RICOH Interactive Whiteboards with the Windows® 10-based Controller
D5520, D6510 and D8400

- Remotely collaborate with laptops and mobile devices
- No external computer required
- Brilliant HD and 4K multi-touch screens (55” – 84”)
- Available video-conferencing services
Work smarter in groups

Empower your onsite and remote workers, clients or customers to become more engaged in real-time collaboration and meetings with our Interactive Whiteboards (IWBs) with Windows® 10-based Controllers. Our Windows® controller lets you use your preferred apps and cloud solutions including Office 365™ and Skype® for Business. Select from three models of IWBs—also known as Interactive Flat Panel Displays or IFPDs—with screen resolutions and sizes of HD 55” (D5520), HD 65” (D6510) and 4K 84” (D8400). Bundle the IFPDs with our visual communication hardware, apps, cloud services and business services for all-in-one solutions that can fully meet your business needs. Now, convert any area into a modern collaborative space where you can brainstorm ideas faster, conveniently manage complex projects and training, and transform presentations into interactive experiences with touchscreen annotations, video communications and information sharing.

Maximize engagement

Showcase important graphics or documents, and convey your ideas clearly in crisp 1920 x 1080 HD resolution—or brilliant 3840 x 2160 4K resolution that includes 10-bit processing of more than one billion colors. This helps your participants notice precise details and see lifelike quality. The anti-glare touchscreen with LED backlighting and deep contrast help to ensure that participants can see what is on the screen in almost any lighting conditions. Use the IFPDs with their embedded controller to present, or use the IFPDs as displays only and connect via VGA, HDMI, DVI-D or DisplayPort. The 10-point touchscreen allows you to easily switch between tasks and make natural drawings and handwritten annotations, zoom in and zoom out, and undo changes with your fingers.

Collaborate across your network

Whether your group is small or includes hundreds of participants, you can find the most effective and cost-efficient way to scale real-time collaboration on our IFPDs. If you choose to stay on your private network, you can add a collaborative license to our IWB Lt. software. This lets you connect with two-way collaboration with up to 19 additional IFPDs. Each licensed IFPD can connect to as many as 50 endpoints (laptops and mobile devices) also with real-time, two-way collaboration. That means that you could distribute 20 licensed IFPDs on your network and interactively collaborate with up to 1,000 participants without adding an additional public cloud service fee. You can use the public cloud to collaborate and project manage via Skype® for Business, Google Hangouts®, Join.Me®, JIRA® and more solutions.

Get started in a snap

Our IFPDs with Windows®-based controllers are ready out-of-box solutions. There’s no need to connect the IFPDs to a dedicated computer to operate the display, or use expensive proprietary software with recurring maintenance fees. And with their highly intuitive user experience, you can conveniently deploy the IFPDs at locations with limited or no IT support. You can also connect the IFPDs to Ricoh digital projectors to present and interactively collaborate with large groups. Bundle the IFPDs with our mobile stand to easily move them about your workplace.
Easy to use

Interact face-to-face
You can better engage remote participants when you can see their facial expressions and body communication. That’s why we offer optional videoconferencing hardware and software for our IFPDs to help you clearly communicate your ideas and get more work done faster. With our Windows®-based controller, you can decide whether to use the Ricoh UCS or UCS Advanced Service, or use Skype® for Business and other popular collaboration apps. Our optional UCS Service enables you to collaborate with large numbers of remote participants in many different locations. And because our UCS Service takes up no more than 2 MBps, you don’t have to worry about interruptions due to limited bandwidth or slow network speeds. If you want to help ensure that you can start web or video conferences without delays, use the RICOH® UCS Service Advanced, an open WebRTC solution, to let your remote participants painlessly join presentations or collaborate with you from any online mobile device, laptop or legacy videoconferencing equipment.

Simplify your configuration
Our IFPDs with Windows®-based controllers are built from the ground up for modern collaboration, rather than assembled from multiple pieces, such as when a mini PC is simply mounted onto a touchscreen monitor. Mounted mini PCs are at increased risk of being stolen, and may also interrupt consistent performance, since they require video cables for connectivity—rather than the more reliable bus connections that link our embedded Windows®-based controller directly to its touchscreen display. Our completely integrated solution also helps you scale seamlessly. Add more of our IFPDs to your network without worrying about incurring more fees for ongoing IT maintenance including updating of third-party management software.

Get the most from your investment
For more than 80 years, we have helped enterprises maximize the ROI of their IT investments. As you take the journey to transform your workspace for today’s faster, more collaborative work styles, we want to partner with you step by step. Benefit from our expertise and 24/7 global customer support, so you can focus on competing in a smarter, faster business world. Let us focus on keeping your collaboration technology ahead of trends and providing the services to help you thrive in the information economy. And we believe that relationships matter: Wherever you deploy our IFPDs, our extensive network and optional business services will be there to help you reach your goals.
