Peer-to-Peer is a type of printing in a peer-to-peer environment. In a peer-to-peer environment, each computer sends and receives data directly to and from each device. There is no central server controlling access or machine sharing.

Protocols

Protocols are the standardised sets of rules for transmitting data on a network. Protocols allow users to gain access to network-connected resources. The print server used on your Brother machine supports the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol.

Public Key Cryptosystem

A Public Key Cryptosystem is a modern branch of cryptography in which the algorithms employ a pair of keys (a public key and a private key) and use a different component of the pair for different steps of the algorithm.

RARP

Reverse Address Resolution Protocol (RARP) finds the logical address for a machine that knows only its physical address.

To use RARP, contact your network administrator.

Resolution

The number of vertical and horizontal lines per inch.
Secure Function Lock 3.0

Secure Function Lock 3.0 increases security by restricting the use of functions.

Settings Tables

At-a-glance instructions that show all the settings and options that are available for setting up your machine.

Shared Key Cryptosystem

A Shared Key Cryptosystem is a branch of cryptography involving algorithms that use the same key for two different steps of the algorithm (such as encryption and decryption).

SMTP Client

Simple Mail Transfer Protocol (SMTP) client is used to send emails via the Internet or Intranet.

SMTP over SSL

SMTP over SSL feature enables sending encrypted email using SSL.

SMTP-AUTH

SMTP Authentication (SMTP-AUTH) expands SMTP (the Internet email sending protocol) to include an authentication method that ensures the true identity of the sender is known.

SNMP

The Simple Network Management Protocol (SNMP) is used to manage network devices including computers, routers and Brother network-ready machines. The Brother print server supports SNMPv1, SNMPv2c and SNMPv3.

SNMPv3

Simple Network Management Protocol version 3 (SNMPv3) provides user authentication and data encryption to manage network devices securely.

SNTP

The Simple Network Time Protocol (SNTP) is used to synchronize computer clocks on a TCP/IP network. You can configure the SNTP settings using Web Based Management.

SSID

Each wireless network has its own unique network name and it is technically referred to as a Service Set Identifier (SSID). The SSID is a 32-byte or less value and is assigned to the access point. The wireless network devices you want to associate to the wireless network should match the access point. The access point and wireless network devices regularly send wireless packets (referred to as beacons), which contain the SSID.
information. When your wireless network device receives a beacon, you can identify the wireless network that is close enough for the radio waves to reach your device.

**SSL/TLS**

Secure Socket Layer (SSL) or Transport Layer Security (TLS) is an effective method of protecting data that is sent over a local or wide area network. SSL/TLS works by encrypting data, such as a print job, sent over a network, so anyone trying to capture it will not be able to read it. SSL/TLS can be configured on both wired and wireless networks and will work with other forms of security including WPA keys and firewalls.

**Status Monitor**

The Status Monitor utility is a configurable utility to monitor the status of one or more devices, allowing you to get immediate notification when there is a problem, for example, when the machine runs out of paper or jams.

**Store Print Log to Network**

The Store Print Log to Network feature allows you to save the print log file from your Brother machine to a network server using CIFS.

**Subnet Mask**

A subnet mask allows you to identify which part of an IP address is used as the network address and which part is used as the host address.

In the following example, the last segment of the IP address is known as the host address and the first three segments are the network address.

Example: Computer 1 can talk to Computer 2
- Computer 1
  - IP Address: 192.168.1.2
  - Subnet Mask: 255.255.255.0
- Computer 2
  - IP Address: 192.168.1.3
  - Subnet Mask: 255.255.255.0

0 denotes that there is no limit to communication at this part of the address.

**TCP/IP**

Transmission Control Protocol/Internet Protocol (TCP/IP) is the most popular set of protocols used for communication, such as Internet and email. This protocol can be used in almost all operating systems, including Windows®, Windows Server®, OS X and Linux®.

**TELNET**

The TELNET protocol allows you to control the remote network devices on a TCP/IP network from your computer.
TKIP

Temporal Key Integrity Protocol (TKIP) is one of the encryption methods adopted by WPA™ to be used in a wireless network. TKIP provides per-packet key mixing, a message integrity check and rekeying mechanism.

Vertical Pairing

Vertical Pairing is a technology for Windows® that allows your Vertical Pairing-supported wireless machine to connect to your Infrastructure network using the PIN Method of Wi-Fi Protected Setup™ and the Web Services feature. It also enables printer driver installation from the printer icon in the Add a device screen.

Web Based Management

A standard Web Browser can be used to manage your machine using the Hyper Text Transfer Protocol (HTTP) or Hyper Text Transfer Protocol over Secure Socket Layer (HTTPS). You can perform the function listed or get the following information from a machine on your network using a web browser:

- Machine status information
- Change network settings, such as TCP/IP information
- Configure Gigabit Ethernet
- Configure Secure Function Lock 3.0
- Configure Store Print Log to Network
- Configure LDAP
- Software version information of the machine and print server
- Change network and machine configuration details

To use Web Based Management, you must use the TCP/IP protocol on your network and have a valid IP address programmed into the print server and your computer.

Web Services

The Web Services protocol enables Windows Vista®, Windows® 7, or Windows® 8 users to install the drivers used for printing by right-clicking on the machine icon in the Network folder. Web Services also lets you check the current status of the machine from your computer.

WEP

Wired Equivalent Privacy (WEP) is one of the encryption methods used in a wireless network. When using WEP, the data is transmitted and received with a secure key.

Wi-Fi Direct®

Wi-Fi Direct is one of the wireless configuration methods developed by the Wi-Fi Alliance®. This type of connection is a Wi-Fi standard that allows devices to connect with each other without a wireless access point, using secured method.
**WINS**

Windows® Internet Name Service (WINS) is an information-providing service for NetBIOS name resolution. It consolidates an IP address and a NetBIOS name that is in the local network.

**WINS Server**

Windows® Internet Name Service (WINS) Server maps IP addresses to computer names (NetBIOS names) in a Windows® network.

**WLAN Report**

The WLAN Report prints your machine’s wireless status report. If the wireless connection fails, check the error code on the printed report.

**WPA-PSK/WPA2-PSK Authentication Method**

WPA-PSK/WPA2-PSK authentication method enables a Wi-Fi Protected Access® Pre-shared key (WPA-PSK/WPA2-PSK), which enables the Brother wireless machine to associate with access points using TKIP for WPA-PSK or AES for WPA-PSK and WPA2-PSK (WPA-Personal).

**WPS**

Wi-Fi Protected Setup™ (WPS) is a standard that allows the setup of secured wireless networks. WPS was created by the Wi-Fi Alliance® in 2007.
