### Package Contents

Your monitor ships with the components shown below. Make sure that you have received all the components and contact Dell if something is missing.

**NOTE:** Some items may be optional and may not ship with your monitor. Some features or media may not be available in certain countries.

### Product Features

The **Dell S2418H/S2418HX** monitor has an active matrix, thinfilm transistor (TFT), liquid crystal display (LCD), and LED backlight. The monitor features include:

- 60.47 cm (23.8-inch) viewable area display (measured diagonally).
- 1920 x 1080 resolution with full-screen support for lower resolutions.
- Mega dynamic contrast ratio (8,000,000:1).
- Tilt capability.
- Removable stand.
- Plug and play capable if supported by your system.
- Color gamut of sRGB 99% (typical).
- Adapted “High Dynamic Range” appropriate for monitor usage.
- Supports AMD FreeSync™ technology.
- External Speaker.
- On-screen display (OSD) adjustments for easy setup and screen optimization.
- Software and documentation media includes an information file (INF), Image-color matching file (ICM), and product documentation.
- Dell display manager software (available on the disc shipped with the monitor).
- Energy saver feature for energy star compliance.
- Security-lock slot.
- Capability of switching from wide aspect to standard aspect ratio while maintaining image quality.
- BFR/PVC-Reduced (Its circuit boards are made from BFR/PVC-free laminates).
- Arsenic-free glass and mercury-free for the panel only.
- 0.5 W standby power when in the sleep mode.
- Energy gauge shows the energy level being consumed by the monitor in real time.
- Analog backlight dimming control for flicker free display.

### Electrical Specifications

**Video input signals**
- Digital video signal for each differential line
- Per differential line at 100 ohm impedance
- VGA/HDMI1.4/HDMI2.0 signal input support

**AC/DC adapter:**
- **Delta:** 100-240 VAC / 50 or 60 Hz ± 3 Hz / 1.6 A (maximum)
- **Chicony:** 100-240 VAC / 50 or 60 Hz ± 3 Hz / 1.7 A (maximum)

**Output voltage/current**
- Output: 19.5 VDC / 3.34 A

**Inrush current**
- At 115V/230V, maximum inrush current less than 150A (cold start)

</table>
Power Management Modes

If you have VESA’s DPM-compliant video card or software installed in your PC, the monitor can automatically reduce its power consumption when not in use. This is referred to as power save mode*. If the computer detects input from the keyboard, mouse, or other input devices, the monitor automatically resumes functioning. The following table shows the power consumption and signaling of this automatic power saving feature.

<table>
<thead>
<tr>
<th>VESA Modes</th>

</tr>
</tbody>
</table>

The OSD operates only in the normal operation mode. If you press any button in the active-off mode, one of the following message is displayed:

*Zero power consumption in OFF mode can only be achieved by disconnecting the AC mains cable from the monitor.

**Maximum power consumption with maximum luminance.

***Power consumption of on mode as defined in Energy Star 7.0 version.

****Total energy consumption in kWh as defined in Energy Star 7.0 version.

This document is informational only and reflects laboratory performance. Your product may perform differently, depending on the software, components and peripherals you ordered and shall have no obligation to update such information. Accordingly, the customer should not rely upon this information in making decisions about electrical tolerances or otherwise. No warranty as to accuracy or completeness is expressed or implied.

Activate the computer and the monitor to gain access to the OSD.

**NOTE:** This monitor is **ENERGY STAR**-compliant.

Plug-and-Play

You can install the monitor in any Plug-and-Play-compatible system. The monitor automatically provides the computer system with its extended display identification data (EDID) using display data channel (DDC) protocols so the computer can configure itself and optimize the monitor settings. Most monitor installations are automatic; you can select different settings if desired. For more information about changing the monitor settings, see Operating the Monitor.

LCD Monitor Quality and Pixel Policy

During the LCD monitor manufacturing process, it is not uncommon for one or more pixels to become fixed in an unchanging state which are hard to see and do not affect the display quality or usability. For more information on LCD Monitor Pixel Policy, see Dell support site at: http://www.dell.com/support/monitors.
Setting Up the Monitor

Attaching the Stand

- **NOTE:** The stand riser and stand base are detached when the monitor is shipped from the factory.
- **NOTE:** The procedure below is applicable for the default stand. If you purchased any other stand, see the documentation shipped with the stand to set it up.
- **CAUTION:** Place monitor on a flat, clean, and soft surface to avoid scratching the display panel.

To attach the monitor stand:
1. Remove the monitor protective cover and place the monitor with its front facing downward on it.
2. Align the stand bracket with the monitor groove.
3. Insert the stand bracket into monitor groove till it snaps into its place.

![Attaching the Stand](image)

Connecting Your Monitor

- **WARNING:** Before you begin any of the procedures in this section, follow the Safety Instructions.

To connect your monitor to the computer:
1. Turn off your computer.
2. Connect the VGA (Optional)/HDMI cable from your monitor to the computer.
3. Place the Speaker into monitor stand.
4. Connect the mini DIN cable of Speaker to the monitor.
5. Put cable holder of Speaker to the monitor stand.
6. Switch on your monitor.
7. Select the correct input source at Monitor OSD Menu and turn on your computer.
Connecting the VGA cable (Optional)

Connecting the HDMI cable

Setting Up Your Speaker

Identify the parts of the speaker and Setting Up Your Speaker

1. Speaker System consists of the cables connected to the system, Right side of the speaker has 2 buttons: volume + (Up) and Volume - (Down).

2. Place the monitor on a stable surface.
3 While holding the speaker above the base, insert the speaker cable through the stand slot.

4 Insert the speaker in a inclined angle onto the hollow space of stand base.

5 Ensure the speaker fully inserted and seated stably on the stand base.
6 Plug in the mini DIN cable to mini DIN connector located at the back of the Dell monitor, as shown below.

7 Insert the cable holder attached on the speaker cable into the stand slot. Adjust the cable holder position along the slot accordingly.
Organizing Your Cables

After attaching all necessary cables to your monitor and computer, (see Connecting Your Monitor for cable attachment) organize all cables as shown above.

Computer Playback Default Setting (HDMI Cable Connected)

Playback Setting

1. Right Click the speaker icon.

2. Select Playback devices.

<table>
<thead>
<tr>
<th>Open Volume Mixer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Playback devices</td>
</tr>
<tr>
<td>Recording devices</td>
</tr>
<tr>
<td>Sounds</td>
</tr>
<tr>
<td>Volume control options</td>
</tr>
</tbody>
</table>
3 Set the speaker as default playback device.

![Sound settings window]

**Speaker Volume Controls Setting**

1. **Volume +**
   - Press the Volume + button to increase volume.

![Volume + button]

2. **Volume -**
   - Press the Volume - button to decrease volume.

![Volume - button]

**NOTE:** Button feedback tone of beep to indicate a button + (volume up to 100) or a button – (volume down to 0).
Computer Volume Controls Setting

On board Audio Volume

1  Left Click the speaker icon.

2  Check that the volume bar is no mute.

3  Check that the volume bar level is not 0%, UP to increase volume and Down to decrease volume.
**Volume Balance Setting**

1. Right Click the speaker icon.

2. Select Playback devices.

3. Right Click Default Playback devices and select Properties.
4 Select Levels and click Balance.

Volume Control Options

1 Right Click the speaker icon.

2 Select Volume control options.
3 Click the box: All devices currently playing sound.

The Speaker of monitor are ready to play music
Removing the Monitor Stand

⚠️ CAUTION: To prevent scratches on the LCD screen while removing the stand, make sure that the monitor is placed on a soft, clean surface.

📝 NOTE: The procedure below is applicable for the default stand. If you purchased any other stand, see the documentation shipped with the stand to set it up.

To remove the stand:

1. Place the monitor on the cushion or thick sitting mat near the edge of table.
2. Tilt the stand downwards to access to the release latch.
3. Use a long and thin screwdriver to push the release latch.
4. While pushing the release latch, pull the stand in the arrow direction to remove the stand.
Operating the Monitor

Turning on the Monitor

Press the button to turn on the monitor.

Using the Front Panel Controls

Use the control buttons on the front of the monitor to adjust the characteristics of the image being displayed. As you use these buttons to adjust the controls, an OSD shows the numeric values of the characteristics as they change.
The following table describes the front panel buttons:

<table>
<thead>
<tr>
<th>Front-Panel Button</th>

### Auto Adjust

<table>
<thead>
<tr>
<th>Icon</th>
<th>Menu and Submenus</th>
<th>Description</th>
</tr>
</thead>
</table>

Even though your computer recognizes your monitor on startup, the **Auto Adjustment** function optimizes the display settings for use with your particular setup.

**Auto Adjustment** allows the monitor to self-adjust to the incoming video signal. After using **Auto Adjustment**, you can further tune your monitor by using the **Pixel Clock (Coarse)** and **Phase (Fine)** controls under **Display** menu.

The following dialog appears on a black screen as the monitor automatically adjusts to the current input:

```
Auto Adjustment in Progress...
```

**NOTE:** In most cases, **Auto Adjust** produces the best image for your configuration.
### Input Source

Use the **Input Source** menu to select between different video inputs that are be connected to your monitor.

- **Standard**: Default color settings. This is the default preset mode.
- **ComfortView**: Decreases the level of blue light emitted from the screen to make viewing more comfortable for your eyes.
- **Multimedia**: Ideal for multimedia applications.
- **Movie**: Loads color settings ideal for movies.
- **Movie HDR**: Loads color settings ideal for movies with HDR supporting.
- **Game**: Loads color settings ideal for most gaming applications.
- **Game HDR**: Loads color settings ideal for games with HDR supporting.
- **Warm**: Increases the color temperature. The screen appears warmer with a red/yellow tint.
- **Cool**: Decreases the color temperature. The screen appears cooler with a blue tint.
- **Custom Color**: Allows you to manually adjust the color settings. Press the ▲ and ▼ buttons to adjust the Red, Green, and Blue values and create your own preset color mode.

*HDR*: Adapted “High Dynamic Range” appropriate for monitor usage.

#Game HDR*: Not compatible with AMD FreeSync™.
## Input Color Format

Allows you to set the video input mode to:

- **RGB**: Select this option if your monitor is connected to a computer (or DVD player) using the HDMI.
- **YPbPr**: Select this option if your DVD player supports only YPbPr output.

## Reset Color

 Resets your monitor’s color settings to the factory defaults.

## Display

Use the **Display** menu to adjust image.

### Aspect Ratio

Adjust the image ratio to **Wide 16:9**, **4:3**, or **5:4**.

### Horizontal Position

Use 🖤 or 🔄 to adjust the image left or right. Minimum is ‘0’ (-). Maximum is ‘100’ (+).
<table>

</tbody>
</table>

Select this option to adjust the OSD settings, such as the **DDC/CI, LCD conditioning**, and so on.

## DDC/CI

**DDC/CI** (Display Data Channel/Command Interface) allows you to adjust the monitor settings using software on your computer.

Select **Disable** to turn off this feature.

Enable this feature for best user experience and optimum performance of your monitor.
**Icon** Menu and Submenus | **Description**
---|---
**LCD Conditioning** | Helps reduce minor cases of image retention. Depending on the degree of image retention, the program may take some time to run. Select **Enable** to start the process.

---

**Reset Others** | Restores other settings, such as **DDC/CI**, to factory defaults.

**Factory Reset** | Restores all OSD settings to the factory defaults.

---

**NOTE:** This monitor has a built-in feature to automatically calibrate the brightness to compensate for LED aging.
OSD Warning Messages

When the Dynamic Contrast feature is enabled (in these preset modes: Game or Movie), manual brightness adjustment is disabled.

When the monitor does not support a particular resolution mode, you can see the following message:

This means that the monitor cannot synchronize with the signal that it is receiving from the computer. See Monitor Specifications for the Horizontal and Vertical frequency ranges addressable by this monitor. Recommended mode is 1920 x 1080.

You can see the following message before the DDC/CI function is disabled:

When the monitor enters the Power Save mode, the following message appears:
Activate the computer and wake up the monitor to gain access to the **OSD**.

If you press any button other than the power button, the following messages will appear depending on the selected input:

- **Dell S2418H/HX**
  - ![Message](image)
  - Press any key on the keyboard or move the mouse or wake it up.
  - If there is no display, press the monitor button again to select the correct input source.

If either VGA, HDMI input is selected and the corresponding cable is not connected, a floating dialog box as shown below appears.

- **Dell S2418H/HX**
  - ![Message](image)
  - The display will go into Power Save Mode in 4 minutes.

See **Troubleshooting** for more information.
WARNING: Before you begin any of the procedures in this section, follow the Safety Instructions.

Self-Test

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

1. Turn off both your computer and the monitor.
2. Unplug the video cable from the back of the computer. To ensure proper Self-Test operation, remove all digital and the analog cables from the back of computer.
3. Turn on the monitor.

The floating dialog box should appear on-screen (against a black background), if the monitor cannot sense a video signal and is working correctly. While in self-test mode, the power LED remains white. Also, depending upon the selected input, one of the dialogs shown below will continuously scroll through the screen.

**Dell S2418H/HX**

- ![No VGA Cable]
- The display will go into Power Save Mode in 4 minutes.
  - www.dell.com/support/monitors

or

**Dell S2418H/HX**

- ![No HDMI Cable]
- The display will go into Power Save Mode in 4 minutes.
  - www.dell.com/support/monitors

4. This box also appears during normal system operation, if the video cable becomes disconnected or damaged.
5. Turn off your monitor and reconnect the video cable; then turn on both your computer and the monitor.
If your monitor screen remains blank after you use the previous procedure, check your video controller and computer, because your monitor is functioning properly.

**Built-in Diagnostics**

Your monitor has a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with your monitor, or with your computer and video card.

**NOTE:** You can run the built-in diagnostics only when the video cable is unplugged and the monitor is in self-test mode.

To run the built-in diagnostics:

1. Make sure that the screen is clean (no dust particles on the surface of the screen).
2. Unplug the video cable(s) from the back of the computer or monitor. The monitor then goes into the self-test mode.
3. Press and hold **Button 1** for 5 seconds. A gray screen appears.
4. Carefully inspect the screen for abnormalities.
5. Press **Button 1** on the front panel again. The color of the screen changes to red.
6. Inspect the display for any abnormalities.
7. Repeat steps 5 and 6 to inspect the display in green, blue, black, white, and text screens.

The test is complete when the text screen appears. To exit, press **Button 1** again.

If you do not detect any screen abnormalities upon using the built-in diagnostic tool, the monitor is functioning properly. Check the video card and computer.
Speaker Quick Troubleshooting Guide

A  Symptoms:
- Speaker has No Sound

  NOTE: mini DIN Cable should be plugged into mini DIN connector of Dell Monitor.
  NOTE: OSD audio input source setting is properly selected.

Troubleshooting Guide:
1  Checking for mini DIN cable and speaker set-up.
   i  Check the mini DIN plug pins are not damaged.
   ii Check if the speaker is properly set-up. Proceed to Setting Up your Speaker.

2  The Speaker is connected to the Dell Monitor but no sound is coming out. Go to the Link Playback Default Setting.
   i  Make sure that the audio source player is playing music.
   ii Check the computer volume and media player volume level is at desirable level and not muted. Go to the Link Volume Controls Setting.
   iii Check the playback default setting on the computer, and ensure the default device is set.

3  Audio source playing music but no sound is coming out of the speakers.
   i  Press the Volume + button to increase the volume.
   ii Check that the computer volume is not 0% by doing the following steps Volume Controls Setting.
   i  Click the speaker icon.
   ii Adjust the volume level on the volume bar.

4  Set the Volume control options by doing the following steps. Volume Controls Setting.
   i  Right click the speaker icon.
   ii Select the volume control options.
   iii Click the box: All devices currently playing sound.

B  Symptom:
- Abnormal Sound (Distorted or Buzzing)

Troubleshooting Guide:
1  Abnormal sound coming out of the speaker. Go to the Link Setting Up your Speaker.
   i  Ensure that the mini DIN jack is properly inserted or not loose.
   ii Unplug and plug the mini DIN cable to make sure it is fully seated.
iii  Try to adjust the volume level Up and Down. Go to the Link Volume Controls Setting.
iv  Observe if the abnormal noise will change along side with the volume level.
v  Check if the speaker is properly seated on the monitor stand.

C  Symptom:
- Low sound output level

Troubleshooting Guide:
1  Audio source volume level is high. Go to the Link Volume Controls Setting.
   i  Press the Volume + button to increase the volume.

D  Symptom:
- Unbalanced sound from the speakers

Troubleshooting Guide:
Check the computer Volume Balance setting by doing the following steps: Volume Controls Setting.
   i  Right Click the speaker icon.
   ii  Select Playback devices.
   iii  Right Click Default Playback devices and select Properties.
   iv  Select Levels and click Balance. The L and R value must be the same.
# Common Problems

The following table contains general information about common monitor problems you might encounter and the possible solutions:

<table>
<thead>
<tr>
<th>Common Symptoms</th>
<th>What You Experience</th>
<th>Possible Solutions</th>
</tr>
</thead>
</table>
| No Video/Power        | No picture          | • Ensure that the video cable connecting the monitor and the computer is properly connected and secure.  
| LED off               |                     | • Verify that the power outlet is functioning properly using any other electrical equipment.  
|                       |                     | • Ensure that the power button is depressed fully.  
|                       |                     | • Ensure that the correct input source is selected in the Input Source menu.          |
| No Video/Power        | No picture or no    | • Increase brightness & contrast controls via OSD.  
| LED on                | brightness          | • Perform monitor self-test feature check.  
|                       |                     | • Check for bent or broken pins in the video cable connector.  
|                       |                     | • Run the built-in diagnostics.  
|                       |                     | • Ensure that the correct input source is selected in the Input Source menu.          |
| Missing Pixels        | LCD screen has      | • Cycle power on-off.  
|                       | spots               | • Pixel that is permanently off is a natural defect that can occur in LCD technology.  
|                       |                     | • For more information on Dell Monitor Quality and Pixel Policy, see Dell Support site at: http://www.dell.com/support/monitors. |
| Stuck-on Pixels       | LCD screen has      | • Cycle power On-Off.  
|                       | bright spots        | • Pixel that is permanently off is a natural defect that can occur in LCD technology.  
|                       |                     | • For more information on Dell Monitor Quality and Pixel Policy, see Dell Support site at: http://www.dell.com/support/monitors. |
| Brightness Problems   | Picture too dim     | • Reset the monitor to factory settings.  
|                       | or too bright       | • Adjust brightness & contrast controls via OSD.                                     |
| Safety Related        | Visible signs of    | • Do not perform any troubleshooting steps.  
| Issues                | smoke or sparks     | • Contact Dell immediately.                                                          |
| Intermittent Problems | Monitor malfunctions | • Ensure that the video cable connecting the monitor to the computer is connected properly and is secure.  
|                       | on & off            | • Reset the monitor to factory settings.  
|                       |                     | • Perform monitor self-test feature check to determine if the intermittent problem occurs in self-test mode. |
### Common Symptoms

<table>
<thead>
<tr>
<th>What You Experience</th>
<th>Possible Solutions</th>
</tr>
</thead>
</table>
| Missing Color Picture missing color | • Perform monitor self-test.  
• Ensure that the video cable connecting the monitor to the computer is connected properly and is secure.  
• Check for bent or broken pins in the video cable connector. |
| Wrong Color Picture color not good | • Change the settings of the Preset Modes in the Color menu OSD depending on the application.  
• Adjust R/G/B value under Custom. Color in Color menu OSD.  
• Change the Input Color Format to PC RGB or YPbPr in the Color menu OSD.  
• Run the built-in diagnostics. |
| Image retention from a static image left on the monitor for a long period of time Faint shadow from the static image displayed appears on the screen | • Use the Power Management feature to turn off the monitor at all times when not in use (for more information, see Power Management Modes).  
• Alternatively, use a dynamically changing screensaver. |

### Product Specific Problems

<table>
<thead>
<tr>
<th>What You Experience</th>
<th>Possible Solutions</th>
</tr>
</thead>
</table>
| Screen image is too small Image is centered on screen, but does not fill entire viewing area | • Check the Aspect Ratio setting in the Display menu OSD.  
• Reset the monitor to factory settings. |
| Cannot adjust the monitor with the buttons on the front panel OSD does not appear on the screen | • Turn off the monitor, unplug the monitor power cable, plug it back, and then turn on the monitor.  
• Check whether the OSD menu is locked. If yes, press and hold the button beside the power button for 6 seconds to unlock (for more information, see Lock). |
| No Input Signal when user controls are pressed No picture, the LED light is white | • Check the signal source. Ensure the computer is not in the power saving mode by moving the mouse or pressing any key on the keyboard.  
• Check whether the signal cable is plugged in properly. Re-plug the signal cable if necessary.  
• Reset the computer or video player. |
| The picture does not fill the entire screen | • Due to different video formats (aspect ratio) of DVDs, the monitor may display in full screen.  
• Run the built-in diagnostics. |
Safety Instructions
For displays with glossy bezels the user should consider the placement of the display as the bezel may cause disturbing reflections from surrounding light and bright surfaces.

⚠️ WARNING: Use of controls, adjustments, or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards, and/or mechanical hazards.

For information on safety instructions, see the Safety, Environmental, and Regulatory Information (SERI).

FCC Notices (U.S. only) and Other Regulatory Information

For FCC notices and other regulatory information, see the regulatory compliance website located at www.dell.com/regulatory_compliance.

Contacting Dell

⚠️ NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area.

To get online Monitor support content:

See www.dell.com/support/monitors.

To contact Dell for sales, technical support, or customer service issues:

1. Go to www.dell.com/support.
2. Verify your country or region in the Choose A Country/Region drop-down menu at the top-left corner of the page.
3. Click Contact Us next to the country dropdown.
4. Select the appropriate service or support link based on your need.
5. Choose the method of contacting Dell that is convenient for you.
Setting Up Your Monitor

NOTE: The maximum input resolution to **3840 x 2160** while you select movie HDR or game HDR in Color on OSD functions can be supported.

Setting Display Resolution to **1920 x 1080**

For best performance, set the display resolution to **1920 x 1080** pixels by performing the following steps:

**In Windows Vista, Windows 7, Windows 8 or Windows 8.1:**
1. For Windows 8 or Windows 8.1 only, select the Desktop tile to switch to classic desktop.
2. Right-click on the desktop and click **Screen Resolution**.
3. Click the Dropdown list of the Screen Resolution and select **1920 x 1080**.
4. Click **OK**.

**In Windows 10:**
1. Right-click on the desktop and click **Display Settings**.
2. Click **Advanced display settings**.
3. Click the dropdown list of **Resolution** and select **1920 x 1080**.
4. Click **Apply**.

If you do not see the recommended resolution as an option, you may need to update your graphics driver. Please choose the scenario below that best describes the computer system you are using, and follow the given steps.

**Dell computer**
1. Go to [www.dell.com/support](http://www.dell.com/support), enter your service tag, and download the latest driver for your graphics card.
2. After installing the drivers for your graphics adapter, attempt to set the resolution to **1920 x 1080** again.

NOTE: If you are unable to set the resolution to **1920 x 1080**, please contact Dell to inquire about a graphics adapter that supports these resolutions.
Non-Dell computer

In Windows Vista, Windows 7, Windows 8 or Windows 8.1:

1. For Windows 8 or Windows 8.1 only, select the Desktop tile to switch to classic desktop.
2. Right-click on the desktop and click Personalization.
3. Click Change Display Settings.
4. Click Advanced Settings.
5. Identify your graphics controller supplier from the description at the top of the window (e.g. NVIDIA, ATI, Intel etc.).
6. Refer to the graphic card provider website for updated driver (for example, http://www.ATI.com or http://www.NVIDIA.com).
7. After installing the drivers for your graphics adapter, attempt to set the resolution to **1920 x 1080** again.

In Windows 10:

1. Right-click on the desktop and click Display Settings.
2. Click Advanced display settings.
3. Click Display adapter properties.
4. Identify your graphics controller supplier from the description at the top of the window (e.g. NVIDIA, ATI, Intel etc.).
5. Refer to the graphic card provider website for updated driver (for example, http://www.ATI.com or http://www.NVIDIA.com).
6. After installing the drivers for your graphics adapter, attempt to set the resolution to 1920 x 1080 again.

**NOTE:** If you are unable to set the recommended resolution, please contact the manufacturer of your computer or consider purchasing a graphics adapter that supports the video resolution.
Maintenance Guidelines

Cleaning Your Monitor

⚠️ WARNING: Before cleaning the monitor, unplug the monitor power cable from the electrical outlet.
⚠️ CAUTION: Read and follow the Safety Instructions before cleaning the monitor.

For best practices, follow these instructions in the list below while unpacking, cleaning, or handling your monitor:

- To clean your anti-static screen, lightly dampen a soft, clean cloth with water. If possible, use a special screen-cleaning tissue or solution suitable for the anti-static coating. Do not use benzene, thinner, ammonia, abrasive cleaners, or compressed air.
- Use a lightly-dampened, soft cloth to clean the monitor. Avoid using detergent of any kind as some detergents leave a milky film on the monitor.
- If you notice white powder when you unpack your monitor, wipe it off with a cloth.
- Handle your monitor with care as a darker-colored monitor may get scratched and show white scuff marks more than a lighter-colored monitor.
- To help maintain the best image quality on your monitor, use a dynamically changing screen saver and turn off your monitor when not in use.
